Check that the sound source for the selected headset channel and the headsets are on. Sound that is sent from left screen is always channel A in the headphones, and sound that is sent from right screen is always channel B in the headphones.

Checking the infra-red transmitter/head restraint and infra-red receiver/headsets

Check that the infra-red transmitter/head restraint is not obstructed. In certain cases moisture can impair infra-red signal reception.

Also check that the receiver in the headsets is not obstructed.

Check that the IR-diodes at the bottom on the screen light up dimly when the system is on and that there is a sound source. If the IR-diodes are not lit up, the system will play some form of media, the circuit board in the head restraint is probably damaged.

Checking the headsets

Check the headset batteries.

Check to, see if the other headset functions. If this is the case the headsets are defective.

Checking audio leads for screen

Check if the malfunction only is at one screen or if the malfunction is present at both screens. If the problem only occurs at one screen - change place between both headrests and, see if the problem comes along.

Check that it is only the wireless headphones that do not work. If there is no sound from the vehicle's ordinary loudspeakers, the fault may be in the rear seat entertainment module (RSE). Before replacing the control module, ensure that all other relevant symptom tests have been carried out.

Check that the connector between Rear seat entertainment module (RSE) and both screens is installed correctly and that it is not damaged.

Check the leads for audio signals from Rear seat entertainment module (RSE) to respective screen. There are three audio leads for each screen, one for left audio channel, one for right audio channel and a ground connection which is common for both audio channels. Regards the cables from rear seat entertainment module (RSE), terminals #E6, #E7 and #E8 for left display screen as well as terminals #E18, #E19 and #E20 for right display screen.

Conclusion

- If no problem can be found on the cables to the screens and it is only from one screen that sound cannot be played, but sound from Rear seat entertainment module (RSE) can be listened to from other places - try changing circuit board in the head restraint where the sound does not work.
- If no malfunction can be found on the leads to the screens, none of the screens can give sound to the headphones but sound from Rear seat entertainment module (RSE) can be heard from other places - try replacing Rear seat entertainment module (RSE).
- If sound is not heard from the front audio system or in the wireless headsets, there may be a fault in the Rear Seat Entertainment Module (RSE).

Remedy as necessary.

Other information:

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING WIRELESS HEADPHONES. REAR SEAT ENTERTAINMENT, GENERATION 4.3 (2009-2011)

CHECKING WIRELESS HEADPHONES

FAULT-TRACING INFORMATION

The wireless headsets can be used for both display screens. The sound to the headsets is transferred from the display screens, via infrared signals (IR), to the headsets in two channel stereo format. If the headsets do not function the fault could be due to:

- The headsets (Infra-red receiver in the headsets)
- Headset batteries discharged.
- Blocked path for infrared signals to the headsets.
- Damaged IR-transmitter/head rest.
- Leads between Rear seat entertainment module (RSE) and screens are damaged.

NOTE: **In order for sound from the system for rear seat entertainment to be heard in the headsets, the system for rear seat entertainment must be on and work faultlessly.**

Fig. 75: Identifying Wireless Headphones
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- **Continue**

  Refer to **CHECKING THE HEADSETS**

CHECKING THE HEADSETS

HINT: To obtain a certain audio source - insert a CD in the DVD-player, press the Play button, and select DVD as source on the screen where troubleshooting is to be performed.

Checking the settings

Check that the volume on each headset is turned down.

Check that the sound source for the selected headset channel and the headsets are on. Sound that is sent from left screen is always channel A in the headphones, and sound that is sent from right screen is always channel B in the headphones.

Checking the infra-red transmitter/head restraint and infra-red receiver/headsets

Check that the infra-red transmitter/head restraint is not obstructed. In certain cases moisture can impair infra-red signal reception.

Also check that the receiver in the headsets is not obstructed.

Check that the IR-diodes at the bottom on the screen light up dimly when the system is on and that there is a sound source. If the IR-diodes are not lit up, the system will play some form of media, the circuit board in the head restraint is probably damaged.

Checking the headsets

Check the headset batteries.

Check to, see if the other headset functions. If this is the case the headsets are defective.

Checking audio leads for screen

Check if the malfunction only is at one screen or if the malfunction is present at both screens. If the problem only occurs at one screen - change place between both headrests and, see if the problem comes along.

Check that it is only the wireless headphones that do not work. If there is no sound from the vehicle's ordinary loudspeakers, the fault may be in the rear seat entertainment module (RSE). Before replacing the control module, ensure that all other relevant symptom tests have been carried out.

Check that the connector between Rear seat entertainment module (RSE) and both screens is installed correctly and that it is not damaged.

Check the leads for audio signals from Rear seat entertainment module (RSE) to respective screen. There are three audio leads for each screen, one for left audio channel, one for right audio channel and a ground connection which is common for both audio channels. Regards the cables from rear seat entertainment module (RSE), terminals #E6, #E7 and #E8 for left display screen as well as terminals #E18, #E19 and #E20 for right display screen.

Conclusion

- If no problem can be found on the cables to the screens and it is only from one screen that sound cannot be played, but sound from Rear seat entertainment module (RSE) can be listened to from other places - try changing circuit board in the head restraint where the sound does not work.
- If no malfunction can be found on the leads to the screens, none of the screens can give sound to the headphones but sound from Rear seat entertainment module (RSE) can be heard from other places - try replacing Rear seat entertainment module (RSE).

- If sound is not heard from the front audio system or in the wireless headsets, there may be a fault in the Rear Seat Entertainment Module (RSE). Before replacing the control module, ensure that all other relevant symptom tests have been carried out.

Remedy as necessary.

FAULT TRACING OF THE ROOF MOUNTED SYSTEM FOR REAR SEAT ENTERTAINMENT (2008-2011)

FAULT TRACING OF THE ROOF MOUNTED SYSTEM FOR REAR SEAT ENTERTAINMENT

FAULT-TRACING INFORMATION

Fault tracing of ceiling-mounted rear seat entertainment system is described.

Troubleshoot acc. to:**DIAGNOSTIC FUNCTIONS**

GENERATION IDENTIFICATION OF SYSTEM FOR REAR SEAT ENTERTAINMENT (2009-2011)

GENERATION IDENTIFICATION OF SYSTEM FOR REAR SEAT ENTERTAINMENT

FAULT-TRACING INFORMATION

There are several different generations of systems for rear seat entertainment. The generations have different constructions and have different functions. For certain models, several generations can be under one and the same model year. Fault tracing for the various generations can vary.

As several generations are under the same model year, it is important to first identify the generation of the vehicle to be able to then select correct fault tracing.

For information on generations, see:**IDENTIFICATION OF GENERATION**

Secure the existing cable **Use:** Strip clamp, 983747

Secure the cable on the cable harness. **Use:** Cable harness, 30786841

INSTALL

To install, reverse the removal procedure.

PROBLEMS WITH SOUND QUALITY (2007-2008)

PROBLEMS WITH SOUND QUALITY

FAULT-TRACING INFORMATION

This applies to the following vehicles:

- XC90, structure week 200620 - 200748.

The audio system, Premium Sound, may have problems with sound quality at loud volumes. To improve audio quality a new software has been developed with improved settings for equalizer, high-pass filter, and amplification.

- Update software in Infotainment control module (ICM).

- Update the software in the Audio module (AUD) if the vehicle's structure week is earlier than 200724.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault must now be detected and remedied. As this is not the case, troubleshooting has failed.

Exit symptom troubleshooting or try again.

Do you want to exit symptom troubleshooting?

- **YES**

  FAULT TRACING FAILED: The fault should have been detected and remedied. As this is not the case fault-tracing has failed. Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

- **NO**

CHECK THE SIM CARD HOLDER IN THE VEHICLE WITH BLUETOOTH PHONE MODULE (BPM). (2011)

CHECK THE SIM CARD HOLDER IN THE VEHICLE WITH BLUETOOTH PHONE MODULE (BPM).

CHECK THE SIM CARD HOLDER IN THE VEHICLE WITH BLUETOOTH PHONE MODULE (BPM).

Fault-tracing information

Vehicles with Bluetooth phone module (BPM) are also equipped with a SIM card holder and reader at the right keypad, despite the car not having Phone Module (PHM).

Action

NOTE: Do not replace any parts

Inform the customer that the SIM card holder and the reader are not working.

Fault symptom

Audio other/Other audio problems

Cellular phone/Other cellular phone problems

Buttons/control knobs on center console (Media, communication and navigation)/No/reduced/incorrect function

Fig. 85: View Of Buttons/Control Knobs On Centre Console
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

CHECKING BLUETOOTH PHONE MODULE (BPM) (2011)

CHECKING BLUETOOTH PHONE MODULE (BPM)

CHECKING FUNCTIONS

Bluetooth phone module (BPM) communicates with the mobile telephone via bluetooth protocol. Mobile telephones have many different built-in functions, that is why all functions are not available for all mobile telephones.

Compare the functions of the connected mobile phone with the list.

Fig. 86: Identifying Bluetooth Phone Module (BPM)
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Do the functions match the list?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING SOFTWARE**

CHECKING SOFTWARE

Functions of the Bluetooth phone module (BPM) may depend on which software is loaded in the control module. To ensure that the latest software is used, load Bluetooth phone module (BPM) with new software. Check the function and compare with the list of functions.

If it still differs, this may be due to that the mobile phone's software or mobile phone supplier not matching those used in the test.

Fig. 87: Identifying Bluetooth Phone Module (BPM)
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

CHECKING COMMUNICATION, BLUETOOTH PHONE MODULE (BPM) (2011)

CHECKING COMMUNICATION, BLUETOOTH PHONE MODULE (BPM)

CHECKING COMMUNICATION, BLUETOOTH PHONE MODULE (BPM)

Fault-tracing information

Communication between the Bluetooth phone module (BPM) and mobile telephone can suddenly be interrupted. An audible signal is heard for about 2 seconds before the symbols for Bluetooth and signal strength disappear.

If the audio system is not in "telephone mode" the symbols for Bluetooth and signal strength disappear without warning and incoming calls are connected directly to the mobile telephone.

It is possible to manually connect the mobile telephone with the Bluetooth phone module (BPM). If the audio system is in "telephone mode" communication is established again as soon as Enter is pressed.

Action

Go to the tab software and program the control module with the latest software.

Fault symptom

Cellular phone/Handsfree does not work

Cellular phone/Does not work

Cellular phone/Other cellular phone problems

Cellular phone/Keypad on center console does not work

Cellular phone/Steering wheel cellular phone controls do not work

Has the fault been remedied?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING COMPATIBILITY BETWEEN MOBILE TELEPHONE AND HANDSFREE SYSTEM WITH BLUETOOTH (ACCESSORY). (2003-2011)

CHECKING COMPATIBILITY BETWEEN MOBILE TELEPHONE AND HANDSFREE SYSTEM WITH BLUETOOTH (ACCESSORY).

FAULT-TRACING INFORMATION

In case of problem with compatibility between the mobile telephone and handsfree system with bluetooth (accessory), a software update may solve the problem.

NOTE: Does not apply to all handsfree systems with bluetooth (accessory).

Reason for upgrading handsfree system with bluetooth (accessory):

- The customer has purchased a new mobile telephone that does not work together with handsfree systems with bluetooth (accessory), (it has worked with the earlier mobile telephone). Check that the new mobile telephone is compatible with handsfree system with bluetooth (accessory) according to TIE TJ 19168.
- The customer states that it is only possible to dial the 9 first items in the telephone book.
- The customer wants to add language choices Russian or Portuguese in handsfree system with bluetooth (accessory).
- The customer wants to transfer new contacts from his/her mobile telephone to the phone book in the handsfree system with bluetooth (accessory).

Before taking any actions, check if it is possible to update the software in the handsfree system with bluetooth (accessory) by following the instructions according to TIE TJ 19168.

Fault symptom

- Cellular phone/Other cellular phone problems
- Cellular phone/Voice control does not work

CHECKING HANDS-FREE AND HANDSET MODE

CHECKING HANDS-FREE AND HANDSET MODE (2006-2011)

FAULT-TRACING INFORMATION

Fig. 90: Identifying Ignition Position 1
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

The phone module (PHM) determines whether the call should be connected via hands-free or the handset based on the hook signal of the handset. If the handset is in its holder (i. e. "on the hook"), all calls are connected via hands-free. The handset is activated when it is removed from its holder.

Check that the handset is properly positioned in its holder.

- Ignition in position 1.
- Telephone call connected.

Switch between handset and hands-free mode via the menu in the display.

Do both handset and hands-free mode work?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING THE TELEPHONE HOLDER MAGNET**

CHECKING THE TELEPHONE HOLDER MAGNET

The handset houses a detector that is actuated by the magnetic field from the telephone holder magnet. It closes or opens a circuit depending on whether the handset is in or out of the holder.

Check the hook signals by connecting adapter cable see **9511463** and measuring box see **9511428** to the phone module.

Handset on: U = 1.9 V.

Handset off: U = 3.34 V.

Open circuit: U = 5 V.

If the correct voltage level value is not obtained when the handset is hung up, check the magnet as follows:

- Lift up the handset.
- Pull a paperclip across the magnet (marked with an arrow in the illustration) in the holder.
- If there is a strong reaction, the magnet is functional.
- If there is no reaction, replace the holder with magnet.

If the function check is successful the fault has been remedied.

Other information:

- see **MICROPHONE, REPLACING**
- see **SIGNAL SPECIFICATION**

Fig. 91: Identifying Telephone Holder Magnet
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING THE CONNECTORS**

CHECKING THE CONNECTORS

With functioning magnet but still lost function of the handset, try checking the connectors for the handset.

- Check that the connector (1) for the secrecy handset in the center console is connected.
- Check that the cable terminals of the connector have not retracted and that they are in the locked position.

With correctly connected connector but still lost function of the handset, try with another handset.

If this handset works, replace with a new handset.

If there is no function, replace the holder with magnet.

Other information:

- see **HANDSET, REPLACING**

Fig. 92: View Of Telephone Holder Magnet Connectors
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  FAULT NOT FOUND: Troubleshooting has been completed.

VERIFICATION

Fig. 93: Checking Traffic Load On CAN Cables
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Fig. 94: Identifying Connector(s) Reinstallation
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

HINT: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Reinstall the connectors, components etc.
- Ignition on.
- Switch on the carphone.

Make a call so that both the handset and the hands-free system are used.

CHECKING HANDS-FREE AND HANDSET MODE (2003-2005)

FAULT-TRACING INFORMATION

Fig. 95: Identifying Ignition Position 1
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

The phone module (PHM) determines whether the call should be connected via hands-free or the handset based

on the hook signal of the handset. If the handset is in its holder (i. e. "on the hook"), all calls are connected via hands-free. The handset is activated when it is removed from its holder.

Check that the handset is properly positioned in its holder.

- Ignition in position 1.
- Telephone call connected.

Switch between handset and hands-free mode via the menu in the display.

Do both handset and hands-free mode work?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING THE TELEPHONE HOLDER MAGNET**

CHECKING THE TELEPHONE HOLDER MAGNET

The handset houses a detector that is actuated by the magnetic field from the telephone holder magnet. It closes or opens a circuit depending on whether the handset is in or out of the holder.

Check the hook signals by connecting adapter cable see **9511463** and measuring box see **9511428** to the phone module.

Handset on: U = 1.9 V.

Handset off: U = 3.34 V.

Open circuit: U = 5 V.

If the correct voltage level value is not obtained when the handset is hung up, check the magnet as follows:

- Lift up the handset.
- Pull a paperclip across the magnet (marked with an arrow in the illustration) in the holder.
- If there is a strong reaction, the magnet is functional.
- If there is no reaction, replace the holder with magnet.

If the function check is successful the fault has been remedied.

HINT: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Reinstall the connectors, components etc.
- Ignition on.
- Switch on the carphone.

Make a call so that both the handset and the hands-free system are used.

CHECKING INCOMPLETE SYNCHRONIZATION OF TELEPHONE BOOK VIA THE BLUETOOTH PHONE MODULE (BPM) (2011)

CHECKING INCOMPLETE SYNCHRONIZATION OF TELEPHONE BOOK VIA THE BLUETOOTH PHONE MODULE (BPM)

CHECKING INCOMPLETE SYNCHRONIZATION OF TELEPHONE BOOK VIA THE BLUETOOTH PHONE MODULE (BPM)

Fault-tracing information

The customer experiences problems with synchronizing the telephone book or the calls list between certain mobile telephones and the Bluetooth phone module (BPM).

The Bluetooth phone module (BPM) can handle a maximum of 750 telephone numbers per synchronized mobile telephone.

Action

Go to the tab software and program the control module with the latest software.

Test synchronizing the telephone book between the mobile telephone and the Bluetooth phone module (BPM) to verify the results.

If the problem persists, check the number of received, missed or made calls in the calls lists. The telephone book cannot be synchronized if call lists transfer takes longer than 20 seconds. Erase calls from the calls lists for a better result.

Fault symptom

Cellular phone/Handsfree does not work

Cellular phone/Does not work

Cellular phone/Other cellular phone problems

Bluetooth/Phonebook synchronization problems

Has the fault been remedied?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING MENU NAVIGATION (2003-2011)

CHECKING MENU NAVIGATION

CHECKING THE ADDRESS BOOK

Doubles in the address book may make it seem like menu navigation in the address book does not work. This problem may arise if the user has copied the entire address book on the SIM card more than once.

Check that there are doubles/triples in the address book by removing the SIM-card and inserting it in a mobile phone.

Remedy as necessary.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **FAULT-TRACING INFORMATION**

FAULT-TRACING INFORMATION

If the user feels menu navigation is slow, the following information should be observed/provided to create a better understanding of telephone system characteristics.

- When temperatures are low, the display is more sluggish and menu navigation is slower than usual.
- Menu navigation via the steering wheel buttons is a bit slower than when using the Infotainment control module (ICM) buttons.
- In some cases, it may take up to 3-4 minutes to copy the address book. The message "Please wait" appears during this time. Copying time varies based on the number of items in the user address book.
- When started, the phone module (PHM) loads the address book from the SIM card. During this time, the user does not have access to the address book.

CHECKING MOBILE APPLICATIONS (2011)

CHECKING MOBILE APPLICATIONS

FAULT-TRACING INFORMATION

Fig. 101: Identifying Ignition OFF
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Mobile applications use Volvo On call to communicate with the vehicle.

NOTE: This fault tracing only applies to vehicles with Volvo On Call subscriptions.

CHECKING RADIO MUTE, ACCESSORY (2003-2011)

CHECKING RADIO MUTE, ACCESSORY

FAULT-TRACING INFORMATION

Fault causes which will prevent the radio mute function working:

- Fault or loose connections in the cable between the telephone and the handsfree box
- Fault in the connection between the handsfree box and the accessory electronic module (AEM).

- **Continue**

  Refer to **CHECKING THE COMPONENTS AND WIRING**

CHECKING THE COMPONENTS AND WIRING

HINT: Check that no diagnostic trouble codes (DTCs) have been stored in the accessory electronic module (AEM) or in the MOST network before carrying out this fault-tracing.

Fig. 102: Identifying Ignition OFF
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition off
- Disconnect the connectors for the handsfree box and accessory electronic module (AEM).

  Check that the telephone connections on the phone and in the holder are clean. Check that the connector guards are in not place.

  Check the connectors. Check for loose connections. Check for contact resistance and oxidation. Check the female and male sections of the connectors. The terminals must not be damaged or pressed in.

  Check the cable between the phone and handsfree box. Check for an open-circuit.

  Check the cable between the handsfree box and the accessory electronic module (AEM). Check for an open-circuit.

  Other information

  - see **SIGNAL SPECIFICATION**
  - see **CHECKING WIRING AND TERMINALS**

Fig. 103: Accessory Electronic Module Ground Terminals

Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 105: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on.

  Check that radio mute is functioning.

Is the function OK?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING RECEPTION/COVERAGE (2003-2011)

CHECKING RECEPTION/COVERAGE (2006-2011)

FAULT-TRACING INFORMATION

If the customer feels the system functions poorly only at specific instances/locations, there may be poor local reception/coverage.

Compare the difference in sound quality between the hands-free and handset functions. If sound quality is significantly better in hands-free mode, test with an unmounted handset for comparison.

If sound quality is the same in both modes, there may be poor local reception/coverage.

Other information:

- see **PHONE MODULE (PHM), REPLACING (2006-2010)**

CHECKING RECEPTION/COVERAGE (2003-2005)

FAULT-TRACING INFORMATION

If the customer feels the system functions poorly only at specific instances/locations, there may be poor local reception/coverage.

Compare the difference in sound quality between the hands-free and handset functions. If sound quality is significantly better in hands-free mode, test with an unmounted handset for comparison.

If sound quality is the same in both modes, there may be poor local reception/coverage.

Other information:

- see **PHONE MODULE (PHM), REPLACING**

CHECKING SIM-CARD READER (2005)

CHECKING SIM-CARD READER

CHECKING STRUCTURE WEEK

Fig. 106: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on

  Read out the vehicle's structure week by clicking on the symbol for VCT2000.

  1. Vehicles with structure week up to and incl. 200445, that is, year 2004 week 45. Refer to **CHECKING THE SIM CARD READER**
  2. Vehicles with structure week from and incl. 200446, that is, year 2004 week 46. Refer to **CHECKING COMPONENTS AND WIRING**

Fig. 107: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

CHECKING COMPONENTS AND WIRING

Check the cable between connector B to phone module (PHM) and the SIM-card reader's connector for open circuit.

Check between:

- control module's connector B#1 (#21) and SIM-card reader's connector #1.
- control module's connector B#2 (#22) and SIM-card reader's connector #2.
- control module's connector B#3 (#3) and SIM-card reader's connector #3.
- control module's connector B#4 (#4) and SIM-card reader's connector #4.
- control module's connector B#5 (#5) and SIM-card reader's connector #5.
- control module's connector B#6 (#6) and SIM-card reader's connector #6.

Check the connectors for loose connections, damaged or bent pins as well as oxidation.

If no malfunction was found on the cable, try replacing the SIM-card reader.

Remedy as necessary.

Other information:

- see **CONNECTING THE BREAKOUT BOX**
- see **SIGNAL SPECIFICATION**
- see **LOCATION OF COMPONENTS**
- see **PHONE MODULE (PHM), REPLACING**
- see **HANDSET, REPLACING**
- see **CONTENTS**

Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Fig. 109: Identifying Ohm Meter
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

CHECKING THE SIM CARD READER

CHECKING THE COMPONENT AND WIRING

If there is a open-circuit or short-circuit in the wiring, faulty SIM card reader or connector, the phone module (PHM) will not be able to communicate with the SIM card. The user will be asked to insert a SIM card even though there is already a card in the reader.

Checking the connectors, wiring and components

Try a different SIM card to check whether the problem is with that particular card.

Disconnect connector A at the phone module (PHM) and the connector for the SIM card reader. Check the

wiring. Check for an open-circuit by taking readings between:

- control module connector A terminal #9 (#9) and SIM card reader connector terminal #1
- control module connector A terminal #8 (#8) and SIM card reader connector terminal #2
- control module connector A terminal #7 (#7) and SIM card reader connector terminal #3
- control module connector A terminal #19 (#19) and SIM card reader connector terminal #5.

Check the wiring in the cable harness. Check for a short-circuit to each other.

Check the wiring in the cable harness. Check for a short-circuit to ground.

Check the connectors for loose connections, damaged or bent terminal pins and oxidation.

Other information:

- To access the phone module (PHM), see **PHONE MODULE (PHM), REPLACING**
- To access or replace the SIM card reader, see **INFOTAINMENT CONTROL MODULE (ICM), REPLACING**
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- see **CONTENTS** .

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE COMPONENT AND WIRING**

CHECKING SOFTWARE (ECHO) (2003-2005)

CHECKING SOFTWARE (ECHO)

FAULT-TRACING INFORMATION

Problems with echoing with the other caller, outside the car, can occur when using handsfree. The echo can vary in magnitude and can vary in frequency. Interference and different clicking noises can also occur.

This can be remedied by upgrading the software. Order and download software in the following control modules:

1. New software for the GSM module. Download to the phone module (PHM). This software is not included when reloading the phone module (PHM).

   NOTE: **If the software download to the GSM module is interrupted, the phone module (PHM will not function afterwards. It is important that a battery charger with sufficient capacity is connected during download. Do not cancel the downloads for any reason.**

2. New software upgrade for the phone module (PHM). (This software is also included when reloading the phone module (PHM)).
3. New software upgrade for the infotainment control module (ICM). (This software is also included when reloading the infotainment control module (ICM)).
4. New software upgrade for the audio control module (AUD). (This software is also included when reloading the audio control module (AUD)).

NOTE: **It is extremely important that all four software downloads are downloaded for each control module at the same time and in the correct order. After the software has been downloaded into the vehicle, the new sound parameters must be updated in the phone module (PHM). This is carried out by turning the ignition key to position 0 and waiting 10 seconds. Then turn the ignition key to position II.**

Check that the latest available software for the control modules is downloaded into the vehicle by trying to purchase an "upgrade" for the relevant control module.

If an "upgrade" is available, continue to download the software according to the routine.

If an "upgrade" is not available, this can mean that the latest software is already installed in the vehicle. To find out why a purchase was declined, highlight the row for the relevant software purchase and click "Details". If the software purchase is void with trouble code 134, the software is already installed in the vehicle.

NOTE: **The corrective action above does not replace the electrical fault-tracings which are connected to the symptom.**

After checking the software, it is important to carry out a function check to verify that the problem has been remedied.

CHECKING SOFTWARE, PHONE MODULE (PHM) (2003-2011)

CHECKING SOFTWARE, PHONE MODULE (PHM)

Check that the latest available software for the phone module (PHM) is downloaded into the vehicle by purchasing an "upgrade" for the relevant control module.

If an "upgrade" is available, continue to download the software according to the routine.

If an "upgrade" is not available this could mean that the latest available software has already been installed in the vehicle. In order to find out why purchase was not permitted, mark the line for the relevant software purchase and click on "Details".

NOTE: **The corrective action above does not replace the electrical fault-tracings which are connected to the symptom.**

After checking the software, it is important to carry out a function check to verify that the problem has been remedied.

HINT: If the customer experiences problems with the Phone Module not switching back to the home network after a trip abroad, new software must be installed. The problem is based in, which is a function that not all networks support. The problem is solved in the software released 200722.

Select "Continue" to exit.

- **Continue**

  OKAY: Troubleshooting has been completed.

CHECKING SUBSCRIPTION AND SIM-CARD READER (2003-2011)

CHECKING THE SUBSCRIPTION AND SIM CARD READER

FAULT-TRACING INFORMATION

Fig. 113: Identifying Ignition OFF
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Phone module (PHM) has a SIM-card reader for the customer's private telephone subscription. The SIM-card reader is located in the keypad for Infotainment control module (ICM). Sometimes the thickness of different network operators' SIM-cards may vary, which may result in the contact faces on the SIM-card not having contact with the SIM-card reader's contact in Phone module (PHM). This may be the cause of calls being cut off and that the telephone returns to basic mode.

If the customer has a "twin card", an extra SIM card connected to the existing subscription, a comparison between the function of the cards must be carried out.

If the customer experiences reduced function at certain specific occasions/places, this can be due to poor local reception/coverage.

In cases where the customer has a subscription which does not work on more than one frequency, this can be a

cause for the poor reception/coverage.

Check:

- that the mating surface of the SIM card is clean and that there are no dents in the mating surface
- that the SIM card is in the correct card holder
- the SIM card reader. Check for damage. Check for bent connectors
- the function using another SIM card/subscription.

CHECKING THE ANTENNA CABLE, ACCESSORY (2003-2011)

CHECKING THE ANTENNA CABLE, ACCESSORY

FAULT-TRACING INFORMATION

Fault causes which could result in poor antenna reception:

- Incorrect positioning of the antenna cable
- Fault or loose connections in the cable between the handsfree box and the antenna
- The antenna is not properly connected.

- **Continue**

  Refer to **CHECKING THE COMPONENTS AND WIRING**

CHECKING THE COMPONENTS AND WIRING

Fig. 114: Identifying Ignition OFF
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition off
- Disconnect the connector for the antenna cable.

  Check the connector for the antenna cable. Check for loose connections. Check for contact resistance and oxidation.

  Check the antenna cable. Check that the cable harness is not trapped.

  Take readings between the antenna signal cable and signal ground. Check for a short-circuit to ground.

  NOTE: The resistance must not be 0 ohms or infinite. The resistance must be approximately 50 ohms.

Take readings between the signal ground and chassis ground. Check for a short-circuit to ground.

Other information

- see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

  Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 116: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on.

  Check that the antenna is working by using the telephone.

Is the function OK?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE CARPHONE ANTENNA (2003-2011)

CHECKING THE CARPHONE ANTENNA (2003-2005)

CHECKING THE COMPONENT

HINT: If there is an extra antenna available, use it for a comparative test by connecting it to the phone module (PHM) or the A-post connector.

NOTE: The antenna must be pointing forward, immediately under the existing antenna.

Checking the connectors and cables

Disconnect the connector at the phone module (PHM) and take readings at the connector in the A-post between:

- screen and ground
- signal and ground
- screen and signal.

The resistance must be infinite. Replace the cable if the resistance is not infinite.

Measure the voltage from the connector in the A-post between screen and ground. The voltage must be 0 V. Replace the antenna cable if the voltage is not 0 V.

Check that the cable terminals in the connector at the phone module (PHM) and in the A-post are securely crimped. Remedy or replace if damaged.

Other information:

- see **ANTENNA CARPHONE, REPLACING**
- see **PHONE MODULE (PHM), REPLACING**
- see **CHECKING WIRING AND TERMINALS**

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING THE CONNECTORS AND WIRING**

CHECKING THE CONNECTORS AND WIRING

Raise the secondary lock on the connector in the right A-pillar.

Loosen the primary lock and remove the insulator.

Carefully remove the antenna from the headlining.

Measure the resistance between the signal line and screen ground on the connector. The resistance must be approximately 0 ohms.

Measure the resistance between screen ground and ground. The resistance must be infinite.

Carefully remove the three screws that hold the antenna's circuit board.

Carefully lift up the circuit board from the mounting point so that there is no contact between the circuit board and the casing.

Measure the resistance between the signal line and screen ground. The resistance must be infinite. If the resistance is infinite there is a short-circuit between the signal line and screen ground.

Remedy as necessary.

Erase any diagnostic trouble codes (DTCs) after fault-tracing.

Perform a function check.

If the check succeeds, the malfunction has been fixed.

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE CARPHONE HANDSET (2003-2004)

CHECKING THE CARPHONE HANDSET

CHECKING COMPONENTS AND WIRING

The carphone handset will not function in the event of an open-circuit or short-circuit in the wiring, of a defective handset or faulty connectors. This means that the user will only be able to use the handsfree function.

Checking the connectors and cables

Check the power supply cable between phone module (PHM) connector terminal #11 (#53) and handset connector terminal #5 (#25). Check for an open-circuit.

Check the ground cable between phone module (PHM) connector terminal #B6 (#48) and handset connector terminal #3 (#23). Check for an open-circuit, for a short-circuit to ground and a short-circuit to supply voltage.

Check the connectors for loose connections, damaged or bent terminal pins and oxidation.

Try replacing the carphone handset if no fault is found.

Other information:

- To access the phone module (PHM), see **PHONE MODULE (PHM), REPLACING**
- To access or replace the handset, see **HANDSET, REPLACING**
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- For information about signals and connectors, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

CHECKING THE CRADLE SIGNAL (2003-2005)

CHECKING THE CRADLE SIGNAL

TROUBLESHOOTING INFORMATION

The phone module (PHM) decides if the call is to be connected via handsfree or the handset based on the cradle signal. When the handset is placed in its holder, all voice calls are routed via handsfree. The handset is activated when it is removed from the holder. The cradle signal to the phone module (PHM) is controlled by a magneto switch located in the handset. The switch is closed by a permanent magnet located in the holder. The magnet on XC90 is embedded in the plastic holder. When the handset is placed in the holder, the cradle signal to the phone module (PHM) is 0 V, if the handset is used the signal is 5 V.

The handsfree will not work if there is no signal from the cradle. If there are intermittent malfunctions, calls may be disconnected when handsfree is in use.

Causes of lost function may be:

- The permanent magnet in the holder demagnetized.
- Defective magneto switch in the handset.

- **Continue**

  Refer to **CHECKING THE MAGNET AND SWITCH**

CHECKING THE MAGNET AND SWITCH

Fig. 137: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on.

  Check the function of the cradle by measuring the signal at the handset connector. Take readings with the handset in and removed from the holder.

  Checking the permanent magnet

  If the correct cradle signal value is not obtained when the handset is on the cradle, check the cradle function as follows:

  - Lift off the handset
  - Run a metal object over the magnet (paper clip or similar)

Checking the switch

Check the switch in the handset using a magnet. Hold the magnet in the marked area in the illustration. Check that the cradle signal changes. Also check that the switch is working (closes) when the magnet is a couple of centimeters from the handset.

Remedy as necessary.

Other information:

CHECKING THE HANDSFREE, ACCESSORY (2003-2011)

CHECKING THE HANDSFREE, ACCESSORY

FAULT-TRACING INFORMATION

Fault causes which will stop handsfree equipment working:

- Poor connection between the telephone and telephone holder
- The customer mobile phone is not set up for handsfree mode
- Fault in one of the power supply cables
- Defective fuse in one of the power supply cables
- Damaged loudspeaker(s) in the car
- The microphone switch is not properly connected
- Fault in the cable to the microphone
- Damaged microphone
- Fault or loose connection in the terminal for the handsfree box to the 15-supply.

- **Continue**

  Refer to **CHECKING THE POWER SUPPLY AND GROUND TERMINAL**

CHECKING THE POWER SUPPLY AND GROUND TERMINAL

Fig. 141: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition off
- Disconnect the connector for the handsfree box
- Ignition on.

Check the connector. Check for loose connections. Check for contact resistance and oxidation. Check the female and male sections of the connector. The terminals must not be damaged or pressed in.

Checking the 15-supply

The 15-supply controls autostart of the phone. With the ignition on, the voltage must be approximately 12 V. When the ignition is off the voltage must be 0 V.

Check the 15-supply. Take readings between terminals #5 and #1 on the handsfree box. If the voltage is not approximately 12 V, check between terminals #5 and #1. Check for a short-circuit to ground.

Checking the 30-supply

Check the 30-supply. Take readings between terminals #2 and #1 on the handsfree box. The voltage must be approximately 12 V. If the voltage is not approximately 12 V between terminals #2 and #1 on the handsfree box check for a short-circuit to ground.

Remedy as necessary.

Other information:

- see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

- **Continue**

Refer to **CHECKING CONTACTS AND TELEPHONE SETTINGS**

CHECKING CONTACTS AND TELEPHONE SETTINGS

Check that the telephone connections on the phone and in the holder are clean. Check that the connector guards are in not place.

NOTE: Depending on the mobile phone, it may need to be set to handsfree mode.

- **Continue**

Refer to **CHECKING THE LOUDSPEAKERS AND MICROPHONE**

CHECKING THE LOUDSPEAKERS AND MICROPHONE

HINT: The sound from the handsfree box is always routed out through the passenger loudspeaker.

Fig. 143: Identifying Ignition OFF
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition off
- Disconnect the connectors for the handsfree box and microphone.

  Check the connectors. Check for loose connections. Check for contact resistance and oxidation. Check the female and male sections of the connectors. The terminals must not be damaged or pressed in.

  HINT: If the microphone cable is positioned too close to the phone, the network signals may disrupt

sound reproduction. Check that the microphone cable is correctly installed.

Checking the loudspeaker

Check that the loudspeaker on the passenger side is working by listening to the audio equipment.

Check the wiring between terminal #7 on the handsfree box and the audio module (AUD/AUM). Also check the wiring between terminal #4 on the handsfree box and the audio module (AUD/AUM). Check for an open-circuit. Check for a short-circuit to supply voltage.

Checking the microphone

Check that the microphone connectors are correctly pressed in.

Check the microphone cable. Check for a short-circuit to ground. Check for an open-circuit.

If there is a loose microphone, try to connect it.

Other information:

- see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

CHECKING THE POWER SUPPLY (2003-2005)

CHECKING THE COMPONENTS AND WIRING

Check that the fuse for the Phone module (PHM) is intact.

Measure voltage between A5(#5) and A6(#6) in connector A. The voltage must be approximately 12 V.

Remedy as necessary.

Other information:

- see **CONNECTING THE BREAKOUT BOX**
- see **SIGNAL SPECIFICATION**
- see **PHONE MODULE (PHM), REPLACING**

CHECKING THE PROGRAMMED VIN (2003-2011)

CHECKING THE PROGRAMMED VIN

CHECKING THE PROGRAMMED VIN IN THE PHONE MODULE (PHM)

Fig. 146: Checking Traffic Load On CAN Cables
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on.

  The VIN for the vehicle is programmed in phone modules (PHM) with Volvo On Call functionality. The VIN is transmitted every time a Volvo On Call service is started, together with the relevant vehicle data to the Volvo On Call Service Center. The VIN is used by the Volvo On Call Service Center to identify the customer.

  If an incorrect VIN is programmed in the phone module (PHM), the Volvo On Call Service Center will not be able to identify the customer.

  The VIN is also used when the activating/deactivating a Volvo On Call subscription for the customer. A code is entered via the keypad. If an incorrect VIN is programmed in the phone module (PHM), the Volvo On Call function cannot be activated/deactivated. The correct VIN must be programmed in order for the code to work.

  Check that the VIN that is programmed in the phone module (PHM) corresponds to the vehicle VIN by clicking on the VCT2000 symbol.

  Fig. 147: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
  Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Is the VIN correct?

- **YES**

  FAULT NOT FOUND: Troubleshooting has been completed.

- **NO**

Refer to **PROGRAMMING THE VIN, PHONE MODULE (PHM)**

PROGRAMMING THE VIN, PHONE MODULE (PHM)

Fig. 148: Checking Traffic Load On CAN Cables
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on.

  Program the correct VIN in the phone module (PHM) by clicking on the VCT2000 symbol.

Fig. 149: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- **Continue**

  Refer to **SYMPTOM VERIFICATION**

SYMPTOM VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 150: Checking Traffic Load On CAN Cables
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Fig. 151: Identifying Connector(s) Reinstallation
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition off.
- Reinstall the connectors, components etc.
- Ignition on.

Check that correct VIN-code is programmed in Phone module (PHM) by clicking on the symbol for VCT2000.

Fig. 152: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Is the VIN-code correct?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  FAULT TRACING FAILED: The fault should have been detected and remedied. As this is not the case fault-tracing has failed. Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE SIM CARD READER (2003-2004)

CHECKING THE SIM CARD READER

CHECKING THE COMPONENT AND WIRING

If there is a open-circuit or short-circuit in the wiring, faulty SIM card reader or connector, the phone module (PHM) will not be able to communicate with the SIM card. The user will be asked to insert a SIM card even though there is already a card in the reader.

Checking the connectors, wiring and components

Try a different SIM card to check whether the problem is with that particular card.

Disconnect connector A at the phone module (PHM) and the connector for the SIM card reader. Check the wiring. Check for an open-circuit by taking readings between:

- control module connector A terminal #9 (#9) and SIM card reader connector terminal #1
- control module connector A terminal #8 (#8) and SIM card reader connector terminal #2
- control module connector A terminal #7 (#7) and SIM card reader connector terminal #3
- control module connector A terminal #19 (#19) and SIM card reader connector terminal #5.

Check the wiring in the cable harness. Check for a short-circuit to each other.

Check the wiring in the cable harness. Check for a short-circuit to ground.

Check the connectors for loose connections, damaged or bent terminal pins and oxidation.

Other information:

- To access the phone module (PHM), see **PHONE MODULE (PHM), REPLACING**
- To access or replace the SIM card reader, see **INFOTAINMENT CONTROL MODULE (ICM), REPLACING**
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- see **CONTENTS** .

Fig. 154: Identifying Ohm Meter
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Fig. 155: Breakout Box
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE COMPONENT AND WIRING**

CHECKING THE SOUND, BLUETOOTH PHONE MODULE (BPM) (2011)

CHECKING THE SOUND, BLUETOOTH PHONE MODULE (BPM)

Fault-tracing information

Always check that the microphone and attaching hooks are placed correctly.

HINT: It is recommended to replace the roof module seal if the sound quality from the microphone is experienced as poor, especially with calls on the mainland between the vehicle and a standard GSM telephone and/or between two vehicles.

New software was released in Structure week 200815 for the Bluetooth phone module (BPM), to improve the sound quality. Update the software in the event of sound problems.

We recommend switching to a ceiling-mounted microphone acc. to TIE TJ-20473 in instances where there is still a problem with the microphone sound quality after fitting the new seal and updating the software.

First check that the customer accepts this solution.

Fault symptom

Cellular phone/Handsfree does not work

Cellular phone/Other party cannot hear/Handsfree

Cellular phone/Other cellular phone problems

Cellular phone/Other party cannot hear/Unsure when/at all times

Other information

see **MICROPHONE TELEPHONE (2010)**

Fig. 156: Identifying Bluetooth Phone Module (BPM)
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Has the fault been remedied?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING RADIO RECEPTION (2003-2006)

CHECKING RADIO RECEPTION

ACTIVATING/READING OUT COMPONENTS/FUNCTIONS

CONDITIONS

CAUTION: Reference values from a vehicle (XC90) with good radio reception shall be used as comparison when reading out. Read out from a vehicle (XC90) with good radio reception.

- **Park the vehicle outdoors in a position with good radio reception.**
- **Search through the whole frequency range and save all readout values. Then these saved values shall be used as reference values.**
- **Make an exact note of the vehicle's position and direction.**

When reading out from vehicles for troubleshooting:

- **Park this vehicle in exactly the same position and in the same direction as the vehicle from which the reference values were obtained.**
- **When reading out, compare the readout values from the vehicle in question and the reference values.**

FM-band:

Select 1 to read out which antenna is active as well as signal strength and noise level for the FM-band.

Select 2 to enable manual activation of the desired antenna as well as read out signal strength and noise level for the FM-band.

AM-band:

Select 3 to read out signal strength for the AM-band.

Select an alternative.

- **1**

  Refer to **READING OUT COMPONENTS/FUNCTIONS, FM**

- **2**

Refer to **ACTIVATING AND READING OUT COMPONENTS/FUNCTIONS, FM**

- **3**

Refer to **READING OUT COMPONENTS/FUNCTIONS, AM**

READING OUT COMPONENTS/FUNCTIONS, FM

READING OUT COMPONENTS AND FUNCTIONS

CAUTION: Reference values from a vehicle (XC90) with good radio reception shall be used as comparison when reading out. Read out from a vehicle (XC90) with good radio reception.

- **Park the vehicle outdoors in a position with good radio reception.**
- **Search through the whole frequency range and read out from all radio stations found with automatic search. Note and save all readout values. Then these saved values shall be used as reference values.**
- **Make an exact note of the vehicle's position and direction.**

When reading out from vehicles for troubleshooting:

- **Park this vehicle in exactly the same position and in the same direction as the vehicle from which the reference values were obtained.**
- **When reading out, compare the readout values from the vehicle in question and the reference values.**

Fig. 157: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on
- Engine running or battery charger on.
- Radio on.

Activate readout of components by clicking on the symbol for VCT2000.

Search through the whole frequency range and perform a read out from all radio stations found with automatic search.

When reading out, it is checked which antenna is active as well as signal strength and noise level for the antenna in question.

The comparison for deviations from reference values shall be performed on the readouts from stations that have a signal strength below 175.

If the signal strength deviates more than approx. 30 from the reference values:

- Go back in the troubleshooting and select alternative 2 to enable manual activation of the desired antenna as well as read out signal strength and noise level.

Other information

- see **DESCRIPTION OF READOUTS, FM** .
- To access/replace antenna module (ATM):**RECEIVER AM/FM (ATM), REPLACING** .
- see **COMPONENT DESCRIPTION, ANTENNA FLEX CONDUCTOR**
- see **CONTENTS**

Fig. 158: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

COMMUNICATION FAULT

Communication has been interrupted for one of the following reasons:

- The ignition is switched off

- VCT2000 disconnected from the data link connector (DLC)
- VCT2000 disconnected from the VIDA cart
- Communication problems in VIDA application or in car.
- No voltage in the data link connector (DLC).

Check therefore:

- That the control module power supply and ground terminal are fault-free.
- That the fuse for the data link connector (DLC) is intact.
- that the ignition is on
- that the battery voltage (system voltage) is normal (approximately 12 V).

  If necessary a battery charger can be connected during the test.

  For information about charge currents and the battery, see:**BATTERY, CHARGING**

- that VCT2000 is correctly connected to the VIDA cart and the data link connector (DLC)
- that VCT2000 and the wiring is fault-free.

Other information

Try to establish communication again or exit reading off diagnostic trouble codes (DTCs). Depending on the communication fault, select one of the following options.

1. Try again. Refer to **READING OUT COMPONENTS AND FUNCTIONS**
2. Fault-trace more comprehensively for the communication problem that has occurred. Refer to **CHECKING COMMUNICATION ERRORS**
3. Exit fault-tracing / Read off from the next system.

Fig. 159: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

CHECKING COMMUNICATION ERRORS

SELECTING CAR MODEL

Select car model to obtain relevant troubleshooting information.

Select one of the following model alternatives

1. XC90. Refer to **CHECKING COMMUNICATION ERRORS, CAR MODEL XC90**

CHECKING COMMUNICATION ERRORS, CAR MODEL

HINT: Test the communication with another corresponding vehicle to decide if the malfunction is in the vehicle or in VIDA/VCT/cable harness. If the communication works on another vehicle, the malfunction is in the vehicle.

Different speed on the CAN-communication can lead to problems

Volvo's vehicles have different speed of communication on the high-speed part of the CAN-network (HS-CAN), depending on model year.

- Model year -2004 communicates with 250 kbit/s.
- Model year 2005- communicates with 500 kbit/s.

Due to this, it is very important to specify correct vehicle profile before any communication is started with the vehicle's HS-CAN. This is normally done by pressing on " Retrieve VIN" or by manually specifying vehicle parameters under "Vehicle profile".

If the wrong model year has been selected, it may lead to blocking of the CAN-net, diagnostic trouble codes being stored in several control modules or missing response from control modules at continued communication. The following control modules may be affected by this problem:

- Brake control module (BCM)/(ABS)
- Engine control module (ECM)
- Electronic Throttle Module (ETM)
- Suspension Module (SUM)
- Central electronic module (CEM)
- Transmission control module (TCM)
- Steering wheel angle sensor module (SAS)
- Steering Wheel Module (SWM)
- Electrical Power Steering Module (EPS)

If this happens, take the following action:

- Turn off the ignition and remove the ignition key. Insert the key again in position II.
- If the above does not work, remove the battery cable and connect it again after a minute to reset the control modules.
- Select the correct vehicle profile in VIDA and erase the diagnostic trouble codes. Check that the symptoms have disappeared.

Diagnostic outlet

- Check the voltage feed to diagnostic outlet #16. The voltage shall match battery voltage.
- Check the cable for power ground and signal ground to diagnostic outlet #4 and #5.

HINT: When VCT2000 is connected to the diagnostic outlet (is supplied with voltage), the indicator diode shall be activated with a green light. Then the indicator diode flashes quickly when communication takes place with a control module. In case of certain internal malfunctions on VCT2000 the indicator diode is activated with a red light.

Communication cables

- Check the communication cable (k-line) between diagnostic outlet #7 and central electronic module (CEM) #D6 and other connected control modules for open circuit, short-circuit to ground and short-circuit to voltage.

CAUTION: In case of malfunction on this communication cable, communication cannot be established on either the low or high-speed network. First when communication takes place on this cable, the low and high-speed cables between the diagnostic outlet and central electronic module (CEM) are connected to the rest of the network in the vehicle. This is controlled via a relay in the central electronic module (CEM). This relay is only found on vehicles of model year -2004.

- For communication problems with control units on **the high-speed network** , check communication cables between diagnostic outlet #6/ #14 and central electronic module (CEM) #B7/ #B8 for open circuit, short-circuit to ground and short-circuit to voltage according to references above.
- For communication problems with control units on **the low-speed network** , check communication cables between diagnostic outlet #3/#11 and central electronic module (CEM) #B19/#B20 for open circuit, short-circuit to ground and short-circuit to voltage according to references above.
- Also check the communication cables for the low and high-speed net between the central electronic module (CEM) and the other connected control modules according to troubleshooting above.

Control modules

- Check that the control module's voltage feed and ground connection are trouble-free.

CAUTION: If none of the above checks help, try reading out diagnostic trouble codes in the central electronic module (CEM). Done via VIDA vehicle communication. A prerequisite for being able to communicate with the control modules in the car is that the central electronic module (CEM) is active and can be communicated with. If communication is not possible with the central electronic module (CEM), check the voltage feed and ground for the central electronic module (CEM).

VCT2000 and cable harness

- Connect VCT2000 to the vehicle so that it is supplied with voltage. Test VCT2000 by selecting the system's self-test and VCT Test in the VIDA main menu. If any malfunction is found according to the test, first replace the cable harness then the VCT2000, if the test still indicates a malfunction.
- If no malfunctions were found after troubleshooting according to above, try with a new cable harness and/or new VCT2000.

VIDA

- If no malfunctions were found after troubleshooting according to above, try performing a complete system reset of VIDA (Volvo scan tool).

Other information

- see **CONTENTS**

  Refer to **FAULT-TRACING INFORMATION**

FAULT-TRACING INFORMATION

Fault-tracing communication problems is now finished.

Do you want to try establishing communication again?

- **YES**

  Refer to **READING OUT COMPONENTS AND FUNCTIONS**

- **NO**

  NO

ACTIVATING AND READING OUT COMPONENTS/FUNCTIONS, FM

ACTIVATING AND READING OUT COMPONENTS

CAUTION: Reference values from a vehicle (XC90) with good radio reception shall be used as comparison when reading out. Read out from a vehicle (XC90) with good radio reception.

- **Park the vehicle outdoors in a position with good radio reception.**
- **Search through the whole frequency range and read out from all radio stations found with automatic search. Read out signal strength**

and noise level for both main antenna and sub-antenna. Note and save all readout values. Then these saved values shall be used as reference values.

- **Make an exact note of the vehicle's position and direction.**

When reading out from vehicles for troubleshooting:

- **Park this vehicle in exactly the same position and in the same direction as the vehicle from which the reference values were obtained.**
- **When reading out, compare the readout values from the vehicle in question and the reference values.**

Fig. 161: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on
- Engine running or battery charger on.
- Radio on.

Activate readout and activation of components/functions by clicking on the symbol for VCT2000.

Search through the whole frequency range and read out from all radio stations found with automatic search. Read out signal strength and noise level for both main antenna and sub-antenna.

When reading out, the signal strength and noise level are checked for the active antenna.

The most accurate comparison for deviations from reference values are performed on the readouts from stations that have a signal strength below 175.

If the signal strength deviates more than approx. 30 from the reference values:

- Check cables and connections for open circuit and contact resistance.
- Check the antenna flex conductor for open circuit on the antenna that deviates most from reference values.

Remedy as necessary.

If no malfunction was found, report the result of troubleshooting to the sales company/importer according to normal report procedure.

Other information

- see **DESCRIPTION OF ACTIVATIONS AND READOUTS, FM**

  Refer to **COMMUNICATION FAULT**

- 0

  Refer to **COMMUNICATION FAULT**

READING OUT COMPONENTS/FUNCTIONS, AM

READING OUT COMPONENTS AND FUNCTIONS

CAUTION: Reference values from a vehicle (XC90) with good radio reception shall be used as comparison when reading out. Read out from a vehicle (XC90) with good radio reception.

- **Park the vehicle outdoors in a position with good radio reception.**
- **Search through the whole frequency range and read out from all radio stations found with automatic search. Note and save all readout values. Then these saved values shall be used as reference values.**
- **Make an exact note of the vehicle's position and direction.**

When reading out from vehicles for troubleshooting:

- **Park this vehicle in exactly the same position and in the same direction as the vehicle from which the reference values were obtained.**
- **When reading out, compare the readout values from the vehicle in question and the reference values.**

When reading out from the AM-band the signal strength may vary depending on at what time the readout is performed.

Fig. 163: Identifying Ignition ON
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

- Ignition on
- Engine running or battery charger on.
- Radio on.

Activate readout of components by clicking on the symbol for VCT2000.

Search through the whole frequency range and perform a read out from all radio stations found with automatic search.

When reading out, the signal strength of the selected radio station is checked.

The most accurate comparison for deviations from reference values are performed on the readouts from

stations that have a signal strength below 145.

If the signal strength deviates more than approx. 25 from the reference values:

- Check cables and connections for open circuit and contact resistance.
- Check the antenna flex conductor for open circuit on the AM-antenna.

Remedy as necessary.

If no malfunction was found, report the result of troubleshooting to the sales company/importer according to normal report procedure.

Other information

- see **DESCRIPTION OF READOUTS, AM**
- To access/replace antenna module (ATM):**RECEIVER AM/FM (ATM), REPLACING** .

CHECKING COMMUNICATION ERRORS

SELECTING CAR MODEL

Select car model to obtain relevant troubleshooting information.

1. XC90. Refer to **CHECKING COMMUNICATION ERRORS, CAR MODEL XC90**

CHECKING COMMUNICATION ERRORS, CAR MODEL

HINT: Test the communication with another corresponding vehicle to decide if the malfunction is in the vehicle or in VIDA/VCT/cable harness. If the communication works on another vehicle, the malfunction is in the vehicle.

Different speed on the CAN-communication can lead to problems

Volvo's vehicles have different speed of communication on the high-speed part of the CAN-network (HS-CAN), depending on model year.

- Model year -2004 communicates with 250 kbit/s.
- Model year 2005- communicates with 500 kbit/s.

Due to this, it is very important to specify correct vehicle profile before any communication is started with the vehicle's HS-CAN. This is normally done by pressing on " Retrieve VIN" or by manually specifying vehicle parameters under "Vehicle profile".

If the wrong model year has been selected, it may lead to blocking of the CAN-net, diagnostic trouble codes being stored in several control modules or missing response from control modules at continued communication. The following control modules may be affected by this problem:

- Brake control module (BCM)/(ABS)
- Engine control module (ECM)
- Electronic Throttle Module (ETM)
- Suspension Module (SUM)
- Central electronic module (CEM)
- Transmission control module (TCM)
- Steering wheel angle sensor module (SAS)
- Steering Wheel Module (SWM)
- Electrical Power Steering Module (EPS)

If this happens, take the following action:

- Turn off the ignition and remove the ignition key. Insert the key again in position II.
- If the above does not work, remove the battery cable and connect it again after a minute to reset the control modules.
- Select the correct vehicle profile in VIDA and erase the diagnostic trouble codes. Check that the symptoms have disappeared.

Diagnostic outlet

- Check the voltage feed to diagnostic outlet #16. The voltage shall match battery voltage.
- Check the cable for power ground and signal ground to diagnostic outlet #4 and #5.

HINT: When VCT2000 is connected to the diagnostic outlet (is supplied with voltage), the indicator diode shall be activated with a green light. Then the indicator diode flashes quickly when communication takes place with a control module. In case of certain internal malfunctions on VCT2000 the indicator diode is activated with a red light.

Communication cables

- Check the communication cable (k-line) between diagnostic outlet #7 and central electronic module (CEM) #D6 and other connected control modules for open circuit, short-circuit to ground and short-circuit to voltage.

CAUTION: In case of malfunction on this communication cable, communication cannot be established on either the low or high-speed network. First when communication takes place on this cable, the low and high-speed cables between the diagnostic outlet and central electronic module (CEM) are connected to the rest of the network in the vehicle. This is controlled via a relay in the central electronic module (CEM). This relay is only found on vehicles of model year -2004.

- For communication problems with control units on **the high-speed network** , check communication cables between diagnostic outlet #6/ #14 and central electronic module (CEM) #B7/ #B8 for open circuit, short-circuit to ground and short-circuit to voltage according to references above.
- For communication problems with control units on **the low-speed network** , check communication cables between diagnostic outlet #3/#11 and central electronic module (CEM) #B19/#B20 for open circuit, short-circuit to ground and short-circuit to voltage according to references above.
- Also check the communication cables for the low and high-speed net between the central electronic module (CEM) and the other connected control modules according to troubleshooting above.

Control modules

- Check that the control module's voltage feed and ground connection are trouble-free.

CAUTION: If none of the above checks help, try reading out diagnostic trouble codes in the central electronic module (CEM). Done via VIDA vehicle communication. A prerequisite for being able to communicate with the control modules in the car is that the central electronic module (CEM) is active and can be communicated with. If communication is not possible with the central electronic module (CEM), check the voltage feed and ground for the central electronic module (CEM).

VCT2000 and cable harness

- Connect VCT2000 to the vehicle so that it is supplied with voltage. Test VCT2000 by selecting the system's self-test and VCT Test in the VIDA main menu. If any malfunction is found according to the test, first replace the cable harness then the VCT2000, if the test still indicates a malfunction.
- If no malfunctions were found after troubleshooting according to above, try with a new cable harness and/or new VCT2000.

VIDA

- If no malfunctions were found after troubleshooting according to above, try performing a complete system reset of VIDA (Volvo scan tool).

CHECKING SATELLITE RECEPTION (2005-2006)

CHECKING SATELLITE RECEPTION

CHECKING AERIAL MODULE (ATM)

Fig. 168: Checking Traffic Load On CAN Cables
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Certain frequencies on the radio can interfere with GPS-reception. In turn, this may lead to the navigation system indicating the wrong position or providing incorrect guidance. There are three radio frequencies that may lead to this interference. These are:

- FM 87.8 MHz.
- FM 94.3 MHz.
- FM 101.8 MHz.

To check if the problem is in the Aerial module (ATM), check as follows.

HINT: Perform the following check with a frequency, set on the radio, that is not close to the ones indicated above. Then use the check for comparison.

- Set the frequency to be investigated on the radio.
- Wait awhile so that the GPS-reception has an opportunity to stabilize.
- Check the number of satellites by clicking the symbol for VCT2000.
- If the number of satellites is less than the control case, then Aerial module (ATM) shall be replaced.

Perform the test for the three stated frequencies.

Other information

- see **LOCATION OF COMPONENTS**
- see **RECEIVER AM/FM (ATM), REPLACING**

Fig. 169: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Fig. 170: Identifying Aerial Module (ATM) Component
Courtesy of VOLKSWAGEN GROUP OF AMERICA, INC.

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING SYMPTOMS**

CHECKING SYMPTOMS

Check if the navigation system indicates wrong position, guides in an incorrect way, or if a similar symptom is found on any of the radio frequencies.

- FM 87.8 MHz.
- FM 94.3 MHz.
- FM 101.8 MHz.

If there is any symptom in the vehicle at these radio frequencies but not at others, the GPS-receiver shall be replaced.

Other information

- see **LOCATION OF COMPONENTS**
- see **RECEIVER GPS, TMC (ATM), REPLACE**

Media, Communication And Navigation - Symptom Related Diagnostic Procedures

CHECK OF SYSTEM FOR PARKING ASSISTANCE CAMERA (2007-2011)

CHECK OF SYSTEM FOR PARKING ASSISTANCE CAMERA

INTRODUCTION

The system for the parking assistance camera facilitates reversing by using a screen to display what is behind the vehicle.

This troubleshooting is to remedy problems that can arise with the parking assistance camera module (PAC) and constituent components.

First check that no diagnostic trouble codes that could affect the parking assistance camera system are stored in the central electronic module (CEM), brake control module (BCM), multimedia module (MMM) or infotainment control module (ICM).

Fig. 1: Locating Parking Assistance Camera
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CONDITIONS**

CONDITIONS

Fig. 2: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

If the system for the parking assistance camera does not work as it should. First make sure that the following conditions are met.

- Ignition on.
- Reverse gear is engaged.

Does the system for parking assistance camera work?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **SYMPTOM SELECTION**

SYMPTOM SELECTION

A number of possible symptoms are listed below. Select the alternative that best describes the situation.

1. Screen does not come up even though reverse gear is engaged. Refer to **SCREEN DOES NOT COME UP EVEN THOUGH REVERSE GEAR IS ENGAGED**
2. A picture other than the parking view is displayed even though reverse gear is engaged. Refer to **AN IMAGE OTHER THAN THE PARKING VIEW IS DISPLAYED EVEN THOUGH REVERSE GEAR IS ENGAGED**
3. Screen is up but not image is displayed even though reverse gear is engaged. Refer to **SCREEN IS UP BUT NO IMAGE OR DISTORTED IMAGE EVEN THOUGH REVERSE GEAR IS ENGAGED.**
4. Image is frozen. Refer to **IMAGE IS FROZEN**
5. Help lines drawn incorrectly. Refer to **HELP LINES DRAWN INCORRECTLY**
6. Help lines not drawn. Refer to **HELP LINES NOT DRAWN, PICTURE COMES AND GOES, PICTURE MISSING**
7. Picture comes and goes. Refer to **HELP LINES NOT DRAWN, PICTURE COMES AND GOES, PICTURE MISSING**
8. Picture missing. Refer to **HELP LINES NOT DRAWN, PICTURE COMES AND GOES, PICTURE MISSING**

AN IMAGE OTHER THAN THE PARKING VIEW IS DISPLAYED EVEN THOUGH REVERSE GEAR IS ENGAGED

Check that the installation instructions for the parking assistance camera system have been included for software installation.

- **Continue**

  Refer to **CHECKING THE FUNCTION**

SCREEN IS UP BUT NO IMAGE OR DISTORTED IMAGE EVEN THOUGH REVERSE GEAR IS ENGAGED.

Check the following:

- Cable between camera and parking assistance camera module (PAC) for open circuit, loose connection and oxidation.
- The video cable between the parking assistance camera module (PAC) and the screen for open circuit, loose connection and oxidation.
- Checking the power supply to the control module

If no fault was detected, replace the camera.

Other information

- see **CHECKING WIRING AND TERMINALS**
- see **PARKING CAMERA**
- see **SIGNAL SPECIFICATION**
- For information about the cable routing, see the relevant Wiring Diagram.

- **Continue**

  Refer to **CHECKING THE FUNCTION**

IMAGE IS FROZEN

Either the camera or the parking assistance camera module (PAC) is not working. Replace the camera. If that does not help, replace the parking assistance camera module (PAC).

Other information

- see **CHECKING WIRING AND TERMINALS**
- see **PARKING CAMERA**
- see **PARKING CAMERA MODULE**
- see **SIGNAL SPECIFICATION**
- For information about the cable routing, see the relevant Wiring Diagram.

- **Continue**

Refer to **CHECKING THE FUNCTION**

HELP LINES DRAWN INCORRECTLY

Check that the camera is set properly.

Use Activation of installation image in vehicle communication and set the camera correctly if possible.

If this does not help, replace the camera.

Other information

- see **PARKING CAMERA**
- see **SIGNAL SPECIFICATION**

- **Continue**

  Refer to **CHECKING THE FUNCTION**

SCREEN DOES NOT COME UP EVEN THOUGH REVERSE GEAR IS ENGAGED

Check that the installation instructions for the parking assistance camera system have been included for software installation.

- **Continue**

  Refer to **CHECKING THE DISPLAY SCREEN**

CHECKING THE FUNCTION

Hint: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Reinstall the connectors, components etc.
- Ignition on.

Check that the system for the parking assistance camera is working correctly.

Does the system for parking assistance camera work?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

HELP LINES NOT DRAWN, PICTURE COMES AND GOES, PICTURE MISSING

Reload the software in the control module.

- **Continue**

  Refer to **CHECKING THE FUNCTION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE DISPLAY SCREEN

FAULT-TRACING INFORMATION

Fault causes which will stop the display working:

- Open-circuit in the signal cable between the display and the multimedia module (MMM)
- No power supply to the display screen
- The display screen is not working
- Defective multimedia module (MMM)
- The MOST network is not working
- The relay for the infotainment system (positioned on the central electronic module (CEM)) is not powered.

HINT: The display screen will not deploy in the event of a fault in the MOST network. If the display screen is deployed and the data on the screen does not update or the screen suddenly retracts, the MOST network may not be working. Check that the MOST network is working.

- **Continue**

  Refer to **SYMPTOM INFORMATION**

SYMPTOM INFORMATION

Fig. 3: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Activate the multimedia module (MMM) using the navigation buttons or the remote control so that the display screen deploys and folds away.

Does the screen deploy and fold away?

- **YES**

  Refer to **CHECKING THE FUNCTION**

- **NO**

Refer to **CHECKING THE CABLE**

CHECKING THE CABLE

Fig. 4: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 5: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 5-pin connector from the display screen
- Ignition on.

Checking the cable

Check the display screen cable terminals. Check for oxidation and loose connections.

Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back

Check the voltage at the 5-pin connector for the screen. The voltage should be 12 V.

Take readings between:

- terminals #1 and #5
- terminals #2 and #4
- terminals #3 and #4.

If the voltage is not 12 V, check terminals #1, #2 and #3 in the 5-pin connector for the screen. Check for a short-circuit to ground. Check for an open-circuit.

If the voltage is not 12 V, check terminals #4 and #5 in the 5-pin connector for the screen. Check for a short-circuit to supply voltage. Check for an open-circuit.

Other information:

- To access or replace the multimedia module (MMM), see **MULTIMEDIA MODULE (MMM), REPLACING**
- To access or replace the display screen, see **CENTER LOUDSPEAKER WITH DISPLAY SCREEN, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- For further information about the fuses and relays, see the Wiring Diagram
- see **CONTENTS** .

Fig. 6: 10 CD Changer Connector Terminals
Courtesy of VOLVO CARS CORPORATION

Fig. 7: Identifying Voltage Display
Courtesy of VOLVO CARS CORPORATION

Was the fault found?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING THE CABLE**

CHECKING THE CABLE

Fig. 8: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 9: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 10-pin connector from the display screen and multimedia module (MMM).

Checking the cable

Check the cable terminals between the display screen and multimedia module (MMM). Check for loose connections and oxidation.

Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back.

Check the signal cable between display screen terminal #7 (10-pin connector) and multimedia module (MMM) terminal #B7 (#7). Check for a short-circuit to supply voltage. Check for an open-circuit.

Check the signal cable between display screen terminal #4 (10-pin connector) and multimedia module (MMM) terminal #B4 (#4). Check for a short-circuit to supply voltage. Check for a short-circuit to ground. Check for an open-circuit.

If no fault is found, replace the display screen.

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX (2003-2006)**
- To access or replace the multimedia module (MMM), see **MULTIMEDIA MODULE (MMM), REPLACING**
- To access or replace the display screen, see **CENTER LOUDSPEAKER WITH DISPLAY SCREEN, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 12: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 13: Connecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Reinstall the connectors, components etc.
- Ignition on.

  Check that the screen deploys when the ignition is switched on, when activated using the remote control or when using the steering wheel buttons for navigation.

  Ensure that the image and the colors of the image are good.

Does the display function?

- **YES**

Refer to **CHECKING THE FUNCTION**

- **NO**

  Refer to **INFORMATION**

CHECK MESSAGE ABOUT DISC INSERTION IN MMM WITH HARD DRIVE (2007-2011)

CHECK MESSAGE ABOUT DISC INSERTION IN MMM WITH HARD DRIVE

CHECK MESSAGE ABOUT DISC INSERTION IN MMM WITH HARD DRIVE

Fault-tracing information

In a vehicle with a Multimedia module (MMM) with a hard disk (HDD system), a message stating to insert a disc may appear on the screen. This is due to a software fault. There is a risk of the system drawing unnecessary battery capacity even when the vehicle has been turned off as the infotainment relay is continuously active.

Fault symptom

- Navigation/Does not work
- Navigation/Error message on screen

Check:

- If a software update is available.

CHECKING AUX-PANEL (2007-2011)

CHECKING AUX-PANEL

Remove the equipment that is connected to the AUX-panel.

Connect special tool to the AUX-panel.

see **9512989**

Click the VCT2000 symbol to begin.

Checking for the fault

If possible, check if the customer's symptom remains.

Checking the wiring

Check the cables for short-circuit to voltage, short-circuit to ground and open circuit. For further information, see the appropriate wiring diagram.

If no malfunction is found, replace the AUX-panel.

Other information

- see **CHECKING WIRING AND TERMINALS**

Fig. 14: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Fig. 15: Checking Aux-Panel
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING AUX-PANEL. REAR SEAT ENTERTAINMENT, GENERATION 4.1 (2006-2007)

CHECKING AUX-PANEL

FAULT-TRACING INFORMATION

The AUX-panel is there so that one can use other AV-sources in the system for rear seat entertainment than the DVD-player, e. g., video cameras, game pads and portable DVD-players. The panel has three RCA-contacts for connecting external equipment and two headphone outputs for connecting wired headphones. The headphone sockets are available as a back-up solution if the batteries in the wireless headphones should run out.

The RCA-contacts also function as an input in the system and when any AV-source, e. g., a video camera, has been connected to connections, it can be selected as a source with the remote control at any or both screens.

Headphones connected by wire to the headphone sockets will play the audio source that has been selected on the same side that the headphone socket is located on - that is, the left socket plays the sound that was selected at the left screen and the right socket plays the sound that was selected at the right screen.

If AV-signals to or from the AUX-panel should not arrive, probable malfunction causes are:

- Damaged leads between the Rear seat entertainment module (RSE) and the AUX-panel.
- Damaged AUX-panel.
- Connected AV source is damaged.

HINT: In order for AV sources to be played in the system for rear seat entertainment, the system for rear seat entertainment must be on and work faultlessly.

Fig. 16: Identifying AUX Panel
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE WIRING AND COMPONENT**

CHECKING THE WIRING AND COMPONENT

Checking for the fault

If possible, check if the customer's symptom remains.

Loss of audio signals from the headphone sockets is easiest checked by inserting a CD or DVD in the DVD-player, and that the DVD-player is selected as source with the remote control.

Also check that the sound from the DVD-player can be heard via other channels such as the wireless headphones or via the rear speakers, this to ensure that there is no problem in the Rear seat entertainment module (RSE).

HINT: If possible, test the function with an AV source to determine whether the fault is in the vehicle or in the customer's connected equipment.

Checking the wiring

Check the leads between Rear seat entertainment module (RSE) and the AUX-panel for the malfunction that the customer complained about. Check the cables for short-circuit to voltage, short-circuit to ground and open circuit. For further information, see the appropriate wiring diagram.

Check the control module connector. Check for contact resistance and oxidation. Check for loose connections.

Check the AV panel's RCA connectors for loose connections, open-circuits, short-circuits and the connectors connection to wiring.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE), GENERATION 4.1**
- see **CHECKING WIRING AND TERMINALS**

Fig. 17: Identifying AUX Panel
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING BUTTONS ON THE HEADSET PANEL (2003-2006)

CHECKING BUTTONS ON THE HEADSET PANEL

FAULT-TRACING INFORMATION

If the buttons on the headset panel are not working, it may be because:

- There is an open-circuit in the signal cable between the audio module (AUM) and the headset panel
- There is a short-circuit to supply voltage and ground between the audio module (AUD) and the headset panel
- Oxidation on the terminal pins in the connectors
- Defective headset panel
- Problems with the MOST network
- Defective control module.

HINT: If the buttons for any of the four headset outputs are not working, the fault is probably before the headset panel. Check that the 22-pin connector is connected to the audio module (AUD). Check that the MOST network to which the Audio module (AUD) is connected functions.

NOTE: **This fault-tracing only checks whether there is a short-circuit to supply voltage in the signal cable between the audio module (AUD) and the buttons for the headset panel. Use this fault-tracing only if no diagnostic trouble codes (DTCs) are stored in the system and the headset panel buttons are not working.**

Select an option:

1. left headset panel. Refer to **CHECKING THE CABLE**
2. right headset panel. Refer to **CHECKING THE CABLE**

CHECKING THE CABLE

Fig. 18: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 19: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector for the left headset panel
- Disconnect the 22-pin connector for the audio module (AUD).

Checking the cable

Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back.

Checking the cable for the buttons for headset output 1, left-hand headset panel

Check the cable between audio module (AUD) terminal #C15 and headset terminal #10 in the left C-post.

Check for a short-circuit to supply voltage.

Check the cable between audio module (AUD) terminal #C16 and headset terminal #8 in the left C-post. Check for a short-circuit to supply voltage.

Checking the cable for the buttons for headset output 2, left-hand headset panel

Check the cable between audio module (AUD) terminal #C17 and headset terminal #9 in the left C-post. Check for a short-circuit to supply voltage.

Check the cable between audio module (AUD) terminal #C15 and headset terminal #10 in the left C-post. Check for a short-circuit to supply voltage.

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  FAULT NOT FOUND: Troubleshooting has been completed.

CHECKING THE CABLE

Fig. 23: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 24: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector for the right headset panel
- Disconnect the 22-pin connector for the audio module (AUD).

Checking the cable

Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back.

Checking the cable for the buttons for headset output 3, right-hand headset panel

Check the cable between audio module (AUD) terminal #C21 and headset terminal #8 in the right C-post.

Check for a short-circuit to supply voltage.

Check the cable between audio module (AUD) terminal #C20 and headset terminal #10 in the right C-post. Check for a short-circuit to supply voltage.

Checking the cable for the buttons for headset output 4, right-hand headset panel

Check the cable between audio module (AUD) terminal #C22 and headset terminal #9 in the right C-post. Check for a short-circuit to supply voltage.

Check the cable between audio module (AUD) terminal #C20 and headset terminal #10 in the right C-post. Check for a short-circuit to supply voltage.

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  FAULT NOT FOUND: Troubleshooting has been completed.

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 28: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 29: Connecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Reinstall the connectors, components etc.
- Ignition on.

  Check that the buttons for the headset output function. Check this by pressing the buttons for the next track and the previous track and by changing between the CD/MD and the radio using the SEL button.

Do the buttons function?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING CD MODULE (MP2) (2003-2006)

CHECKING THE CD MODULE (MP2)

FAULT-TRACING INFORMATION

HINT: Check that the volume is not turned down.

Check other sound sources, to, see if the radio works for example.

Do other sound sources work?

- **YES**

  Refer to **CHECKING THE COMPONENT**

- **NO**

  Refer to **CHECKING THE SOUND**

CHECKING THE SOUND

Check that the settings (volume, fade, balance, central volume or power volume) are not causing the fault symptom.

Check the sound reproduction from multiple sources.

Check that all the connectors are correctly connected to the audio module (AUD) and amplifier.

CHECKING THE COMPONENT

Try listening to another CD Module (MP2).

Is there sound reproduction from the CD Module (MP2)?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **FAULT-TRACING INFORMATION**

FAULT-TRACING INFORMATION

The fault should now have been detected and remedied. As this is not the case, the fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or try again.

CHECKING CD/DVD (2003-2011)

CHECKING CD/DVD

FAULT-TRACING INFORMATION

Check that the CD/DVD does not have any fingerprints, dirt or other items which may interfere with reading.

If the disc is dirty the reader may have difficulty reading from the disc.

Problems may occur with a dirty CD/DVD

- Error message of unreadable disc is displayed on the screen
- Diagnostic trouble code (DTC) MMM-2000.

If the CD/DVD is dirty, clean the disc as follows:

- Spray ethanol-free washer fluid on the shiny surface of the disc.
- Give the fluid a few seconds to work.
- Carefully clean the surface with a soft fiber cloth or paper towel.
- Rinse the disc in warm water.
- Dry the disc with a soft, lint-free paper towel.

If cleaning the disc does not rectify the problem, try another CD/DVD in the reader.

If the fault recurs, replace the CD/DVD reader.

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

SYMPTOM VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 30: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 31: Connecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Reinstall the connectors, components etc.
- Ignition on

  Make sure there is a CD/DVD in the CD/DVD player. Check that the CD/DVD is read properly.

Can the CD/DVD be read?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING COLOR DEVIATIONS, RTI DISPLAY (2003-2008)

CHECKING COLOR DEVIATIONS, RTI DISPLAY

A problem that seems to be a color variation up at the right hand corner of the screen is not a color variation and not a pixel problem. This affects the background design which was launched 200620 for all DVD and HDD systems. Even vehicles manufactured before 200620 may have obtained this software via an update. Changing the RTI screen does not change the background design because the design is implemented in the software. The background design does not affect the navigation system's technical function.

To rectify the problem, new software must be installed. Software with a new background design has been introduced and launched 200748. The software is not downloaded from PIE but installed via CD ROM or DVD ROM, depending on the system.

CHECKING DISC ERROR (2003-2006)

CHECKING DISK ERROR

FAULT-TRACING INFORMATION

If Multimedia module has problems reading a CD/DVD-disc, the message is shown on the screen.

The problem may be that the lens in the Multimedia module is dirty.

- Use (a cleaning disc) to clean the lens in Multimedia module.

  Follow the instructions that are supplied with.

If cleaning the lens in the Multimedia module (MMM) does not rectify the problem, check the CD/DVD.

Check that the CD/DVD does not have any fingerprints, dirt or other items which may interfere with reading.

If the CD/DVD is dirty, clean the disc as follows:

- Spray ethanol-free washer fluid on the shiny surface of the disc.

- Give the fluid a few seconds to work.
- Carefully clean the surface with a soft fiber cloth or paper towel.
- Rinse the disc in warm water.
- Dry the disc with a soft, lint-free paper towel.

If cleaning the disc does not rectify the problem, try another CD/DVD in the reader.

If the fault recurs, replace the multimedia module (MMM).

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING INSERT AND EJECT, CD MODULE (MP2) (2003-2006)

CHECKING INSERT AND EJECT

FAULT-TRACING INFORMATION

Check that nothing is in the way or inserted into the MD player.

Remedy as necessary.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **TESTING**

REPLACING THE COMPONENT

Before continuing with fault-tracing, the following must be checked:

- All tests for the relevant symptom must have been carried out
- No component, connector or wiring faults etc. should have been detected.

Try replacing the CD module (MP2).

NOTE: A new CD Player Module (MP2) was delivered without software. It must be programmed in order for it to function after replacement.

Other information:

- For information about programming and accessing or replacing the CD module (MP2), see **MINIDISC / CD CONTROL MODULE, REPLACING** .

TESTING

If a disc with contents that cannot be read by the CD player, e. g. a CD-ROM, has been inserted, the disc may get stuck and the text "unreadable disc" is shown on the display.

1. Turn on the CD player and wait until the text "unreadable disc" appears in the display.
2. Remove the fuses for the CD player module (MP2).
3. Wait at least 10 seconds and then refit the fuses.
4. Turn on the CD player again and wait until the text "unreadable disc" appears in the display.
5. Press the Eject button
6. Repeat as necessary, 2-5 times.

Other information:

- For information on fuses, see the relevant wiring diagram.

Was a fault detected?

- **NO**

  Refer to **REPLACING THE COMPONENT**

- **YES**

  OKAY: Troubleshooting has been completed.

CHECKING INSERT AND EJECT, MD MODULE (MP1) (2003-2006)

CHECKING INSERT AND EJECT

FAULT-TRACING INFORMATION

Check that nothing is in the way or inserted into the MD player.

Remedy as necessary.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Before continuing with fault-tracing, the following must be checked:

- All tests for the relevant symptom must have been carried out
- No component, connector or wiring faults etc. should have been detected.

Try replacing the MD module (MP1).

CAUTION: A new MD module (MP1) is delivered without software. The MD module (MP1) must be programmed in order to function after replacement.

Other information:

- For further information about programming and replacing the MD module (MP1), see **MINIDISC / CD CONTROL MODULE, REPLACING** .

CHECKING IPOD COMPATIBILITY (2009-2011)

CHECKING IPOD COMPATIBILITY

This applies to the following vehicles:

- XC90, structure week 200848 -

If you connect an iPod that is not supported by the USB iPod interface in the USB slot, the message "Unreadable" may be shown in the Driver information module (DIM).

Fault-tracing information

Check the iPod-compatibility according to TIE: TJ 22530.

Fault symptom

- Audio other/Other audio problems
- USB unit/Does not work

Fig. 32: Identifying USB Unit
Courtesy of VOLVO CARS CORPORATION

Has the fault been remedied?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING MD MODULE (MP1) (2003-2006)

CHECKING THE MD MODULE (MP1)

FAULT-TRACING INFORMATION

HINT: Check that the volume is not turned down.

Check other sound sources, to, see if the radio works for example.

Do other sound sources work?

- **YES**

  Refer to **CHECKING THE COMPONENT**

- **NO**

  Refer to **CHECKING THE SOUND**

CHECKING THE SOUND

Check that the settings (volume, fade, balance, central volume or power volume) are not causing the fault symptom.

Check the sound reproduction from multiple sources.

Check that all the connectors are correctly connected to the audio module (AUD) and amplifier.

CHECKING THE COMPONENT

Try listening to another MD Module (MP1).

Is there sound reproduction from the MD Module (MP1)?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **FAULT-TRACING INFORMATION**

FAULT-TRACING INFORMATION

The fault should now have been detected and remedied. As this is not the case, the fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or try again.

CHECKING POWER SUPPLY, REAR SEAT ENTERTAINMENT MODULE (RSE). REAR SEAT ENTERTAINMENT, GENERATION 4.1-4.3 (2006-2011)

CHECKING POWER SUPPLY, REAR SEAT ENTERTAINMENT MODULE (RSE) (2009-2011)

FAULT-TRACING INFORMATION

The rear seat entertainment module (RSE) is supplied power from two different circuits. The following can occur if there is no power supply:

- Lighting in the DVD-player's buttons is not activated at all with ignition on.
- Lighting in all of the DVD-player's buttons is activated and then goes off, after approx. 5-10 seconds, when the system is turned on with the power switch on the DVD-player.

Causes of the problem may be:

- Contact resistance or oxidation in the terminals.
- Damaged fuse.
- Open circuit or short-circuiting of leads for voltage feeds and ground.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

Fig. 33: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE POWER SUPPLY AND GROUND**

CHECKING THE POWER SUPPLY AND GROUND

- Ignition on.

- Turn on the system with the main switch on the DVD-player. Lighting in the DVD-player's buttons is activated.

If lighting in all of the DVD-player's buttons is activated, and then goes off after approx. 5-10 seconds, this indicates lost 15-feed to rear seat entertainment module (RSE)/DVD-player. Fault-trace according to the following options.

Check the lead for voltage feed (15-feed) to rear seat entertainment module (RSE)/DVD-player's #A6 and #A7 for short-circuiting to voltage, short-circuiting to ground and open circuit.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

HINT: When this feed is lost, the system will only work for another approx. 10 minutes. The system cannot be restarted until the power supply is OK.

NOTE: If no cable or fuse defects are found and there still is no power supply, the problem probably lies in the vehicle electrical system. For fuse position, see wiring diagram in question.

If lighting in the buttons does not come on at all, this indicates malfunction of the voltage feed or ground for the rear seat entertainment module (RSE)/DVD-player.

Check the lead for voltage feed to rear seat entertainment module (RSE)/DVD-player's #A4, #A6 and #A7 for short-circuiting to voltage, short-circuiting to ground and open circuit. The voltage should be approx. the same as the battery voltage.

Check the connector for rear seat entertainment module (RSE)/DVD-player contact resistance and oxidation.

Check the lead for ground connection to rear seat entertainment module (RSE), connector #A8, for open circuit and short-circuit to voltage. Also check the ground terminal. Check for contact resistance and oxidation.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

For more information, see wiring diagram and signal description.

  Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Restore components and connectors.
- Switch on the ignition. Lighting in the DVD-player's buttons is activated. If the TV receiver is installed, the receiver's LED lights up.
- When start-up is performed the lighting in the DVD-player's buttons goes off, does not apply to POWER-button. If the TV receiver is installed, the receiver's LED goes out.

NOTE: A long start-up time indicates a fault in communication with the screens.

- Start the system using the POWER button on the DVD player or the remote control. Use the buttons, on both DVD-player and remote control, to operate the system.

Check that:

- The screens show a picture.
- DVD-disc can be played.
- Sound is heard in wireless headphones.
- Sound can be heard in the vehicle's speakers.
- Menus can be accessed with the remote control in both screens.
- TV picture appears (if TV receiver is installed) and it is possible to change channels.

- If possible, connect an external source to the AV input and test the function.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING POWER SUPPLY, REAR SEAT ENTERTAINMENT MODULE (RSE) (2008)

FAULT-TRACING INFORMATION

The rear seat entertainment module (RSE) is supplied power from two different circuits. The following can occur if there is no power supply:

- Lighting in the DVD-player's buttons is not activated at all with ignition on.
- Lighting in all of the DVD-player's buttons is activated and then goes off, after approx. 5-10 seconds, when the system is turned on with the power switch on the DVD-player.

Causes of the problem may be:

- Contact resistance or oxidation in the terminals.
- Damaged fuse.
- Open circuit or short-circuiting of leads for voltage feeds and ground.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

Fig. 36: Identifying Rear Seat Entertainment Module (RSE)

- **Continue**

  Refer to **CHECKING THE POWER SUPPLY AND GROUND**

CHECKING THE POWER SUPPLY AND GROUND

- Ignition on.
- Turn on the system with the main switch on the DVD-player. Lighting in the DVD-player's buttons is activated.

If lighting in all of the DVD-player's buttons is activated, and then goes off after approx. 5-10 seconds, this indicates lost 15-feed to rear seat entertainment module (RSE)/DVD-player. Fault-trace according to the following options.

Check the lead for voltage feed (15-feed) to rear seat entertainment module (RSE)/DVD-player's #A6 and #A7 for short-circuiting to voltage, short-circuiting to ground and open circuit.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

HINT: When this feed is lost, the system will only work for another approx. 10 minutes. The system cannot be restarted until the power supply is OK.

NOTE: **If no cable or fuse defects are found and there still is no power supply, the problem probably lies in the vehicle electrical system. For fuse position, see wiring diagram in question.**

If lighting in the buttons does not come on at all, this indicates malfunction of the voltage feed or ground for the rear seat entertainment module (RSE)/DVD-player.

Check the lead for voltage feed to rear seat entertainment module (RSE)/DVD-player's #A4, #A6 and #A7 for short-circuiting to voltage, short-circuiting to ground and open circuit. The voltage should be approx. the same as the battery voltage.

Check the connector for rear seat entertainment module (RSE)/DVD-player contact resistance and oxidation.

Check the lead for ground connection to rear seat entertainment module (RSE), connector #A8, for open circuit and short-circuit to voltage. Also check the ground terminal. Check for contact resistance and oxidation.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

For more information, see wiring diagram and signal description.

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING POWER SUPPLY, REAR SEAT ENTERTAINMENT MODULE (RSE) (2006)

FAULT-TRACING INFORMATION

The rear seat entertainment module (RSE) is supplied power from two different circuits. The following can occur if there is no power supply:

- Lighting in the DVD-player's buttons is not activated at all with ignition on.
- Lighting in all of the DVD-player's buttons is activated and then goes off, after approx. 5-10 seconds, when the system is turned on with the power switch on the DVD-player.

Causes of the problem may be:

- Contact resistance or oxidation in the terminals.
- Damaged fuse.
- Open circuit or short-circuiting of leads for voltage feeds and ground.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

Fig. 39: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE POWER SUPPLY AND GROUND**

CHECKING THE POWER SUPPLY AND GROUND

- Ignition on.
- Turn on the system with the main switch on the DVD-player. Lighting in the DVD-player's buttons is activated.

If lighting in all of the DVD-player's buttons is activated, and then goes off after approx. 5-10 seconds, this indicates lost 15-feed to rear seat entertainment module (RSE)/DVD-player. Fault-trace according to the following options.

Check the lead for voltage feed (15-feed) to rear seat entertainment module (RSE)/DVD-player's #A6 and #A7 for short-circuiting to voltage, short-circuiting to ground and open circuit.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

HINT: When this feed is lost, the system will only work for another approx. 10 minutes. The system cannot be restarted until the power supply is OK.

NOTE: If no cable or fuse defects are found and there still is no power supply, the problem probably lies in the vehicle electrical system. For fuse position, see wiring diagram in question.

If lighting in the buttons does not come on at all, this indicates malfunction of the voltage feed or ground for the rear seat entertainment module (RSE)/DVD-player.

Check the lead for voltage feed to rear seat entertainment module (RSE)/DVD-player's #A4, #A6 and #A7 for

short-circuiting to voltage, short-circuiting to ground and open circuit. The voltage should be approx. the same as the battery voltage.

Check the connector for rear seat entertainment module (RSE)/DVD-player contact resistance and oxidation.

Check the lead for ground connection to rear seat entertainment module (RSE), connector #A8, for open circuit and short-circuit to voltage. Also check the ground terminal. Check for contact resistance and oxidation.

HINT: Power supply (15 feed) is common with power supply to rear 12 V socket.

For more information, see wiring diagram and signal description.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING RADIO RECEPTION (2007-2010)

CHECKING RADIO RECEPTION

FAULT-TRACING INFORMATION

Troubleshooting analyses have shown that poor AM/FM-reception may be due to several causes. To perform correct action, troubleshoot first according to the following:

- Check if there are diagnostic trouble codes set for integrated audio module (IAM) or Audio module (AUM) (applies to S60 07-) and primarily follow the instructions that each diagnostic trouble code refers to.
- Check fuses.
- Check the cable harness and connectors. Poor radio reception may be because the antenna connectors are not connected to the window antennas. If there is no radio reception, this may be because the antenna cable is not connected to the antenna amplifier.
- Check the antenna amplifier.
- Perform a visual check of the antennas.

Replace damaged components.

If no malfunction is found:

- Replace antenna amplifier. Check the function.
- If the problem remains, replace Integrated Audio Module (IAM) or Audio module (AUM).

Other information

- see **SIGNAL SPECIFICATION, AUDIO CONTROL MODULE**
- see **CHECKING WIRING AND TERMINALS**
- Wiring diagram.

Fault symptom

- Radio/Does not work
- Radio/Interference/AM frequency
- Radio/Interference/FM frequency
- Radio/Poor reception/AM frequency
- Radio/Poor reception/FM frequency

NOTE: Download new software in the new control module after replacement.

CHECKING SOUND CABLES. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)

FAULT-TRACING INFORMATION

If no sound is heard from the Rear Seat Entertainment Module (RSE) system but the sound system in general,

the car radio for example, otherwise functions, the fault could be due to:

- Supply/fuse for the control module for rear audio separation
- Supply/fuse for the rear seat entertainment module (RSE)
- Wiring from the ordinary sound system of the car
- The wiring between the rear seat entertainment module (RSE) and the control module for rear audio separation
- Rear seat entertainment module (RSE).

Fig. 45: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Fig. 46: Identifying Control Module For Rear Audio Separation
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)

Checking the settings

Check that the volume has not been turned down via the remote control menu system SPEAKERS. Also check that there is no sound from the rear speakers or from the headsets for the system. Check that the fault does not only occur when a specific sound source is selected.

Checking the power supply to the control module for rear audio separation

Check that the fuses for the control module rear audio separation are intact. Check that power is supplied to the fusebox and ground terminal for the control module.

HINT: The control module is supplied with power via terminals #A1 and #A4 and grounded via terminal #A13.

Checking the power supply to the rear seat entertainment module (RSE)

In addition check the fuses for rear seat entertainment module (RSE) in the same way.

HINT: The control module is supplied with power via terminals #B1, #B4 and #B6. The control module is grounded via terminal #B12.

Checking the input signals to the control module for rear audio separation from the standard audio system of the car

Sound is received by the control module for rear audio separation from the connections where the rear loudspeakers are normally mounted on a standard car without a rear seat entertainment module (RSE). Check the following cables between the terminals and the control module for rear audio separation:

- Left-hand loudspeaker terminal #A23 (Amplifier L-)
- Left-hand loudspeaker terminal #A12 (Amplifier L+)
- Right-hand loudspeaker terminal #A21 (Amplifier R-)
- Right-hand loudspeaker terminal #A22 (Amplifier R+).

Other information

  Refer to **CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)

Audio signals function description

The sound from the DVD or auxiliary input (AUX) source, for example, is connected between each source and the control module. The control module separates the desired sound source in two channels according to the wishes of the passengers. (This makes it possible to listen to different sources in the rear seat).

Channel 1 applies to passengers on the left-hand and channel 2 applies to passengers on the right-hand side. In addition there is an audio signal for each ear which achieves a stereo effect.

Checking signals

Check the audio cable between the rear seat entertainment module (RSE) (terminal #C) and the control module for rear audio separation (terminal #A).

- Check the audio cable for channel 1, left ear. This is the cable between control module terminal #C2 and control module terminal #A5
- Check the audio cable for channel 1, right ear. This is the cable between control module terminal #C1 and control module terminal #A6
- Check the audio cable for channel 2, left ear. This is the cable between control module terminal #C5 and control module terminal #A3
- Check the audio cable for channel 2, right ear. This is the cable between control module terminal #C4 and control module terminal #A2
- In addition there is a ground connection for the audio signals Check the ground lead for the audio signal between control module terminal #C12 and control module terminal #A15.

Control module for rear audio separation and speaker wiring

Check the function of the sound system. Check that both headsets function correctly. If the sound system functions, the control module for rear audio separation is receiving the correct signals from the control module.

The fault is probably in the loudspeaker wiring for the rear loudspeakers or in the control module for rear audio separation.

Remedy as necessary.

Other information

CHECKING THE AUXILIARY INPUT (AUX). REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE AUXILIARY INPUT (AUX)

FAULT-TRACING INFORMATION

If the auxiliary input (AUX) does not function the fault could be due to:

- Wiring or contact resistance in the terminals
- Defective rear seat entertainment module (RSE)
- The AUX-panel
- Externally connected component.

Fig. 51: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE AUXILIARY INPUT (AUX)**

CHECKING THE AUXILIARY INPUT (AUX)

Checking the settings

Ensure that the problem only occurs when the accessory is connected.

Test by connecting an accessory which definitely functions correctly.

Check that there is power supplied to the accessory.

Checking the picture signal

Check the wiring for the picture signal. This is the cable between auxiliary input (AUX) terminal #6 and control module terminal #C7. Also check the cable for the picture ground. This is the cable between the auxiliary input

(AUX) terminal #5 and control module terminal #C8.

Checking wiring for audio signals

Check the audio wiring for the accessory. The right-hand audio signal. This is the cable between auxiliary input (AUX) terminal #4 and control module terminal #C9.

The left audio signal. This is the cable between auxiliary input (AUX) terminal #3 and control module terminal #C10.

The audio ground lead. This is the cable between auxiliary input (AUX) terminal #2 and control module terminal #C11.

Checking the auxiliary input (AUX)

Check the AUX panel, replace it if necessary. If no other fault is found there could be a fault in the control module.

Remedy as necessary.

- Ignition off
- Disconnect the 10-pin connector from the display screen and multimedia module (MMM).

Checking the cable

Check the connectors. Check for loose connections and oxidation.

Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back

Check the signal cable between display screen terminal #1 (10-pin connector) and multimedia module (MMM) terminal #B1 (#1). Check for a short-circuit to supply voltage. Check for a short-circuit to ground. Check for an open-circuit.

Check the signal cable between display screen terminal #2 (10-pin connector) and multimedia module (MMM) terminal #B2 (#2). Check for a short-circuit to supply voltage. Check for a short-circuit to ground. Check for an open-circuit.

Check the signal cable between display screen terminal #7 (10-pin connector) and multimedia module (MMM) terminal #B7 (#7). Check for a short-circuit to supply voltage. Check for a short-circuit to ground. Check for an open-circuit.

Check the signal cable between the 10-pin connector for display screen terminal #6 and multimedia module (MMM) terminal #B6 (#6). Check for a short-circuit to supply voltage. Check for a short-circuit to ground. Check for an open-circuit.

Check the signal cable between display screen terminal #6 (10-pin connector) and multimedia module (MMM) terminal #B6 (#6). Check for a short-circuit to supply voltage. Check for a short-circuit to ground. Check for an open-circuit.

If no fault is found, replace the display screen.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX (2003-2006)**
- To access or replace the multimedia module (MMM), see **MULTIMEDIA MODULE (MMM), REPLACING**
- To access or replace the display screen, see **CENTER LOUDSPEAKER WITH DISPLAY SCREEN, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE DISPLAY FOR THE INFOTAINMENT SYSTEM (2003-2011)

CHECKING THE DISPLAY FOR THE INFOTAINMENT UNIT (2003-2006)

FAULT-TRACING INFORMATION

The MOST network is a fiber optic ring network. This means that all control modules which are connected to the network must be powered and grounded for the infotainment system to work. If, for any reason, a control module is unable to transmit the signals onwards on the MOST network, or if there is an open-circuit in the fiber optic cable, the infotainment control module (ICM) will shut down all functionality.

Communication on the fiber optic net is one-directional. The control modules on the MOST network receive light signals, amplify them and then send them onwards. The MOST connectors for the control modules contain two fiber optic cables, one for incoming and one for outgoing signals. The cables must be correctly positioned in the connector for communication to function.

Faults in the infotainment system can cause the display for the infotainment control module (ICM) to flash or not light when the unit is activated.

The fault can be both permanent and intermittent.

The fault causes may be:

- Open-circuit or loose connections in the wiring between the display and the infotainment control module (ICM)
- Contact resistance and oxidation in the connectors between the infotainment control module (ICM) and the display screen
- A control module other than the infotainment control module (ICM) is interfering with the communication on the MOST network
- Problem downloading the correct software
- The software and display type are not compatible
- Defective display screen.

NOTE: **The infotainment control module (ICM) stores a diagnostic trouble code (DTC) if the power for the display from the infotainment control module (ICM) is incorrect. The display also switches off if the MOST network is not functioning or if there are internal faults in the infotainment control module (ICM). If there are diagnostic trouble codes (DTCs) in the infotainment control module (ICM), these must be fault-traced first.**

- **Continue**

  Refer to **CHECKING THE COMPONENT**

CHECKING THE COMPONENT

Fig. 67: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Check whether the fault is in the infotainment control module (ICM) as follows:

  - press the POWER button twice with a couple of seconds in-between
  - press the MENU button.

  If a menu text is now displayed, the fault is not in the infotainment control module (ICM) but in another control module on the MOST network.

  If no menu text is displayed, continue fault-tracing the infotainment control module (ICM) as follows.

  Checking the infotainment control module (ICM)

  Check the connectors between the display and the infotainment control module (ICM). Check for contact resistance and oxidation. Check for loose connections. Check for damage carefully.

  Visually check the wiring between the display and the infotainment control module (ICM). Check for damage.

  A test of the display can be run by clicking the VCT2000 symbol.

  Remedy as necessary.

  Other information

  - To access or replace the display / infotainment control module (ICM), see **INFOTAINMENT CONTROL MODULE (ICM), REPLACING**

Fig. 68: Identifying VCT2000 Diagnostic Tool Symbol In VIDA

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **CHECKING COMPONENTS**

CHECKING COMPONENTS

Check the functionality of the MOST network by first checking the CD player and then the radio reception.

CD player

Check the functionality of the CD player as follows:

1. Select the CD player by pressing the CD button
2. Check that the display for the infotainment control module (ICM) shows that CD has been selected

3. Play a CD. Check that there is sound from the loudspeakers. Do not use copied CDs during this check.

Radio reception

Check the functionality of the antenna module (ATM) as follows:

1. Select radio reception by pressing the AM/FM button and switching between FM1, FM2 and AM
2. Check that the display for the infotainment control module (ICM) shows that the radio has been selected
3. Check that there is radio sound from the loudspeakers.

To continue fault-tracing, select from the following alternatives.

Alternative 1:

No sound in the loudspeakers when playing a CD.

Refer to **CHECKING THE CD PLAYER**

Alternative 2:

No sound in the loudspeakers when playing the radio.

Refer to **CHECKING THE ANTENNA MODULE (ATM)**

Alternative 3:

No sound from the loudspeakers for the CD or radio.

Refer to **CHECKING MOST COMMUNICATION**

Fig. 70: Identifying Control Module Communication
Courtesy of VOLVO CARS CORPORATION

CHECKING THE CD PLAYER

Check the power supply and ground terminal for the CD player. Check for an intermittent open-circuit. Check for an intermittent short-circuit to ground. Check for an intermittent short-circuit to supply voltage.

Remedy as necessary.

Other information

- see **MINIDISC / CD CONTROL MODULE, REPLACING**
- **Continue**

  Refer to **VERIFICATION**

CHECKING THE ANTENNA MODULE (ATM)

Check the power supply and ground terminal for the antenna module (ATM). Check for an intermittent open-circuit. Check for an intermittent short-circuit to ground. Check for an intermittent short-circuit to supply voltage.

Remedy as necessary.

Other information

- see **RECEIVER AM/FM (ATM), REPLACING**
- **Continue**

  Refer to **VERIFICATION**

CHECKING MOST COMMUNICATION

Check the communication on the MOST network by bypassing the control modules one by one on the MOST network as follows:

- Ignition off
- Disconnect the MOST connector from the relevant control module
- Connect the MOST cable to special tool see **9512867**
- Ignition on
- Activate the infotainment system
- Check that the communication on the MOST network is functioning by reading off the status of the MOST locked parameter for at least 30 seconds. The parameter indicates whether the MOST network is closed and communication possible.

Click the VCT2000 symbol to read off the status of the MOST network.

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE DISPLAY SCREEN. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2003-2005)

CHECKING THE DISPLAY SCREEN

CHECKING THE DISPLAY SCREEN

Make sure that nothing is stuck at the screen hinges or there is no other mechanical fault that could prevent the screen from opening properly.

HINT: Information on screen initiation is found in the User Manual for the Rear Seat Entertainment system.

Initiate the screen motor as follows:

- Press the Power button (1) on the remote control to switch the system on.
- Press the Default Settings button (14) on the remote control.
- Press the Power button (1) on the remote control to switch the system off.

The check that the screen opens correctly when the system is switched off.

If initiation fails or the fault recurs often, replace the screen.

Remedy as necessary.

FAULT INFORMATION

Condition

Screen does not open. This can lead to an audible rattling noise from the screen while driving.

Substitute Value

- None.

Possible Source

- Screen has not been initiated.

Fault symptom[s]

- Display will not fold up

CHECKING THE DISPLAY, MULTIMEDIA MODULE (MMM) (2003-2011)

CHECKING THE DISPLAY SCREEN (2003-2006)

FAULT-TRACING INFORMATION

Fault causes which will stop the display working:

- Open-circuit in the signal cable between the display and the multimedia module (MMM)
- No power supply to the display screen
- The display screen is not working
- Defective multimedia module (MMM)
- The MOST network is not working
- The relay for the infotainment system (positioned on the central electronic module (CEM)) is not powered.

HINT: The display screen will not deploy in the event of a fault in the MOST network. If the display screen is deployed and the data on the screen does not update or the screen suddenly retracts, the MOST network may not be working. Check that the MOST network is working.

- **Continue**

  Refer to **SYMPTOM INFORMATION**

SYMPTOM INFORMATION

Fig. 83: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Activate the multimedia module (MMM) using the navigation buttons or the remote control so that the display screen deploys and folds away.

Does the screen deploy and fold away?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

Refer to **CHECKING THE CABLE**

CHECKING THE CABLE

Fig. 84: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 85: Disconnecting Connector

- Ignition off
- Disconnect the 5-pin connector from the display screen
- Ignition on.

Checking the cable

Check the display screen cable terminals. Check for oxidation and loose connections.

Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back

Check the voltage at the 5-pin connector for the screen. The voltage should be 12 V.

Take readings between:

- terminals #1 and #5
- terminals #2 and #4
- terminals #3 and #4.

If the voltage is not 12 V, check terminals #1, #2 and #3 in the 5-pin connector for the screen. Check for a short-circuit to ground. Check for an open-circuit.

If the voltage is not 12 V, check terminals #4 and #5 in the 5-pin connector for the screen. Check for a short-circuit to supply voltage. Check for an open-circuit.

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE DVD PLAYER. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE DVD PLAYER

FAULT-TRACING INFORMATION

If the DVD player does not function but the other audio/display sources do function the fault could be due to:

- Short-circuit/open circuit on cable.
- Damaged dvd-disc.
- Damaged dvd-player.
- Damaged rear seat entertainment module (RSE).

Fig. 105: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Fig. 106: Identifying DVD-Player And Connectors
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE FUNCTION**

CHECKING THE FUNCTION

Fig. 107: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Turn on the system for rear seat entertainment using the remote control.

  Check that the buttons on the DVD player light up.

Do the buttons on the DVD player light up?

- **YES**

  Refer to **CHECKING THE WIRING**

- **NO**

  Refer to **CHECKING THE POWER SUPPLY**

CHECKING THE POWER SUPPLY

Check that the internal fuse in the DVD player is intact. Replace the fuse if it is damaged.

Check the wiring between the DVD player and the Rear Seat Entertainment Module (RSE).

Check the voltage to the DVD player at the Rear Seat Entertainment Module (RSE). Measure between #D4 and #D6.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- For further information about the fuses and relays, see the Wiring Diagram.
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **DVD PLAYER, REPLACING**
- see **CHECKING WIRING AND TERMINALS**

Fig. 108: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Fig. 109: Identifying DVD-Player And Connectors
Courtesy of VOLVO CARS CORPORATION

Is voltage between 10-14 V?

- **YES**

  Refer to **CHECKING GROUND CONNECTION**

- **NO**

  Refer to **CHECKING THE WIRING**

CHECKING GROUND CONNECTION

Measure the resistance between the Rear Seat Entertainment Module (RSE) terminal #D12 and ground. The

resistance must be less than 1 ohms.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- For further information about the fuses and relays, see the Wiring Diagram.
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **DVD PLAYER, REPLACING**
- see **CHECKING WIRING AND TERMINALS**

Is resistance less than 1 ohms?

- **YES**

  Refer to **CHECKING THE WIRING**

- **NO**

  Refer to **CHECKING THE WIRING**

CHECKING THE WIRING

Check the wiring between the DVD player and the Rear Seat Entertainment Module (RSE). Check for an open-circuit and short-circuit.

If a fault is found change the wiring between the control module and the DVD player.

Was a fault detected?

- **YES**

  Refer to **CHECKING THE DVD PLAYER**

- **NO**

  Refer to **CHECKING THE DVD PLAYER**

CHECKING THE DVD PLAYER

Check that the DVD is not damaged and that it is clean. Try using another DVD if necessary.

Check that nothing has jammed in the DVD player. Check that there are no mechanical grinding noises coming from the DVD player when it is in operation.

Check that the DVD is the correct format for the DVD player (NTSC/PAL).

Is the transportation protection disc in the DVD player?

- **YES**

  Refer to **CHECKING THE FUNCTION**

- **NO**

  Refer to **CHECKING THE INLET ON THE CONTROL MODULE**

CHECKING THE INLET ON THE CONTROL MODULE

Fig. 110: Identifying Ignition In Off Position
Courtesy of VOLVO CARS CORPORATION

- Ignition off.
- Move the connector for the dvd-player to the input for the tv-connection.
- Ignition on.

  Select the dvd-player as source for one of the screens and press on the remote control's PLAY button. Adjust the screen settings for the monitor where playing takes place, if needed.

Fig. 111: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Is playing OK?

- **YES**

  Refer to **CHECKING THE INLET ON THE CONTROL MODULE**

- **NO**

  Refer to **REPLACING THE DVD PLAYER**

CHECKING THE INLET ON THE CONTROL MODULE

Select TV as source for one of the screens and press on the remote control's PLAY button. Adjust the screen settings for the monitor where playing takes place, if needed.

NOTE: **If tv-receiver is not installed in the vehicle, connect DVD or AUX as source to that input.**

Is playing OK?

- **YES**

  Refer to **CHECKING THE FUNCTION**

- **NO**

  Refer to **REPLACING THE REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING THE FUNCTION

Fig. 112: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Turn on the system for rear seat entertainment using the remote control.

  Select DVD as source at one of the display screens. When DVD is selected a message about incorrect format is displayed within a few seconds. When the message is gone, press the EJECT button.

  If the disc is ejected, insert an undamaged dvd-disc and press the YES button below.

Is the transport protection disc ejected?

- **YES**

  Refer to **CHECKING THE DVD PLAYER**

- **NO**

  Refer to **REPLACING THE DVD PLAYER**

CHECKING THE FUNCTION

Select the dvd-player as source for one of the screens and press on the remote control's PLAY button.

Adjust the screen settings for the monitor where playing takes place, if needed.

Is playing OK?

- **YES**

  FAULT NOT FOUND: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING THE DVD PLAYER**

REPLACING THE DVD PLAYER

Replace dvd-player according to the following instruction.

- see **DVD PLAYER, REPLACING**

Fig. 113: Identifying DVD-Player And Connectors
Courtesy of VOLVO CARS CORPORATION

REPLACING THE REAR SEAT ENTERTAINMENT MODULE (RSE)

Replace the Rear Seat Entertainment Module (RSE) according to the following instruction.

- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**

Fig. 114: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

CHECKING THE DVD PLAYER

CHECKING THE DVD PLAYER

Check that the DVD player and other audio and display sources function.

Do the DVD player and other audio and display sources function?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE DVD PLAYER. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (EXECUTIVE; PREMIER; 2004)

CHECKING THE DVD PLAYER

see **CHECKING THE DVD PLAYER**

CHECKING THE DVD PLAYER, MULTIMEDIA MODULE (MMM) (2003-2011)

CHECKING THE DVD PLAYER

FAULT-TRACING INFORMATION

Fault causes which will stop the data on the display from updating:

- Defective multimedia module (MMM)
- Problems with the MOST network.

HINT: Check that the MOST network is working before beginning fault-tracing.

NOTE: **Check that no diagnostic trouble codes (DTCs) are stored in the multimedia module (MMM) or the infotainment control module (ICM) and that other tests have been completed before fault-tracing.**

Have all tests been completed and no diagnostic trouble codes (DTCs) are stored?

- **YES**

  Refer to **CHECKING THE COMPONENT**

- **NO**

  OKAY: Troubleshooting has been completed.

CHECKING THE COMPONENT

Fig. 115: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Reinstall the connectors, components etc.
- Ignition on.

Checking the component

Check that the DVD player is working by clicking the VCT2000 symbol. If the DVD player is functioning, OK is displayed.

Try a new DVD player if it is not working.

Remedy as necessary

Other information:

- To access or replace the multimedia module (MMM), see **MULTIMEDIA MODULE (MMM), REPLACING** .

Fig. 116: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

CHECKING THE EXTERNAL VOLTAGE SUPPLY FOR THE CONNECTED AUDIO/VIDEO SOURCE FOR REAR SEAT ENTERTAINMENT. REAR SEAT ENTERTAINMENT, GENERATION 4.1-4.3 (2006-2011)

CHECKING THE EXTERNAL VOLTAGE SUPPLY FOR THE CONNECTED AUDIO/VIDEO SOURCE FOR REAR SEAT ENTERTAINMENT

FAULT-TRACING INFORMATION

When an external video/audio source is connected to the system for rear seat entertainment, via AUX-input, it may occur that there is interference with the picture on the screen. It may also happen that the sound is unclear with occurrence of "system sounds".

The fault causes may be:

- Voltage adapter to connected accessory.

NOTE: **In order for AV sources to be played in the system for rear seat entertainment, the system for rear seat entertainment must be on and work faultlessly.**

- **Continue**

  Refer to **FAULT-TRACING INFORMATION**

FAULT-TRACING INFORMATION

If the symptoms appear when a voltage adapter for 110 V or 220/240 V is used, the problem may be remedied by connected a 12 V DC adapter directly to the vehicle's 12 V socket.

NOTE: **This is only applicable for accessories that can function with system voltage 12 V.**

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS). REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

FAULT-TRACING INFORMATION

If neither display screen functions and the fault is not related to a certain function, for example when the DVD or auxiliary input (AUX) is in use, the fault may be due to:

- Contact resistance in the terminals and connectors
- Disconnected connector to the display screen
- Open-circuit in the signal cable
- Power supply
- Defective rear seat entertainment module (RSE).

Fig. 117: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)**

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

Checking the settings

Check that the contrast is set correctly via the DISPLAY menu.

Check that the display screen has not been switched off via the remote control menu system SCREEN OFF.

Checking the power to the supply control module

Check that the fuses for the control module are intact and that power is supplied to the fusebox and ground terminal for the control module.

HINT: The control module is supplied with power via terminals #B1, #B4 and #B6. The control module is grounded via terminal #B12.

Checking the connector to the control module (neither display screens function)

Check that the connector between the control module and both display screens (terminal A) is connected. If the control module does not transmit picture signals from the DVD, or auxiliary input (AUX), there is probably a fault in the control module.

Checking the lighting for the control module

If the surround lighting for the display screen does not function. Carry out the above checks on another cable. Check the power supply to the lighting. Check the cable between the control module terminal #A10/#A20 and the display screen terminal #10. In addition check the lighting ground supply, the cable between the control module terminal #A9/ #A19 and display screen terminal #9. (One for each display screen).

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- For further information about the fuses and relays, see the Wiring Diagram
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **CONTENTS**

Fig. 118: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)**

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

Check that both the display screens function.

Do the display screens in the head restraint function?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS). REAR SEAT ENTERTAINMENT, GENERATION 3.2 (EXECUTIVE; PREMIER; 2004)

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

see **CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)**

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS). REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)

FAULT-TRACING INFORMATION

If only one display screen functions the fault may be due to:

- Power supply
- Contact resistance in the connectors
- Open-circuit in the cable between the display screen/head restraint and the rear seat entertainment module (RSE)

- Open-circuit in the cable between the rear seat entertainment module (RSE) and the connector under the rear seat (Y-shaped cable)
- Damaged rear seat entertainment module (RSE).
- Damaged display screen.

Fig. 119: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Fig. 120: Identifying Cable Connector To Display Screen/Head Restraint
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)**

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)

Checking for the fault

Check that the fault occurs regardless of sound or screen source (DVD, TV (if installed), AUX).

Checking screen head rest

Fault-tracing can be minimized by swapping the left and right-hand screens over. Check to, see if the fault remains after the transfer.

NOTE: Ensure that the system is switched off before disconnecting any connector.

HINT: It is unusual for a screen to break.

Checking the settings

Check that the contrast is set correctly via the DISPLAY menu.

Check that the display screen has not been switched off via the remote control menu system SCREEN OFF.

Select the non-functioning display screen:

1. Left-hand display screen
2. Right-hand display screen.

Fig. 121: Identifying Cable Connector To Display Screen/Head Restraint
Courtesy of VOLVO CARS CORPORATION

- **1**

  Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)**

- **2**

  Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)**

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)

Checking the control module connector

There is probably a fault in the wiring between the display screen and the control module or in the middle connector.

Check the left-hand picture signal. Check the cable between the control module terminal #A7 and display screen terminal #7.

Check the ground signal to left screen, that is, the cable between the control module #A8 and the screen #8.

Checking feed to screen

Check the supply to the display screen. Supply is carried via a cable between control module terminal #A6 and display screen terminal #6. The ground terminal is from control module terminal #A3 and display screen terminal #3.

Checking the lighting for the control module

If the surround lighting for the display screen does not function. Carry out the above checks on another cable.

Check the supply to the lighting. Check the cable between control module terminal #A10 and display screen terminal #10. The voltage must be approximately 10-14 V.

In addition check the power supply for the cable, the cable between control module terminal #A9 and display screen terminal #9. The resistance must be less than 1 ohms.

Remedy as necessary.

Other information:

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **HEAD RESTRAINT WITH TV SCREEN, REPLACING**
- see **CONTENTS**

Fig. 122: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)**

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)

Checking the control module connector

There is probably a fault in the wiring between the display screen and the control module or in the middle connector.

Check the right-hand picture signal. Check the cable between the control module terminal #A17 and display screen terminal #7.

Check the ground signal for the right-hand picture. Check the cable between the control module terminal #A18 and display screen terminal #8.

Checking the supply to the display screen

Check the supply to the display screen. Supply is carried via a cable between control module terminal #A16 and display screen terminal #6. The ground terminal is from control module terminal #A13 and display screen terminal #3.

Checking the lighting for the control module

If the surround lighting for the display screen does not function. Carry out the checks as above on another cable.

Check the supply to the lighting. Check the cable between control module terminal #A20 and display screen terminal #10. The voltage must be approximately 10-14 V.

In addition check the power supply for the cable, the cable between control module terminal #A19 and display screen terminal #9. The resistance must be less than 1 ohms.

Remedy as necessary.

Other information:

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **HEAD RESTRAINT WITH TV SCREEN, REPLACING**
- see **CONTENTS**

- **Continue**

Refer to **CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)**

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

CHECKING THE HEAD RESTRAINT DISPLAY (BOTH SCREENS)

Check that both the display screens function.

Do the display screens in the head restraint function?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS). REAR SEAT ENTERTAINMENT, GENERATION 3.2 (EXECUTIVE; PREMIER; 2004)

CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)

see **CHECKING THE HEAD RESTRAINT DISPLAY (ONE SCREEN FUNCTIONS)**

CHECKING THE HEADSET PANEL (2003-2006)

CHECKING THE HEADSET PANEL

FAULT-TRACING INFORMATION

HINT: Check that the headsets used are functioning.

If there is no sound in the headsets it may be caused by:

- Open-circuit in the signal cable between the audio module (AUM) and the headset
- Oxidation on the terminal pins in the connectors

- Defective headset panel
- Problems with the MOST network
- Defective control module.

HINT: If there is no sound from any of the four headset outputs, the fault is probably before the headset panel. Check that the 22-pin connector is connected to the audio module (AUD). Check that the MOST network to which the Audio module (AUD) is connected functions.

Select an option:

1. left headset panel. Refer to **CHECKING THE CABLE, LEFT HEADSET PANEL**.
2. right headset panel. Refer to **CHECKING THE CABLE, RIGHT HEADSET PANEL**.

CHECKING THE CABLE, LEFT HEADSET PANEL

HINT: Turn up the volume for the headset output which does not function. If the volume changes the fault has been remedied.

Fig. 124: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 22-pin connector for the audio module (AUD)
- Disconnect the connector for the left headset panel.

Checking the cable

Check that the headset panel connectors are correctly connected. Check the cable terminals. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back

Checking the signal cable to headset output 1, left-hand headset panel

Check the cable between audio module (AUD) terminal #C1 and headset terminal #1 in the left C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C2 and headset terminal #3 in the left C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C13 and headset terminal #2 in the left C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Checking the signal cable to headset output 2, left-hand headset panel

Check the cable between audio module (AUD) terminal #C3 and headset terminal #5 in the left C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C4 and headset terminal #7 in the left C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C14 and headset terminal #6 in the left C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

If no fault is found, replace the headset panel.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

Fig. 125: Identifying Connector (D) Terminals

Courtesy of VOLVO CARS CORPORATION

Fig. 126: Identifying Ohm Meter
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  FAULT NOT FOUND: Troubleshooting has been completed.

CHECKING THE CABLE, RIGHT HEADSET PANEL

Fig. 127: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 22-pin connector for the audio module (AUD)
- Disconnect the connector for the right headset panel.

HINT: Turn up the volume for the headset output which does not function. If the volume changes the fault has been remedied.

Checking the cable

Check that the headset panel connectors are correctly connected. Check the cable terminals. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back

Checking the cable to headset output 3, right-hand headset panel

Check the cable between audio module (AUD) terminal #C7 and headset terminal #1 in the right C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C8 and headset terminal #3 in the right C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C18 and headset terminal #2 in the right C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Checking the cable to headset output 4, right-hand headset panel

Check the cable between audio module (AUD) terminal #C9 and headset terminal #5 in the right C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C10 and headset terminal #7 in the right C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

Check the cable between audio module (AUD) terminal #C19 and headset terminal #6 in the right C-post. Check for a short-circuit to ground, for a short-circuit to supply and for an open-circuit.

If no fault is found, replace the headset panel.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**

Fig. 128: Identifying Connector (D) Terminals
Courtesy of VOLVO CARS CORPORATION

Fig. 129: Identifying Ohm Meter
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  FAULT NOT FOUND: Troubleshooting has been completed.

VERIFICATION

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied. Check that the headsets to be used function before verification is carried out.

Fig. 130: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on
- Connect the headset to the output in the headset panel which did not function
- Switch on the radio or CD/MD player
- Press the SEL button to select the sound source for the output in the headset panel to be tested.

  Increase and decrease the volume on the headset panel for the selected output.

Is there sound?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE HEADSETS. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE HEADSETS

FAULT-TRACING INFORMATION

If the headsets do not function the fault could be due to:

- The headsets (Infra-red receiver in the headsets)
- Damaged IR-transmitter/head rest.
- Cable harness between control module rear sound separation and IR-transmitter/head rest.

Fig. 131: View Of Rear Seat Entertainment
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE HEADSETS**

CHECKING THE HEADSETS

Checking the settings

Check that the volume has not been turned down via VOLUME on the remote control or that the volume on the relevant headset has not been turned down.

Check that the sound source for the selected headset channel and the headsets are on.

Check that it is only the headsets that do not function. In the event of the control module rear audio separation not functioning, the rear loudspeakers will not function either.

Checking the infra-red transmitter/head restraint and infra-red receiver/headsets

Check that the infra-red transmitter/head restraint is not obstructed.

Also check that the receiver in the headsets is not obstructed.

HINT: In certain cases moisture can impair infra-red signal reception.

Checking the settings

Check that the headsets have been selected in the menu system.

Check that the correct channel has been selected. Check that the volume has been turned up.

Checking the headsets

Check the headset batteries.

Check to, see if the other headset functions. If this is the case the headsets are defective.

Checking the IR transmitter

Check that the IR-transmitter, on the underside of one of the head rests, is not concealed or damaged. When the IR-transmitter is active a weak glow shall be seen from the transmitter's diodes.

Checking cables to IR-transmitter

Check the connector on the control module for rear audio separation terminal #B.

Check the wiring between the infra-red transmitter/head restraint terminals #1-4 and the control module for rear audio separation terminals #B1 to #B4.

HINT: terminal #B1 is for the power supply and terminal #B4 is ground. The infra-red signal is transmitted between #B2 and #B3.

If no malfunction is found on the cables, try replacing the IR-transmitter.

Remedy as necessary.

CHECKING THE INSERT AND EJECT (2007-2011)

CHECKING THE INSERT AND EJECT

SELECTING THE MEDIA PLAYER

Fig. 134: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on

  Activate identification of the type of media player the vehicle is equipped with by clicking the symbol for VCT2000.

  Select the appropriate alternative.

  1. Integrated audio module (IAM)

     Refer to **FAULT-TRACING INFORMATION**

  2. Media player module (MPM)

Refer to **FAULT-TRACING INFORMATION**

Fig. 135: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

FAULT-TRACING INFORMATION

Check that nothing is in the way or inserted into the media player.

Remedy as necessary.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Before continuing with fault-tracing, the following must be checked:

- All tests for the relevant symptom must have been carried out
- No component, connector or wiring faults etc. should have been detected.

Try replacing the media player module (MPM).

CAUTION: A new media player module (MPM) is delivered without software. The transmission control module (TCM) must be programmed when it has been replaced.

Other information

- see **CONTROL MODULE GENERAL SOUND PLAYER**

FAULT-TRACING INFORMATION

Check that nothing is in the way or inserted into the media player.

Remedy as necessary.

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Before continuing with fault-tracing, the following must be checked:

- All tests for the relevant symptom must have been carried out
- No component, connector or wiring faults etc. should have been detected.

Try replacing the Integrated Audio Module (IAM).

CAUTION: A new Integrated Audio Module (IAM) is supplied without software. It must be programmed in order for it to function after replacement.

Other information

- see **CONTROL MODULE GENERAL SOUND PLAYER**

CHECKING THE LOUDSPEAKERS AND LOUDSPEAKER WIRING (2003-2006)

CHECKING THE LOUDSPEAKERS AND LOUDSPEAKER WIRING

FAULT-TRACING INFORMATION

HINT: Check that the volume is not turned down. Turn the VOLUME knob on the infotainment control module (ICM). Also check that the balance is set evenly between all the speakers using the SELECTOR knob.

The loudspeakers may stop playing back sound from a particular sound source, for example the MD and CD players or the radio.

Causes of the problem may be:

- Open-circuit in the signal cable between the audio module (AUM)/(AUD) and the loudspeakers
- defective loudspeakers
- Oxidation in the terminal pins in the connectors
- Problems on the MOST network
- Defective control module.

HINT: If there is no sound from any of the loudspeakers, check that the 16-pin connector on the audio module (AUD) is correctly connected. If there is still no sound from the loudspeakers, the problem is not in the loudspeaker wiring.

Select an option:

1. loudspeakers front/center

   Refer to **CHECKING THE CABLE, FRONT/CENTER LOUDSPEAKERS**

2. loudspeakers rear.

   Refer to **CHECKING THE LOUDSPEAKER WIRING, REAR DOORS**

CHECKING THE LOUDSPEAKER WIRING, REAR DOORS

Fig. 136: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 16-pin connector for the audio module (AUD)
- Disconnect the connectors for the rear loudspeakers.

HINT: There may be two loudspeakers connected to these signal cables, one for the treble loudspeaker in the D-post and one for the loudspeaker in the rear door. For further information, see the wiring diagram.

Checking the cable

Check the cable terminals on the loudspeaker cable. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable

terminals must not be damaged or pressed back.

Checking the cable for the loudspeaker, left rear door

Check the cable between audio module (AUD) terminal #B12 and loudspeaker terminal #1 in the left rear door. Check for an open-circuit.

Check the cable between audio module (AUD) terminal #B4 and loudspeaker terminal #2 in the left rear door. Check for an open-circuit.

Check the resistance between terminals #B4 and #B12 in the connector for the audio module (AUD). The resistance must be infinite.

Checking the cable for the loudspeaker, right rear door

Check the cable between audio module (AUD) terminal #B13 and loudspeaker terminal #1 in the right rear door. Check for an open-circuit.

Check the cable between audio module (AUD) terminal #B5 and loudspeaker terminal #2 in the right rear door. Check for an open-circuit.

Check the resistance between terminals #B5 and #B13 in the connector for the audio module (AUD). The resistance must be infinite.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- To access or replace the loudspeaker in the D-post, see **LOUDSPEAKER, D-POST, REPLACING**
- To access or replace the loudspeaker in the rear side door, see **LOUDSPEAKER, REAR SIDE DOOR, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

- **Continue**

  Refer to **CHECKING THE LOUDSPEAKERS, REAR DOOR**

CHECKING THE LOUDSPEAKERS, REAR DOOR

Fig. 139: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 16-pin connector for the audio module (AUD)
- Disconnect the connectors for the rear loudspeakers.

HINT: There may be two loudspeakers connected to the same signal cable, one for the treble loudspeaker in the D-post and one for the loudspeaker in the rear door. For further information, see the wiring diagram.

NOTE: **Take readings for the treble loudspeaker in the D-post on the two signal cables which are directly connected to the cone transducer. See the illustration. Take readings between points 1 and 2.**

Checking the cable

Check the cable terminals on the loudspeaker cable. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back

Checking the loudspeaker, left rear door

Check the resistance between loudspeaker terminals #1 and #2. The resistance must be approximately 2-8 ohms.

Checking the loudspeaker, left-hand D-post

Check the resistance of the treble loudspeaker in the left-hand D-post. See the illustration. Take readings between points 1 and 2. The resistance must be approximately 6-8 ohms.

Checking the loudspeaker, right rear door

Check the resistance between loudspeaker terminals #1 and #2. The resistance must be approximately 2-8 ohms.

Checking the loudspeaker, right-hand D-post

Check the resistance of the treble loudspeaker in the right-hand D-post. See the illustration. Take readings between points 1 and 2. The resistance must be approximately 6-8 ohms.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- To access or replace the loudspeaker in the D-post, see **LOUDSPEAKER, D-POST, REPLACING**
- To access or replace the loudspeaker in the rear side door, see **LOUDSPEAKER, REAR SIDE DOOR, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

Was a fault detected?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  FAULT NOT FOUND: Troubleshooting has been completed.

CHECKING THE CABLE, FRONT/CENTER LOUDSPEAKERS

Fig. 143: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 16-pin connector for the audio module (AUD)
- Disconnect the connectors for the front loudspeakers
- Disconnect the connector for the center loudspeaker if it is connected.

NOTE: **Only some audio modules have a center loudspeaker connected. If the center loudspeaker is not connected do not perform fault-tracing for the center loudspeaker.**

HINT: There may be two loudspeakers connected to the same signal cable, one for the treble loudspeaker/upper loudspeaker in the front door and one for the loudspeaker in the front door. For further information, see the wiring diagram.

Checking the cable

Check the cable terminals on the loudspeaker cable. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back.

Checking the cable for the loudspeaker, left front door

Check the cable between audio module (AUD) terminal #B9 and loudspeaker terminal #1 in the left front door. Check for an open-circuit.

Check the cable between audio module (AUD) terminal #B1 and loudspeaker terminal #2 in the left front door. Check for an open-circuit.

Check the resistance between terminals #B1 and #B9 in the connector for the audio module (AUD). The resistance must be infinite.

Checking the cable for the loudspeaker, right front door

Check the cable between audio module (AUD) terminal #B3 and loudspeaker terminal #2 in the right front door. Check for an open-circuit.

Check the cable between audio module (AUD) terminal #B11 and loudspeaker terminal #1 in the right front door. Check for an open-circuit.

Check the resistance between terminals #B3 and #B11 in the connector for the audio module (AUD). The resistance must be infinite.

Checking the cable for the center loudspeaker

Check the cable between audio module (AUD) terminal #B2 and center speaker terminal #2 on the dashboard. Check for an open-circuit.

Check the cable between audio module (AUD) terminal #B10 and center speaker terminal #1 on the dashboard. Check for an open-circuit.

Check the resistance between terminals #B2 and #B10 in the connector for the audio module (AUD). The resistance must be infinite.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**

Refer to **CHECKING THE CABLE, FRONT/CENTER LOUDSPEAKERS**

CHECKING THE CABLE, FRONT/CENTER LOUDSPEAKERS

Fig. 146: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 16-pin connector for the audio module (AUD)
- Disconnect the connector for the center loudspeaker.

NOTE: **Take readings for the treble loudspeaker in the center loudspeaker bracket on the two signal cables which are directly connected to the treble cone transducer. See the illustration. Take readings between points 1 and 2.**

Checking the cable

Check the cable terminals on the loudspeaker cable. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable

terminals must not be damaged or pressed back.

Checking the center speaker

Check the resistance between terminals #1 and #2 on the center speaker. The resistance must be approximately 5-8 ohms.

Check the resistance in the treble transducer for the center speaker. See the illustration. Take readings between points 1 and 2. The resistance must be approximately 6-8 ohms

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- To access or replace the center loudspeaker, see **CENTRAL LOUDSPEAKER, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

- **Continue**

  Refer to **CHECKING THE CABLE, FRONT/CENTER LOUDSPEAKERS**

CHECKING THE CABLE, FRONT/CENTER LOUDSPEAKERS

Fig. 150: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the 16-pin connector for the audio module (AUD)
- Disconnect the connectors for the front loudspeakers.

HINT: There may be two loudspeakers connected to the same signal cable, one for the treble loudspeaker/upper loudspeaker and one for the loudspeaker in the front door. For further information, see the wiring diagram.

CAUTION: Check the treble loudspeaker/upper loudspeaker visually only. Check for oxidation and loose connections. Do not perform any electrical fault-tracing on the treble loudspeaker.

NOTE: **Certain loudspeakers may have two separate cone transducers. For these loudspeakers, follow the fault-tracing for both loudspeakers and cone transducers in the left and right front doors. For other loudspeakers, only perform the fault-tracing for the loudspeakers in the left and right-hand front doors.**

Checking the cable

Check the cable terminals on the loudspeaker cable. Check for contact resistance, loose connections and oxidation. Check the cable terminals in the female and male sections of the connector. The cable terminals must not be damaged or pressed back.

Checking the loudspeaker, left front door

Check the resistance between loudspeaker terminals #1 and #2 in the left front door. The resistance must be approximately 2-4 ohms.

Checking the upper cone transducer, left front door

Check the resistance between the terminals for the upper cone transducer in the left-hand front door. See the illustration. Take readings between points 1 and 2. The resistance must be approximately 3-5 ohms.

Checking the loudspeaker, right front door

Check the resistance between loudspeaker terminals #1 and #2 in the right front door. The resistance must be 2-4 ohms.

Checking the upper cone transducer, right front door

Check the resistance between the terminals for the upper cone transducer in the right-hand front door. See the illustration. Take readings between points 1 and 2. The resistance must be approximately 3-5 ohms.

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- To access or replace the loudspeaker in the front side door, see **LOUDSPEAKER, FRONT SIDE DOOR, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

Courtesy of VOLVO CARS CORPORATION

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 154: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on
- Switch on the radio or CD/MD player.

  Raise and lower the volume using the VOLUME knob. Check that the sound increases and decreases in the loudspeakers at the same time.

Is there sound?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE MEDIA PLAYER (2007-2011)

CHECKING THE MEDIA PLAYER

SELECTING THE MEDIA PLAYER

Fig. 155: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on

  Activate identification of the type of media player the vehicle is equipped with by clicking the symbol for VCT2000.

  Select the appropriate alternative.

  1. Integrated audio module (IAM)

     Refer to **FAULT-TRACING INFORMATION**

  2. Media player module (MPM)

     Refer to **FAULT-TRACING INFORMATION**

Fig. 156: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

FAULT-TRACING INFORMATION

HINT: Check that the volume is not turned down.

Check other sound sources, to, see if the radio works for example.

Do other sound sources work?

- **YES**

  Refer to **CHECKING THE COMPONENT**

- **NO**

  Refer to **CHECKING THE SOUND**

CHECKING THE SOUND

Check that the settings (volume, fade, balance, central volume or power volume) are not causing the fault symptom.

Check the sound reproduction from multiple sources.

Check that all the connectors are correctly connected to the audio module (AUD) and amplifier.

CHECKING THE COMPONENT

- Disconnect the media player module (MPM)
- Connect another media player.

  Load a CD disc and check that the media player is working.

  Other information

  - see **CONTROL MODULE GENERAL SOUND PLAYER**

Is there sound reproduction from the media player?

- **YES**

  FAULT NOT FOUND: Troubleshooting has been completed.

- **NO**

  Refer to **FAULT-TRACING INFORMATION**

FAULT-TRACING INFORMATION

The fault should now have been detected and remedied. As this is not the case, the fault-tracing has failed.

Complete the fault-tracing for this fault symptom or try again.

FAULT-TRACING INFORMATION

HINT: Check that the volume is not turned down.

Check other sound sources, to, see if the radio works for example.

Do other sound sources work?

- **YES**

  Refer to **CHECKING THE COMPONENT**

- **NO**

  Refer to **CHECKING THE SOUND**

CHECKING THE COMPONENT

- Detach the Integrated Audio Module (IAM).
- Connect another media player.

  Load a CD disc and check that the media player is working.

  Other information

  - see **CONTROL MODULE GENERAL SOUND PLAYER**

Is there sound reproduction from the media player?

- **YES**

  FAULT NOT FOUND: Troubleshooting has been completed.

- **NO**

  Refer to **FAULT-TRACING INFORMATION**

CHECKING THE SOUND

Check that the settings (volume, fade, balance, central volume or power volume) are not causing the fault symptom.

Check the sound reproduction from multiple sources.

Check that all connectors are correctly connected to the speakers or the Audio Control Module (AUD) (option).

CHECKING THE MICROPHONE (2003-2006)

CHECKING THE MICROPHONE

FAULT-TRACING INFORMATION

Fault causes which will stop the microphone working:

- Defective microphone
- Short-circuit to supply voltage in the signal cable between the microphone and the audio module (AUD)
- Defective audio module (AUD)
- Problems with the MOST network.

HINT: Check that the MOST network is working before beginning fault-tracing.

NOTE: Check that no diagnostic trouble codes (DTCs) are stored in the audio module (AUD) or the infotainment control module (ICM) and that other tests have been completed before fault-tracing.

Have all tests been completed and no diagnostic trouble codes (DTCs) are stored?

- **YES**

  Refer to **CHECKING THE CABLE**

- **NO**

  OKAY: Troubleshooting has been completed.

CHECKING THE CABLE

Fig. 157: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector for the microphone in the rear view mirror.

  Check the cable terminals. Check for contact resistance and oxidation. Check the female and male sections of the connector. The cable terminals must not be damaged or pressed back.

  Check the signal cable between audio module (AUD) terminal #B8 and microphone terminal #A2 (pin B). Check for a short-circuit to supply voltage.

  Check the signal cable between audio module (AUD) terminal #B16 and microphone terminal #A1 (pin A). Check for a short-circuit to supply voltage.

  Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the audio module (AUD), see **AUDIO MODULE (AUD), REPLACING**
- To access or replace the microphone, see **MICROPHONE, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- see **CONTENTS** .

Courtesy of VOLVO CARS CORPORATION

Fig. 160: Identifying 1-Bit Connector
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 161: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 162: Connecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Reinstall the connectors, components etc.
- Ignition on.

  Check that the microphone input functions by activating the microphone appropriately. Make a telephone call using the handsfree system or use the voice control function.

Does the microphone function?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE REAR LOUDSPEAKERS. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE REAR LOUDSPEAKERS

FAULT-TRACING INFORMATION

If both headsets function but the rear loudspeakers do not function at the same time as the other speakers in the car, the fault can be due to:

- Cable harness to loudspeaker used by the system for rear seat entertainment.
- Rear audio separation module.

NOTE: **If the vehicle is equipped with a parking assistance system a shut-off function is activated if the reverse gear is selected. This is so the warning signals from the back-up warning system can be heard.**

Fig. 163: Identifying Control Module For Rear Audio Separation
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING REAR LOUDSPEAKER**

CHECKING REAR LOUDSPEAKER

Checking the settings

Check that the loudspeakers have not been switched off via the remote control menu system SPEAKERS.

Check that the volume has not been turned down via the remote control and that there is a sound source (listen at the speakers).

Ensure that the loudspeakers are not obstructed.

If the headsets do not work the fault is more general than described in this section.

The fault could be due to the control module for rear audio separation providing sound to the headsets but not the speakers.

NOTE: If the vehicle is equipped with a parking assistance system a shut-off function

is activated if the reverse gear is selected. This is so the warning signals from the back-up warning system can be heard.

Checking the wiring for the loudspeakers

Check the following wiring between the control module for rear audio separation and the rear loudspeakers.

- Left-hand loudspeaker terminal #A8 (Speaker L-)
- Left-hand loudspeaker terminal #A11 (Speaker L+)
- Right-hand loudspeaker terminal #A9 (Speaker R-)
- Right-hand loudspeaker terminal #A10 (Speaker R+).

Also check the loudspeakers for damage.

Checking the channel selector

The control module for rear audio separation receives a channel selection signal from the rear seat entertainment module (RSE). The signal informs the control module for rear audio separation what sound should be heard from the rear loudspeakers. If this does not work satisfactorily this signal is the cause of the fault. If the signal is 0V no sound will be heard from the loudspeakers. There might not be a fault but a selected setting carried out via the remote control, menu select SPEAKERS OFF.

Check the cable for the channel selector. This is the cable between rear seat entertainment module (RSE) terminal #C6 and control module for rear audio separation terminal #A18.

Checking the control module for rear audio separation

If no fault is found, replace the control module for rear audio separation.

Remedy as necessary.

Other information:

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- see **SIGNAL SPECIFICATION, CONTROL MODULE FOR REAR AUDIO SEPARATION**
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **CONTROL MODULE REAR SOUND SEPARATION, REPLACING**
- see **CONTENTS**

Fig. 164: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Fig. 165: Identifying Control Module For Rear Audio Separation
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE REAR LOUDSPEAKERS**

CHECKING THE REAR LOUDSPEAKERS

CHECKING THE REAR LOUDSPEAKERS

Check that both headsets and all loudspeakers in the car function.

Do all headsets and speakers function?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE REAR LOUDSPEAKERS. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (EXECUTIVE; PREMIER; 2004)

CHECKING THE REAR LOUDSPEAKERS

see **CHECKING THE REAR LOUDSPEAKERS**

CHECKING THE REMOTE CONTROL. REAR SEAT ENTERTAINMENT, GENERATION 4.1-4.3 (2007)

CHECKING THE REMOTE CONTROL

FAULT-TRACING INFORMATION

The remote control uses infrared signals (IR) to transmit commands to the system. The signals are received by the screen's infrared receiver. If the remote control does not work, the problem may be due to:

- Discharged batteries.
- Damaged remote control.
- Damaged cable for infrared (IR) signals.

- **Continue**

  Refer to **CHECKING THE REMOTE CONTROL SIGNAL**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Restore components and connectors.
- Switch on the ignition. Lighting in the DVD-player's buttons is activated. If the TV receiver is installed, the receiver's LED lights up.
- When start-up is performed the lighting in the DVD-player's buttons goes off, does not apply to POWER-button. If the TV receiver is installed, the receiver's LED goes out.

NOTE: A long start-up time indicates a fault in communication with the screens.

- Start the system using the POWER button on the DVD player or the remote control. Use the

buttons, on both DVD-player and remote control, to operate the system.

Check that:

- The screens show a picture.
- DVD-disc can be played.
- Sound is heard in wireless headphones.
- Sound can be heard in the vehicle's speakers.
- Menus can be accessed with the remote control in both screens.
- TV picture appears (if TV receiver is installed) and it is possible to change channels.
- If possible, connect an external source to the AV input and test the function.

Fig. 166: View Of Rear Seat Entertainment Components
Courtesy of VOLVO CARS CORPORATION

Is the function OK?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

CHECKING THE REMOTE CONTROL SIGNAL

HINT: Activation of the infrared IR-receivers in the head restraints can be checked by the IR-lights in the screen's lower edge being on dimly after the system has been turned on.

Checking IR-signal, left screen

To check the voltage level on the signal cable for IR-signal, proceed as follows:

- Connect all cables and connectors.
- Measure the voltage between the signal cable for the Infra Red (IR) signal to the left-hand display screen and ground. The measured voltage is reference value.

NOTE: Do not press any of the buttons on the remote control during this measurement.

- Measure from the rear side of a suitable connector. Do not damage the terminals in the connector.
- Aim the remote control at the left screen and press in a button on the remote control. The voltage on the signal cable must fall slightly for as long as the button on the remote control is pressed in. Test all remote control buttons.

NOTE: Important in this measurement are not the absolute voltage levels, instead you get a voltage difference downward.

Checking IR-signal, right screen

Compare the latest reading as above with the signal for the infra red (IR) signal from the right-hand infra red (IR) receiver for the display screen.

Conclusion

- If the result of the above checks is that no malfunction was found, this means that the receivers in both screens work and that the remote control is OK.
- If voltages on the cables are OK but a lower voltage cannot be measured when a button on the remote control is pressed down, try with replacing the remote control.

If there signal cable fault for the IR signal to the screen, check the IR signal cable between the screen and rear seat entertainment module (RSE) for short circuit to ground, short circuit to voltage and open circuit.

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE), GENERATION 4.1**
- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE), GENERATION 4.2**
- see **CHECKING WIRING AND TERMINALS**

- **Continue**

  Refer to **VERIFICATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE REMOTE CONTROL. REAR SEAT ENTERTAINMENT, GENERATION 4.1-4.3 (2006-2011)

CHECKING THE REMOTE CONTROL (2006)

FAULT-TRACING INFORMATION

The remote control uses infrared signals (IR) to transmit commands to the system. The signals are received by the screen's infrared receiver. If the remote control does not work, the problem may be due to:

- Discharged batteries.
- Damaged remote control.
- Damaged cable for infrared (IR) signals.

- **Continue**

  Refer to **CHECKING THE REMOTE CONTROL SIGNAL**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Restore components and connectors.
- Switch on the ignition. Lighting in the DVD-player's buttons is activated. If the TV receiver is installed, the receiver's LED lights up.
- When start-up is performed the lighting in the DVD-player's buttons goes off, does not apply to POWER-button. If the TV receiver is installed, the receiver's LED goes out.

NOTE: A long start-up time indicates a fault in communication with the screens.

- Start the system using the POWER button on the DVD player or the remote control. Use the buttons, on both DVD-player and remote control, to operate the system.

Check that:

- The screens show a picture.

- DVD-disc can be played.
- Sound is heard in wireless headphones.
- Sound can be heard in the vehicle's speakers.
- Menus can be accessed with the remote control in both screens.
- TV picture appears (if TV receiver is installed) and it is possible to change channels.
- If possible, connect an external source to the AV input and test the function.

Is the function OK?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

CHECKING THE REMOTE CONTROL SIGNAL

HINT: Activation of the infrared IR-receivers in the head restraints can be checked by the IR-lights in the screen's lower edge being on dimly after the system has been turned on.

Checking IR-signal, left screen

To check the voltage level on the signal cable for IR-signal, proceed as follows:

- Connect all cables and connectors.
- Measure the voltage between the signal cable for the Infra Red (IR) signal to the left-hand display screen and ground. The measured voltage is reference value.

  NOTE: Do not press any of the buttons on the remote control during this measurement.

- Measure from the rear side of a suitable connector. Do not damage the terminals in the connector.
- Aim the remote control at the left screen and press in a button on the remote control. The voltage on the signal cable must fall slightly for as long as the button on the remote control is pressed in. Test all remote

control buttons.

NOTE: Important in this measurement are not the absolute voltage levels, instead you get a voltage difference downward.

Checking IR-signal, right screen

Compare the latest reading as above with the signal for the infra red (IR) signal from the right-hand infra red (IR) receiver for the display screen.

Conclusion

- If the result of the above checks is that no malfunction was found, this means that the receivers in both screens work and that the remote control is OK.
- If voltages on the cables are OK but a lower voltage cannot be measured when a button on the remote control is pressed down, try with replacing the remote control.

If there signal cable fault for the IR signal to the screen, check the IR signal cable between the screen and rear seat entertainment module (RSE) for short circuit to ground, short circuit to voltage and open circuit.

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE), GENERATION 4.3**

- **Continue**

  Refer to **VERIFICATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE REMOTE CONTROL (2008)

FAULT-TRACING INFORMATION

The remote control uses infrared signals (IR) to transmit commands to the system. The signals are received by the screen's infrared receiver. If the remote control does not work, the problem may be due to:

- Discharged batteries.
- Damaged remote control.
- Damaged cable for infrared (IR) signals.

- **Continue**

  Refer to **CHECKING THE REMOTE CONTROL SIGNAL**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

- Ignition off.
- Restore components and connectors.
- Switch on the ignition. Lighting in the DVD-player's buttons is activated. If the TV receiver is installed, the receiver's LED lights up.
- When start-up is performed the lighting in the DVD-player's buttons goes off, does not apply to POWER-button. If the TV receiver is installed, the receiver's LED goes out.

NOTE: A long start-up time indicates a fault in communication with the screens.

- Start the system using the POWER button on the DVD player or the remote control. Use the buttons, on both DVD-player and remote control, to operate the system.

Check that:

- The screens show a picture.
- DVD-disc can be played.
- Sound is heard in wireless headphones.
- Sound can be heard in the vehicle's speakers.
- Menus can be accessed with the remote control in both screens.
- TV picture appears (if TV receiver is installed) and it is possible to change channels.
- If possible, connect an external source to the AV input and test the function.

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE SIGNAL FROM THE AV PANEL. REAR SEAT ENTERTAINMENT, GENERATION 4.2 (2007-2008)

CHECKING THE SIGNAL FROM THE AV PANEL

FAULT-TRACING INFORMATION

The AV-panel is there so that one can use other AV-sources than the DVD-player in the system for rear seat entertainment, e. g., video camera, game console and portable DVD-player.

The RCA-contacts also function as an input in the system and when any AV-source, e. g., a video camera, has been connected to connections, it can be selected as a source with the remote control at any or both screens.

If AV-signals to, or from, the AV-panel should not occur, probable malfunction causes are:

- Damaged leads between the Rear seat entertainment module (RSE) and the AV-panel.
- Damaged AV-panel.
- Connected AV source is damaged.

NOTE: In order for AV sources to be played in the system for rear seat entertainment, the system for rear seat entertainment must be on and work faultlessly.

Fig. 170: Identifying AV-Panel
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE WIRING AND COMPONENT**

CHECKING THE WIRING AND COMPONENT

Check the cables for short-circuit to voltage, short-circuit to ground and open circuit. Regards the cables from rear seat entertainment module (RSE), terminals #D4, #D7, #D18, #D19 and #D21, to the AV panel.

Check the control module connector. Check for contact resistance and oxidation.

Check the AV panel's RCA connectors for loose connections, open-circuits, short-circuits and the connectors connection to wiring.

HINT: If possible, test the function with an AV source to determine whether the fault is in the vehicle or in the customer's connected equipment.

For more information, see wiring diagram and signal description.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE), GENERATION 4.2**
- see **CHECKING WIRING AND TERMINALS**

CHECKING THE SOFTWARE, INFOTAINMENT CONTROL MODULE (ICM) (2003-2005)

CHECKING THE SOFTWARE, INFOTAINMENT CONTROL MODULE

FAULT-TRACING INFORMATION

Infotainment control module controls the volume for the parking assistance system.

Check that the latest available software for Infotainment control module is loaded in the vehicle by trying to buy an **upgrade** for the control module in question.

If an **upgrade** is available, continue to download the software according to the routine.

If it is not possible to purchase an **upgrade** this may mean that the latest available software already is installed in the vehicle.

To find out why purchase was not allowed, mark the row for the software purchase in question and click on Details.

NOTE: After checking the software, it is important to carry out a function check to verify that the problem has been remedied.

CHECKING THE SOUND SIGNAL FROM THE REAR SEAT ENTERTAINMENT DVD PLAYER TO THE VEHICLE'S ORDINARY SPEAKERS. REAR SEAT ENTERTAINMENT, GENERATION 4.1 (2006-2007)

CHECKING THE SOUND SIGNAL FROM THE REAR SEAT ENTERTAINMENT DVD PLAYER TO THE VEHICLE'S ORDINARY SPEAKERS.

FAULT-TRACING INFORMATION

If sound from the system for rear seat entertainment cannot be played in the vehicle's rear loudspeakers, the cause of the problem may be any or some of the following:

- Supply/fuse for the control module for rear audio separation
- Supply/fuse for the rear seat entertainment module (RSE)
- Cable harness from the vehicle's ordinary sound system.
- Cable harness between Rear seat entertainment module (RSE) and rear audio separation module.

Fig. 174: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

Fig. 175: Identifying Rear Audio Separation Module
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)

Checking the settings

Check that the volume is not turned down. Also check if the malfunction remains regardless of the chosen audio source. If the sound disappears when selecting a certain audio source, check the cables for loose connection or open circuit to that specific audio source. For further information, see the wiring diagram.

Checking the power supply to the control module for rear audio separation

When the sound is connected from the system for rear seat entertainment to the rear loudspeakers, a clicking sound shall be heard from an internal relay in the rear audio separation module (RAS). In this way it is possible to check that the control module has voltage feed and ground.

HINT: The control module is supplied with voltage via:

- #1. Power supply (30-supply)

HINT: The control module is grounded via:

- #9

Checking activation signal

To activate rear audio separation module (RAS), it must receive a high signal on the cable from Rear seat entertainment module (RSE).

Perform the following check.

- Switch on the ignition. Turn on the system for rear seat entertainment using the remote control.
- Insert a DVD or CD in the DVD-player and press the Play button. Select DVD-player as audio source via the remote control and check that sound comes either to the wireless headphones or the wired headphones (that are connected in the AUX-panel) in the place where DVD-player was selected as audio source.
- Press the button on the remote control to activate the sound for the rear loudspeakers. When the sound is connected from the system for rear seat entertainment to the rear loudspeakers, a clicking sound shall be heard from an internal relay in the rear audio separation module (RAS).
- Measure the voltage between the cable for activation of rear audio separation module (RAS) and ground. The voltage shall be approximately 7-9 V when the function is activated. If voltage on the cable is high, but the rear audio separation module (RAS) is not activated, the control module is probably damaged.

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR AUDIO SEPARATION**
- For further information about the fuses and relays, see the Wiring Diagram
- see **CONTROL MODULE REAR SOUND SEPARATION, REPLACING**
- see **CHECKING WIRING AND TERMINALS**

- **NO**

  Refer to **CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)

Audio signals function description

The sound signals that the rear audio separation module (RAS) processes can either come from the Rear seat entertainment module (RSE) or from the vehicle's ordinary sound system.

Normally, the control module leads the sound from the vehicle's ordinary sound system to the rear speakers but can, via activation from the Rear seat entertainment module (RSE), also transmit the sound from the AUX-panel or DVD-player to the rear speakers.

Checking the audible warning signal

If sound can be heard in the headphones but not in the rear speakers - check the cables between Rear seat entertainment module (RSE) and rear audio separation module (RAS) for loose connection, short-circuiting or open circuit.

Remedy as necessary.

Control module for rear audio separation and speaker wiring

Check the cables from rear audio separation module (RAS) to the speakers for loose connection, open circuit and short-circuiting to ground and voltage. Also check the intermediate connectors.

If no other malfunction has been found, then the rear audio separation module (RAS) can be suspected as probable malfunction source.

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE), GENERATION 4.1**

CHECKING THE SOUND SIGNAL FROM THE REAR SEAT ENTERTAINMENT DVD PLAYER TO THE VEHICLE'S ORDINARY SPEAKERS. REAR SEAT ENTERTAINMENT, GENERATION 4.2 (2007-2008)

CHECKING THE SOUND SIGNAL FROM THE REAR SEAT ENTERTAINMENT DVD PLAYER TO THE VEHICLE'S ORDINARY SPEAKERS.

FAULT-TRACING INFORMATION

Sound from the system for rear seat entertainment to the integrated audio module (IAM) goes via the AUX input. If sound from the system for rear seat entertainment cannot be played in the vehicle's loudspeakers, the cause of the problem may be any or some of the following:

- Cable harness from the vehicle's ordinary sound system.
- AUX input
- Damaged leads between the Rear seat entertainment module (RSE) and the AUX-input.

HINT: In order for sound from the system for rear seat entertainment to be played in the vehicle's loudspeaker system, the system for rear seat entertainment must be on and work faultlessly.

Fig. 184: Identifying Rear Seat Entertainment Module (RSE)
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING THE WIRING FOR THE REAR SEAT ENTERTAINMENT MODULE (RSE)

HINT: In order for sound to be heard from the vehicle's loudspeakers, the function must be activated using the remote control for the system for rear seat entertainment (button for loudspeakers), the vehicle's audio system must be set to AUX and no other source must be connected to the AUX input.

Check that the volume is not turned down.

Check the cables from the Rear seat entertainment module (RSE) to the Integrated Audio Module (IAM). Check for a short-circuit to ground, for a short-circuit to supply and for an open circuit. Regards the cables from rear seat entertainment module (RSE), terminals #D3, #D16 and #D17, to the AUX-input.

Check the connection between the AUX input and the Integrated Audio Module (IAM). Check for a short-circuit to ground, for a short-circuit to supply and for an open circuit. Regards the cables from the AUX input to integrated audio module (IAM) terminals #C2:10, #C2:11 and #C2:12.

Also check the breaker function at the AUX input by connecting a plug into the AUX input. The connection between the Rear seat entertainment module (RSE) and the integrated audio module (AIM) should then be broken.

- AUX-input terminal #1 is internally connected with terminal #7 in the AUX input.
- AUX-input terminal #2 is internally connected with terminal #6 in the AUX input. The circuit is broken if a 3.5 mm connector is connected.
- AUX-input terminal #3 is internally connected with terminal #5 in the AUX input. The circuit is broken if a 3.5 mm connector is connected.

Remedy as necessary.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CHECKING THE SYSTEM. REAR SEAT ENTERTAINMENT, GENERATION 3.2 (2005-2006)

CHECKING THE SYSTEM

INFORMATION

If no screens work and the malfunction cannot be connected to a special function, e. g., when the aux-input is used, the malfunction cause may be:

- Contact resistance in the terminals.
- One or both screens not connected.
- Open-circuit in the cable between the display screen and the Rear Seat Entertainment Module (RSE) (Y-shaped cable).
- Voltage supply to the screen or Rear Seat Entertainment Module (RSE).
- Damaged display screen.
- Damaged rear seat entertainment module (RSE).

- **Continue**

  Refer to **CHECKING THE FUNCTION**

CHECKING THE FUNCTION

Fig. 186: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

- Ignition on.
- Switch on the system using the remote control pointed directly at one of the display screens.

  Check that none of the display screens have been turned off using the remote control.

  Check the function of the system by changing the video source. Ensure that the infra red (IR) receiver on the lower section of the display screen is not blocked.

  Check the batteries in the remote control. Replace them if they are defective.

Can the system be turned on?

- **YES**

  FAULT NOT FOUND: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE POWER SUPPLY**

CHECKING THE POWER SUPPLY

NOTE: Switch off the system before connecting/disconnecting a connector.

Check that the fuse for the Rear Seat Entertainment Module (RSE) is intact.

Check that there is voltage to the fuse holder. The voltage must be approximately 10-14 V.

Disconnect the lower connector for the left-hand display screen. Turn on the ignition and try to turn on the system by aiming the remote control at the right screen. If the system can now be switched on the fault has probably been traced.

If the system still cannot be switched on: Turn off the ignition. Disconnect the lower connector for the right-hand display screen. Reconnect the lower connector for the left-hand display screen. Turn on the ignition and try to turn on the system by aiming the remote control at the left screen. If the system can be turned on now, change place of the two head rests to confirm that the malfunction 'changes place'.

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- For further information about the fuses and relays, see the Wiring Diagram
- see **HEAD RESTRAINT WITH TV SCREEN, REPLACING**
- see **CONTENTS**

Does the rear seat entertainment system work?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE DISPLAY SCREENS**

CHECKING THE DISPLAY SCREENS

NOTE: Switch off the system before connecting/disconnecting a connector.

Disconnect the connector from the one display screen. Turn on the system and investigate the trouble symptom. If the malfunction still exists, check in the same way but reinstall the first connector for the other screen.

Checking the head restraints

Minimize fault-tracing by swapping the position of the two head restraints to, see if the fault "follows". Change places of the head rests and check the trouble symptom.

HINT: It is unusual for a screen to break.

Checking the remote control signal

Checking the wiring

Turn off the ignition.

Check the wiring and connectors between the display screens. Check for damage or oxidation. Check for a short-circuit to ground. Check for a short-circuit to supply voltage. Also check the connector on the Rear Seat

Entertainment Module (RSE). Check for damage and oxidation. Remedy as necessary.

Checking IR-signal, left screen

Check the cable between the upper connector to the display screen terminal #4 and Rear Seat Entertainment Module (RSE) terminal #A4. Check for an open-circuit.

Check the cable between the upper connector to the display screen terminal #5 and Rear Seat Entertainment Module (RSE) terminal #A5. Check for an open-circuit.

Connect the head restraint, turn on the ignition and measure the voltage on connection #5 for the screen. The voltage must be 4-5 V.

To check the voltage level on signal cable for IR-signal #4, proceed as follows:

1. Connect all cables and connectors.
2. Measure the voltage between the signal cable for the Infra Red (IR) signal to the left-hand display screen and ground. The voltage must be 4-5 V.

   NOTE: Do not press any of the buttons on the remote control during this measurement. Measure from the rear side of a suitable connector. Do not damage the terminals in the connector.

3. Aim the remote control at the left screen and press in a button on the remote control. The voltage on the signal cable must fall to approximately 3.5 V for as long as the button on the remote control is pressed in.

Checking IR-signal, right screen

Check the cable between the upper connector to the display screen terminal #4 and Rear Seat Entertainment Module (RSE) terminal #A14. Check for an open-circuit.

Check the cable between the upper connector to the display screen terminal #5 and Rear Seat Entertainment Module (RSE) terminal #A15. Check for an open-circuit.

Connect the head restraint, turn on the ignition and measure the voltage on connection #5 for the screen. The voltage must be 4-5 V.

Compare the latest reading as above with the signal for the infra red (IR) signal from the right-hand infra red (IR) receiver for the display screen.

Conclusion

If the result of the above checks is that no malfunction was found, this means that the receivers in both screens work and that the remote control is OK. If voltages on the cables are OK but a lower voltage cannot be measured when a button on the remote control is pressed down, try with replacing the remote control.

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**

- For further information about the fuses and relays, see the Wiring Diagram.
- see **HEAD RESTRAINT WITH TV SCREEN, REPLACING**
- see **CHECKING WIRING AND TERMINALS**

Fig. 187: Identifying Cable Connector To Display Screen/Head Restraint
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING SERIAL COMMUNICATION TO SCREENS**

CHECKING SERIAL COMMUNICATION TO SCREENS

Fig. 188: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

- Ignition on.
- Switch on the system using the remote control.

  Check if the screens flicker once or flicker continuously when the system is turned on.

Fig. 189: Identifying Cable Connector To Display Screen/Head Restraint
Courtesy of VOLVO CARS CORPORATION

Do the display screens flicker when the power is switched on?

- **YES**

  Refer to **CHECKING SERIAL COMMUNICATION TO SCREENS 1**

- **NO**

  Refer to **CHECKING VOLTAGE TO REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING SERIAL COMMUNICATION TO SCREENS 1

Fig. 190: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

- Restore cables and contacts.
- Ignition on.

  Check the voltage on the serial connections between Rear Seat Entertainment Module (RSE) and the screens (4 cables). In all cases the voltage shall be approx. 2.5 V.

  HINT: It is easier to take measurements at the upper connector for the display screens.

  Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**
- see **HEAD RESTRAINT WITH TV SCREEN, REPLACING**
- see **CHECKING WIRING AND TERMINALS**

Fig. 191: Identifying Cable Connector To Display Screen/Head Restraint
Courtesy of VOLVO CARS CORPORATION

Is the voltage below 2 V for any measurement?

- **YES**

  Refer to **CHECKING SERIAL COMMUNICATION TO SCREENS 2**

- **NO**

  Refer to **CHECKING VOLTAGE TO REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING SERIAL COMMUNICATION TO SCREENS 2

Loosen the lower connector in the seat where the previous measurement was below 2 V.

Take readings from the same cable as before in the lower connector.

If voltage in the lower connector now is approx. 2.5 V, the screen in question is probably defective.

Remedy as necessary.

Other information

- see **SIGNAL SPECIFICATION, REAR SEAT ENTERTAINMENT MODULE (RSE)**
- see **REAR SEAT ENTERTAINMENT MODULE (RSE), REPLACING**

- see **HEAD RESTRAINT WITH TV SCREEN, REPLACING**
- see **CHECKING WIRING AND TERMINALS**

Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING VOLTAGE TO REAR SEAT ENTERTAINMENT MODULE (RSE)**

CHECKING VOLTAGE TO REAR SEAT ENTERTAINMENT MODULE (RSE)

Fig. 193: Checking Traffic Load On CAN Cables
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Check the voltage feed to Rear Seat Entertainment Module (RSE).

  HINT: The control module has two voltage feeds.

HINT: At ignition on, the voltage shall be battery voltage on both feeds.

Also check the ground connection to the control module.

If no other malfunction has been found, try with replacing Rear Seat Entertainment Module (RSE).

ACCESSORIES AND EQUIPMENT

Media, Communication And Navigation - Symptom Verification

INFORMATION AND VERIFICATION, AUDIO OTHER (2003-12)

INFORMATION AND VERIFICATION, AUDIO OTHER

Symptom and function description

Messages and information about the climate control unit and audio system are shown in the display.

The display on the audio unit lights up in key position I or when the vehicle starts.

The display is of the LCD type and is equipped with a warm up system so that it is not slow at low temperatures.

When the temperature on the display's surface is below 0°C, warm-up comes on and when the temperature on the display's surface is greater than 20°C,

Verification

Access to the vehicle is necessary for the following checks.

- Ignition on.

Does the display light?

HINT: If the display lights up slowly when cold, this may be due to faulty warm-up of the display.

INFORMATION AND VERIFICATION, MOBILE TELEPHONE (2003-12)

INFORMATION AND VERIFICATION, MOBILE TELEPHONE

Symptom and function description

The telephone's system's functions can only be used when the telephone is in the active position. When the telephone system is deactivated, no phone calls can be received.

In standby, the audio system can be in operation at the same time as the call is received. In standby, it is not possible to make a call.

When the telephone system is activated or is in standby, a handset is shown in the display.

When the telephone is activated, the keypad in the steering wheel only controls the telephone functions. To control the audio system, the telephone must be in standby.

The call volume is controlled using the buttons in the steering wheel's keypad. If the handset is used, the volume can be controlled using a knob on the side of the handset.

The telephone uses the audio system's loudspeakers. Sound volume mutes temporarily during a phone call. At the end of a call, the sound volume resumes to its original volume. If the volume is controlled during the phone call, the new level is maintained after the call has ended.

The Phone module (PHM) determines whether the call is to be connected via hands free or handset from the cradle signal. When the handset is in the holder, all voice calls are handsfree. The handset is activated when it is removed from the holder. If the handset is lifted when a phone call is started, the sound will be emitted from the hands free system

The telephone can only be used together with a valid SIM card (Subscriber Identity Module). Card supplied by network operators. In the event of a problem with the card, contact the network operator.

For more information, see Design and Function.

Verification

Access to the vehicle is necessary for the following checks.

- Ignition on.
- Activate the carphone.

Make a call so that both the handset and the hands-free system are used. See the instruction manual.

Check that the following functions work as they should:

- Handset
- Hands free system.
- Steering wheel's keypad.
- Keypad on the center console.

SYMPTOM AND FUNCTION DESCRIPTION (2011-12)

Problem with synchronising the telephone book or calls list between certain mobile telephones and Bluetooth phone module (BPM) may be due to too many calls in the calls list.

The telephone book cannot be synchronised if calls list transfer takes longer than 20 seconds.

- Erase call from calls list for a better result.

Verification

Certain mobile telephones require manual transfer of the telephone book using business cards. Follow the instructions below to transfer the entire telephone book from the mobile telephone to the Bluetooth phone

module (BPM).

- Pair the mobile telephone with the Bluetooth phone module (BPM). See www. volvocars. com/bluetooth for further information.
- Enter the mobile telephone's menu and select Telephone book.
- Select Option - Mark/Unmark- Select all.
- Select Option - Send Business card.
- Select "Via bluetooth".
- Select "My Car". All entries in the telephone book are now transferred to the Bluetooth phone module (BPM).
- The telephone book should now be in the Bluetooth menu in the Bluetooth phone module (BPM).

EXTERIOR/INTERIOR TRIM

Body and interior

EXTERIOR/INTERIOR TRIM

COMBINED INSTRUMENT PANEL SURROUND

REPLACING COMBINED INSTRUMENT PANEL SURROUND

Fig. 1: Combined Instrument Panel Surround Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- screws (2) on the top of the surround.
- the surround

Install:

In reverse order.

COMPONENTS, COOL BOX REAR SEAT, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

This service information contains procedures for:

- the entire cover. See **COVER ASSEMBLY, REPLACING**
- the lock on the cover. See **LOCK COVER, REPLACING**
- the blower fan motor. See **REPLACING BLOWER FAN MOTOR**
- the switch. See **SWITCH, REPLACING**.

COVER ASSEMBLY, REPLACING

REMOVING THE COVER ASSEMBLY

Fig. 2: Identifying Console Cover And Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the cover.

Transfer the hinges and the retaining strap to the new cover.

INSTALLING THE COVER ASSEMBLY

Install:

- the cover
- the hinges
- the retaining strap.

LOCK COVER, REPLACING

REMOVING THE LOCK COVER

Fig. 3: Identifying Console Cover And Lock
Courtesy of VOLVO CARS CORPORATION

Grip the lock using heavy duty pliers.

Pull straight out in line with the cover whilst working the lock back and forth.

Pull heavily until the lock releases.

NOTE: The lock is secured by two plastic hooks which break when the lock releases.

Check that there are no loose plastic pieces where the old lock was positioned.

INSTALLING THE LOCK COVER

Fig. 4: Identifying Lock Inserted In Correct Position
Courtesy of VOLVO CARS CORPORATION

Insert the lock in the correct position.

Press so that the hooks engage securely.

REPLACING BLOWER FAN MOTOR

REMOVING THE BLOWER FAN MOTOR

Fig. 5: Identifying Blower Fan Motor Screws
Courtesy of VOLVO CARS CORPORATION

Turn the coolbox upside down.

Remove the 16 screws.

NOTE: Do not slacken off the screws for the fan.

Remove the fan shroud.

NOTE: Do not damage the cable for the fan.

Fig. 6: Identifying Printed Circuit Board Fan Switch
Courtesy of VOLVO CARS CORPORATION

Remove the switch for the fan from the printed circuit board.

The switch is secured using hot adhesive, so it may need to be cut out.

Fig. 7: Identifying Fan Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws for the fan.

Lift out the fan.

INSTALLING THE BLOWER FAN MOTOR

Install:

- the engine coolant fan (FC)
- the 4 screws for the fan. Tighten
- the switch for the fan in the printed circuit board. Secure using hot adhesive
- the fan shroud
- the 16 screws for the fan shroud. Tighten.

SWITCH, REPLACING

REMOVING THE SWITCH

Remove the 16 screws. See **REPLACING BLOWER FAN MOTOR**.

NOTE: Do not slacken off the screws for the fan.

Remove the fan shroud. See **REPLACING BLOWER FAN MOTOR**.

NOTE: Do not damage the cable for the fan.

Fig. 8: Identifying Switch Cables
Courtesy of VOLVO CARS CORPORATION

Detach the 2 cables from the switch.

HINT: Mark up the cables before removal.

The switch is secured using hot adhesive.

Cut away the adhesive using a sharp knife.

Press out the switch.

Fig. 9: Identifying Switch
Courtesy of VOLVO CARS CORPORATION

Heat both the cables so that they release from the switch. Use a soldering iron.

HINT: Mark up the cables before removal.

INSTALLING THE SWITCH

Solder both the small cables onto the switch.

Install:

- the switch.

Secure the switch using hot adhesive.

- the 2 cables for the switch
- the fan shroud. See **REPLACING BLOWER FAN MOTOR**
- the screws for the fan shroud. See **REPLACING BLOWER FAN MOTOR**.

FENDER EXTENSION, REPLACING

Special tools:

see **9512942**

see **9512949**

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING FENDER EXTENSIONS

Fig. 10: Removing Front Inner Fender
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 6 rivets from the front fender liner. See **REMOVING RIVET**

Fig. 11: Removing Rear Inner Fender
Courtesy of VOLVO CARS CORPORATION

- the 4 rivets from the rear fender liner. See **REMOVING RIVET** .

Fig. 12: Removing Tape Residue
Courtesy of VOLVO CARS CORPORATION

Detach the covered clips and the double-sided adhesive tape by pulling straight out.

The front molding has five clips, the rear has six.

HINT: Use a weatherstrip tool to facilitate removal. Start at the front or rear edge of the molding.

Remove any tape residue. Use: see **9512942** and: see **9512949** .

INSTALLING FENDER EXTENSIONS

NOTE: **Always use a new molding and new clips when installing.**

NOTE: **The car must be at least room temperature, i. e. warmer than 20 °C in order for the tape to bond correctly.**

Fig. 13: Identifying Fender Extension Tape
Courtesy of VOLVO CARS CORPORATION

Wash the area for the molding. Use a 50/50 mixture of isopropanol and water.

Wipe dry using a clean lint-free cloth.

Locate the locating pins and clips for the molding in the holes.

Press down along the entire length of the molding, Check that the clips snap into the fender.

HINT: Remove approximately 50 mm of the backing from the molding before pressing it into place. This will make it easier to remove the remaining backing.

Fig. 14: Identifying Fender Extension Tape
Courtesy of VOLVO CARS CORPORATION

Fig. 15: Installing Front Fender Extension
Courtesy of VOLVO CARS CORPORATION

Check the position of the molding.

Remove the rest of the backing from the tape and press the molding hard by hand so that the tape secures correctly to the fender.

Install 5 new rivets on the front and 4 on the rear molding.

Fig. 16: Installing Rear Fender Extension
Courtesy of VOLVO CARS CORPORATION

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

FLOOR CARPET, FRONT, REPLACING

FLOOR CARPET, FRONT, REPLACING

Remove:

- the seat from car according to:

  see **LIFTING THE FRONT SEATS IN AND OUT**

- the front sill trim panel. See **SILL TRIM PANEL FRONT SIDE DOOR**
- the soundproofing panel. See **SOUNDPROOFING PANEL, REPLACING** .

Lift out the carpet.

Install:

In reverse order.

FLOOR CARPET, REAR, REPLACING

FLOOR CARPET, REAR, REPLACING

Fig. 17: Identifying Cushion Clip And Screwdrivers
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See:

  see **LIFTING THE FRONT SEATS IN AND OUT**

- the center console. See **CENTER CONSOLE, REPLACING**
- the rear-seat seat cushion. See **CUSHION**.
- cushion clip.

  Carefully lift each end.

  Use a weatherstrip tool or a large screwdriver

- the rear sill trim panel. See **SILL TRIM PANEL, REPLACING**
- the front sill trim panel. See **FRONT DOOR SILL TRIM PANEL**.

- the power amplifier (radio) if applicable: Remove the two screws.

Lift up the carpet at the rear edge.

Pull the carpet backwards.

Lift out the carpet.

Install:

In reverse order.

CUSHION

REMOVING THE CUSHION

Fig. 18: Identifying Seat Cushion On Rear Seat Lifted Up By Pulling Strap
Courtesy of VOLVO CARS CORPORATION

- Tighten the strap to release the locking
- Fold the cushion up 45 degrees
- Release the locking. Lift in lengthwise.

NOTE: Lift at the front of the cushion, not the strap.

INSTALLATION

Install:

In reverse order.

FRONT DOOR SILL TRIM PANEL

REMOVING THE SILL TRIM PANEL

Fig. 19: Identifying Sill Trim Panel
Courtesy of VOLVO CARS CORPORATION

- Pull the sill trim panel to release the front clip (1)
- Angle out the front edge of the frame (2)
- Detach the rear edge
- Pull out.

INSTALLING THE SILL TRIM PANEL

Install:

In reverse order.

GLOVE COMPARTMENT, REPLACING

GLOVE COMPARTMENT, REPLACING

Remove the soundproofing panel on the passenger side. See **SOUNDPROOFING PANEL, REPLACING** .

Open the glove compartment.

Fig. 20: Locating Hooks On Each Side
Courtesy of VOLVO CARS CORPORATION

Slide the two hooks on each side past the tabs.

Remove the gas strut by pulling it straight out.

Fig. 21: Identifying Glove Compartment Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- ten screws
- the connector for the glove compartment lighting
- the connector for the foot well lighting
- the glove compartment.

Install:

In reverse order.

Transfer those components that do not need to be replaced.

DOOR LOCKS & ANTI-THEFT SYSTEMS

Body and interior

DOOR LOCKS & ANTI-THEFT SYSTEMS

DRIVER'S DOOR MODULE / PASSENGER DOOR MODULE (DDM/PDM), REPLACING

- Replacing the driver's side door module. See **DRIVER DOOR MODULE (DDM), REPLACING**
- Replacing the passenger side door module. See **PASSENGER DOOR MODULE (PDM), REPLACING** .

DRIVER DOOR MODULE (DDM), REPLACING

PREPARATIONS

CAUTION: New software can only be ordered when the control module is installed in the car. VIDA reads off the new control module identity which is required to order the correct software.

Always check that the control module and control module box connectors do not have bent or damaged terminals or sockets. This may have been the cause of the fault.

REMOVING THE DRIVER DOOR MODULE (DDM)

Fig. 1: Driver Door Module (DDM)
Courtesy of VOLVO CARS CORPORATION

Ignition off.

Remove:

- the door panel, see **PANEL FRONT SIDE DOOR, REPLACING** .
- the nut and screw holding the control module in place
- the connectors.

Pull up the rear edge of the door module.

Pull the control module backwards and upwards.

Detach the control module from the mounting on the door panel.

Press up the control module.

Disconnect the catches. Lift the upper panel from the control module.

NOTE: Check that the control module connectors are intact.

INSTALLING THE DRIVER DOOR MODULE (DDM)

Install the upper panel.

Position the control module in the hole on the door panel.

Check that the lower mounting for the control module is correctly located in the support on the door panel.

Press the control module into place.

Install:

- the connectors
- the nut and screw
- the door panel, see **PANEL FRONT SIDE DOOR, REPLACING** .

FINISHING

Initialize the window position in the communication input.

DOOR LOCKS & ANTI-THEFT SYSTEMS

Body and interior

DOOR LOCKS & ANTI-THEFT SYSTEMS

IGNITION KEY/REMOTE CONTROL, ADDITION/REPLACING/ERASING

NOTE: As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

IGNITION KEY/REMOTE CONTROL, ADDITION/REPLACING/ERASING

CAUTION: When replacing an ignition key or remote control, the new unit must be programmed.

Both software and the code on the packaging are required to add a new remote control.

Only the software is required to erase a remote control.

Only the software is required to add an ignition key.

IGNITION KEY PROGRAMMING/ERASING

First order the software. See 9438428 .

REMOTE CONTROL PROGRAMMING/ERASING

First order the software. See 9438429 .

FINISHING

Check the function after programming an ignition key or remote control.

MODEL YEAR 2004

NOTE: 2004 sees the introduction of an ignition key integrated with the remote control.

REMOVING KEYS FROM THE REMOTE CONTROL

Fig. 1: Identifying Key Battery Cover Removal
Courtesy of VOLVO CARS CORPORATION

Fold out the key and remove the battery cover.

Fig. 2: Identifying Key, Remote Control Unit, And Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw and separate the unit.

INSTALLING KEYS IN THE REMOTE CONTROL

Install

- the key

NOTE: Always use a new key when installing.

- the screw
- the cover.

LOCK MECHANISM, TAILGATE, REPLACING

REMOVING THE TAILGATE LOCK

Fig. 3: Identifying Upper/Lower Tailgate Panel, Screws, Disconnecting Connector And Link, And Pulling Out Lock
Courtesy of VOLVO CARS CORPORATION

- Remove the upper tailgate panel. See **PANEL, TAILGATE, REPLACING**
- Remove the lower tailgate panel. See **LOWER TAILGATE PANEL**
- Remove the three screws
- Disconnect the connector
- Disconnect the link
- Pull out the lock.

INSTALLING THE TAILGATE LOCK

Install:

In reverse order.

NOTE: Adjust the lock. See STRIKER PLATE, ADJUSTING.

STRIKER PLATE, ADJUSTING

STRIKER PLATE, ADJUSTING

Fig. 4: Identifying Removal Of Cover From Tailgate Sill Trim Panel
Courtesy of VOLVO CARS CORPORATION

- Remove the cover from the tailgate sill trim panel
- Slacken off the screw
- Adjust the tailgate. See **DOORS / HOOD / TAILGATE, ADJUSTMENT CHART**
- Install the cover.

LOWER TAILGATE PANEL

REMOVING THE REAR DOOR PANEL

Fig. 5: Identifying Screws And Lower Tailgate Panel
Courtesy of VOLVO CARS CORPORATION

- Remove 2 screws on each side
- Begin by detaching the panel at the window (eight covered clips in total).

NOTE: When removing, note the position of the screws (the screws are two different lengths).

INSTALLING THE REAR DOOR PANEL

Install:

In reverse order.

NOTE: Ensure that the guide pins are correctly position before pushing the panel into place.

NOTE: Ensure that the clips click when they are pressed into place.

PASSENGER DOOR MODULE (PDM), REPLACING

PREPARATIONS

CAUTION: New software can only be ordered when the control module is installed in the car. VIDA reads off the new control module identity which is required to order the correct software.

Always check that the control module and control module box connectors do not have bent or damaged terminals or sockets. This may have been the cause of the fault.

REMOVING THE PASSENGER DOOR MODULE (PDM)

Fig. 6: Removing Passenger Door Module (PDM)
Courtesy of VOLVO CARS CORPORATION

Ignition off.

Remove:

- the door panel, see **PANEL FRONT SIDE DOOR, REPLACING** .
- the nut and screw holding the control module in place
- the connectors.

Grasp the underneath of the control module. Press upwards. Carefully pull the module from the lower catches.

Fig. 7: Identifying Upper Catches Released Using Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

Release the upper catches using a weatherstrip tool. Lift out the control module.

NOTE: Check that the control module connectors are intact.

INSTALLING THE PASSENGER DOOR MODULE (PDM)

Press the control module into place.

Install:

- the connectors
- the nut and screw
- the door panel, see **PANEL FRONT SIDE DOOR, REPLACING** .

Ordering software

Order software for the passenger door module (PDM) according to the table below.

XC90	9438296

FINISHING

Initialize the window position in the communication input.

GAUGES & INSTRUMENT PANELS

Body and interior

GAUGES & INSTRUMENT PANELS

DRIVER INFORMATION MODULE (DIM), REPLACING

COMBINED INSTRUMENT PANEL

REMOVAL AND INSTALLATION

CAUTION: The customer-programmed data must be read off before the control module is replaced. The information must then be entered into the new control module after it has been installed. This is carried out via VIDA vehicle communication.

Remove / install the combined instrument panel. See **DRIVER INFORMATION MODULE (DIM), REPLACING** .

OUTSIDE TEMPERATURE SENSOR

Body and interior

OUTSIDE TEMPERATURE SENSOR DOOR MIRROR, REPLACING (-2006)

REMOVAL

PREPARATORY WORK

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

Ignition off.

Remove the door mirror. See **REAR VIEW MIRROR, REPLACING** .

REMOVING THE OUTSIDE TEMPERATURE SENSOR

Fig. 1: Removing/Installing Outside Temperature Sensor
Courtesy of VOLVO CARS CORPORATION

- Remove the temperature sensor using a screwdriver as shown in the illustration
- Disconnect the terminal pin from connector
- Remove the temperature sensor.

INSTALLATION

INSTALLING THE OUTSIDE TEMPERATURE SENSOR

Route the cable for the temperature sensor to the connector.

Install the terminal pin in the connector.

Press the temperature sensor in the door mirror.

FINISHING WORK

Remove the door mirror. See **REAR VIEW MIRROR, REPLACING** .

MODEL YEARS 2004-

PREPARATORY WORK

Ignition off.

Remove the door mirror. See **REAR VIEW MIRROR, REPLACING** .

REMOVAL

Fig. 2: Identifying Ignition In OFF Position
Courtesy of VOLVO CARS CORPORATION

Remove the temperature sensor using a screwdriver as shown in the illustration

Remove:

- the connector
- the terminal pins from the connector
- the temperature sensor.

INSTALLATION

Fig. 3: Locating Outside Temperature Sensor
Courtesy of VOLVO CARS CORPORATION

Route the cable for the temperature sensor to the connector.

Install:

- the cable terminals in the connector
- the connector
- the temperature sensor in the door mirror
- the door mirror. See **REAR VIEW MIRROR, REPLACING** .

OUTSIDE TEMPERATURE SENSOR (2007-)

Remove the following items:

- door mirror's electric motor. See **MOTOR, EXTERNAL MIRROR**
- mirror cover. See **COVER, EXTERNAL MIRROR** .

NAVIGATION SYSTEM

Body and interior

NAVIGATION SYSTEM

CD READER, RTI (ROAD TRAFFIC INFORMATION), REPLACING

REMOVAL

Fig. 1: CD Reader, RTI
Courtesy of VOLVO CARS CORPORATION

- Fold down the side panel on the left-hand side of the cargo compartment
- Remove the front and lower screws
- Loosen the other screws a few turns
- Unhook the changer and bracket and lift it up
- Disconnect the connectors
- Remove the screws for the bracket and changer. Detach the changer.

INSTALLATION

In reverse order.

SEATS

Body and interior

SEATS

BACKREST CATCHES

REMOVING BACKREST CATCHES

Fig. 1: Identifying Three Screws & Lock Side Piece
Courtesy of VOLVO CARS CORPORATION

Remove:

- the lock side piece according to **LOCK SIDE PIECE** .
- the three screws.

NOTE: Never lock a removed catch by pressing the arm (1).

INSTALLING BACKREST CATCHES

Fig. 2: Aligning Locking Arm With Indicator Button On Side Piece
Courtesy of VOLVO CARS CORPORATION

Install:

In reverse order.

NOTE: **The catch must be open during installation.**

NOTE: **Align the locking arm (2) with the indicator button on the side piece.**

NOTE: **If the backrest is equipped with a cargo net: Check that the lever for the recline angle function is in the correct position.**

BRACKET (CROSS STAY)

REPLACING BRACKET (CROSS STAY)

HINT: Adjust the seat to the upper position at front and back, otherwise the bracket cannot be removed.

Remove the seat from the car according to .

Fig. 3: Identifying Screw, Clip In Bracket, Connectors, Panel And Bracket
Courtesy of VOLVO CARS CORPORATION

Remove one screw.

Press out the clip in the bracket.

Disconnect connectors.

Lift the panel up.

Remove the bracket.

Install:

In reverse order and according to

.

CENTER HEAD RESTRAINT

REMOVING THE CENTRAL HEAD RESTRAINT

Fig. 4: Identifying Headrest & Side Piece
Courtesy of VOLVO CARS CORPORATION

- Lift up the head restraint.
- Remove the side piece according to **SIDE PIECE** .
- Remove the button for the head restraint.
- Insert a small screwdriver and press out lock spring.
- Detach the head restraint by pulling it straight up.

INSTALLING THE CENTRAL HEAD RESTRAINT

Install:

In reverse order.

SEATS

Body and interior

SEATS

CUSHION

CUSHION, REPLACING

Fig. 1: Identifying Front Edge Of Cushion
Courtesy of VOLVO CARS CORPORATION

First lift the bottom edge of the end of the cushion.

Lift the front edge of the cushion.

NOTE: The cushion may be securely attached.

Lift out the cushion.

NOTE: Check that the cushion clips are intact.

If not: Replace.

INSTALLATION

Install in reverse order.

NOTE: **Check that the front edge of the cushion did not deform when it was removed.**

The front / lower edge of the cushion must be straight.

ELECTRIC MOTOR, CUSHION, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

INFORMATION

METHOD CONTENT

This method consists of:

- see **ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT, REPLACING**
- see **ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT, REPLACING**
- see **ELECTRIC MOTOR FRONT-REAR ADJUSTMENT, REPLACING**.

ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT, REPLACING

REMOVING THE ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT

Fig. 2: Identifying M6 & M8 Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See: **FRONT SEAT, REPLACING**
- the 1 M6 screws (2)
- the M8 screw (2).

Fig. 3: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove the connector by sliding it to one side.

INSTALLING THE ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Install:

- the connector
- the electric motor
- the 2 M6 screws
- the 1 M8 screw
- the front seat. See: **FRONT SEAT, REPLACING**.

ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT, REPLACING

REMOVING THE ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT

Fig. 4: Electric Motor Rear Height Adjustment
Courtesy of VOLVO CARS CORPORATION

Raise the seat to the uppermost position.

Remove:

- the side panel. See: **SIDE PANEL FRONT SEAT, REPLACING**
- the tie strap (2)
- the 3 screws (1).

Courtesy of VOLVO CARS CORPORATION

- the 1 M6 screw
- the electric motor.

Fig. 6: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove the connector by sliding it to one side.

INSTALLING THE ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Install:

- the connector
- the electric motor
- the 3 M6 screws
- the 1 M6 screw
- the tie strap
- the side panel. See: **SIDE PANEL FRONT SEAT, REPLACING** .

ELECTRIC MOTOR FRONT-REAR ADJUSTMENT, REPLACING

REMOVING ELECTRIC MOTOR FRONT-REAR ADJUSTMENT

Fig. 7: Electric Motor And Mechanical Cables
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See: **FRONT SEAT, REPLACING**
- the 2 M5 screws
- the electric motor and the mechanical cables.

Fig. 8: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove the connector by sliding it straight backwards.

INSTALLING THE ELECTRIC MOTOR FRONT-REAR ADJUSTMENT

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Fig. 9: Securing Short Mechanical Cable In A Power Screwdriver And Screw Until Rails Are Equal
Courtesy of VOLVO CARS CORPORATION

HINT: If the distance between the two rails differs, secure the short mechanical cable in a power screwdriver and screw until the rails are equal.

Install:

- the connector
- the electric motor and the mechanical cables
- the 2 M5 screws
- the front seat. See: **FRONT SEAT, REPLACING**.

FRONT SEAT, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

IGNITION OFF

Fig. 10: Identifying Ignition In OFF Position
Courtesy of VOLVO CARS CORPORATION

Ignition off.

REMOVAL

REMOVING THE FRONT SEAT

Fig. 11: Front Seat Side Panel & Front Screws For Seat
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 panels located above the front screws for the seat
- the 4 x M10 screws
- the front seat side panel. See: **SIDE PANEL FRONT SEAT, REPLACING**
- the end mounting. See: **END MOUNTING, REPLACING**
- the screw. Remove the connector under the seat.

Lift out the seat.

CAUTION: Two people are required for this procedure to prevent damage to the interior trim or the seat.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE FRONT SEAT

Install the seat.

CAUTION: Two people are required for this procedure to prevent damage to the interior trim or the seat.

Install:

- the connector using the screw
- the 4 x M10 screws
- the 2 panels
- the end mounting. See: **END MOUNTING, REPLACING**
- the side panel. See: **SIDE PANEL FRONT SEAT, REPLACING** .

END MOUNTING, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVAL

REMOVING FRONT END MOUNTINGS

Fig. 12: Identifying Weatherstrip Tool And Seat Belt End Mounting
Courtesy of VOLVO CARS CORPORATION

Move the front seat as far forward as possible.

Remove the side panel. See: **SIDE PANEL** (-2004) or: **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

NOTE: Use a weatherstrip tool to disconnect the seat belt from the end mounting. Carefully press the locking tab, as shown in the illustration.

Remove the screw from the seat. Remove the end mounting.

INSTALLATION

INSTALLING FRONT END MOUNTINGS

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Fig. 13: Identifying Seat Belt And End Mounting
Courtesy of VOLVO CARS CORPORATION

Install:

- the end mounting
- the M10 screw. Tighten.

Press the seat belt into the end mounting.

NOTE: A clear click is heard when the seat belt has locked correctly with the end mounting.

NOTE: Also check that the seat belt has locked correctly with the end mounting by looking at the reverse of the end mounting.

Correct locking position: refer to **A** in, see **Fig. 13**.

Incorrect locking position: refer to **B** in, see **Fig. 13**. If the lock facing does not lock correctly with the end mounting, replace the end mounting with a **new** one.

NOTE: Check that the seat belt is secure by jerking it hard in an upwards direction.

Reinstall the side panel. See: **SIDE PANEL** (-2004) or: **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

HEIGHT ADJUSTMENT MOTOR, FRONT / REAR

REMOVING THE FRONT HEIGHT ADJUSTMENT MOTOR

Fig. 14: Front Height Adjustment Motor
Courtesy of VOLVO CARS CORPORATION

Remove the seat from the car. See **LIFTING THE FRONT SEATS IN AND OUT** .

Disconnect the connector at the control module or the connector at the motor.

NOTE: Carefully release the catches on the connector.

Remove:

- the tie strap
- the two screws.

INSTALLING THE FRONT HEIGHT ADJUSTMENT MOTOR

Install:

- the two screws
- a new tie strap
- the connector
- the seat. See **LIFTING THE FRONT SEATS IN AND OUT** .

REMOVING THE REAR HEIGHT ADJUSTMENT MOTOR

Remove the seat from the car. See **LIFTING THE FRONT SEATS IN AND OUT** .

Disconnect the connector at the control module or the connector at the motor.

NOTE: Carefully release the catches on the connector.

Remove the two screws.

INSTALLING THE MOTOR FOR REAR HEIGHT ADJUSTMENT

Install:

- the two screws
- the connector
- the seat. See **LIFTING THE FRONT SEATS IN AND OUT** .

ELECTRICAL

Body and interior

ELECTRICAL

CONNECTING THE BREAKOUT BOX

Special tools:

see **9511510**

see **9511428**

CAUTION: Avoid touching control module connector pins and corresponding cable harness connectors. There is a risk of electrostatic discharge, which could damage the control module. Relieve any charge on yourself and the tools to be used by holding the metal part of the tool and touching part of the body just before starting work.

General information

Visually check the connectors to ensure that the male and female terminals are not damaged and that the cables are properly connected in the terminals.

The breakout box is designed to make it easier to take readings from cables and components when the control module is disconnected. The use of a breakout box reduces the risk of accidental short-circuited cables and damage to the connector pins.

Connecting the breakout box

- Ignition off.
- Disconnect the control module connector.

Connect adapter see **9511510** to the control module connector. Connect one or two breakout boxes see **9511428** to the adapter depending on the reading to be taken.

Disconnect the breakout box in reverse order.

Other information:

- To access / replace the SRS control module and connectors, see **SUPPLEMENTAL RESTRAINT SYSTEM MODULE (SRS), REPLACING** .
- For the location of the components, see **LOCATION OF COMPONENTS** .
- For other values, see **SIGNAL SPECIFICATION** .

CONNECTOR

Special tools:

see **9512638**

MOTORS CONNECTOR

NOTE: Always use a new clip when installing.

Remove the clip from connector.

Fig. 1: Clip From Connector
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bottom of the connector.

  Pry out the wings.

  Press forward.

  Remove bottom.

Fig. 2: Identifying Connector Pins
Courtesy of VOLVO CARS CORPORATION

- pins in switch.

Press in catch.

Move the pin backwards. Use special tool see **9512638** .

INSTALLATION

Install:

In reverse order.

SEATS

Body and interior

SEATS

LIFTING THE FRONT SEATS IN AND OUT

-2004

- See: **LIFTING THE FRONT SEATS IN AND OUT**.

2005-

- See: **FRONT SEAT, REPLACING** .

LIFTING THE FRONT SEATS IN AND OUT

LIFTING THE FRONT SEATS IN AND OUT

Remove the four panels located above the seat screws:

Pull the front panels straight up. Pull the rear panels diagonally upwards and backwards.

Unscrew the four M10 screws.

Carry out operation, see **SIDE PANEL**,

see **SEAT BELT BUCKLE END MOUNTING**, and **SRS CONNECTOR**.

Disconnect the remaining connectors.

Remove the seat.

NOTE: To prevent electric static discharge problems:

When removing a seat from a car with side airbags, the seat must be grounded. This is due to the danger of static electricity.

When the seat is removed from its screwed joints and **before** it is lifted out of the car:

Strip a long cable at both ends.

Secure one end to the rear mounting on the seat (the metal colored mounting).

Secure the other end in the car or to the car lift.

Install:

In reverse order.

The seat must be tightened to the floor. Tighten to **48 Nm** .

SEAT BELT BUCKLE END MOUNTING

Fig. 1: Identifying Seat Belt Buckle End Mounting
Courtesy of VOLVO CARS CORPORATION

Remove end mounting:

Insert a screwdriver on the inside of the mounting.

Press the catches inwards.

Pull upwards.

Install:

In reverse order.

SIDE PANEL

REPLACING FRONT SEAT SIDE PANEL

Fig. 2: Identifying Screwdriver Inserted At Rear Of Handle
Courtesy of VOLVO CARS CORPORATION

Remove the height adjustment lever handle:

Insert a screwdriver at the rear of the handle.

Release the catches.

Pull upwards.

Install:

In reverse order.

Fig. 3: Identifying Front Edge Of Panel Pulled Upwards And Backwards
Courtesy of VOLVO CARS CORPORATION

Pull the front edge of the panel upwards.

Pull panel backwards.

Install:

In reverse order.

SRS CONNECTOR

REMOVING THE SIPS BAG CONTROL MODULE CONNECTOR

NOTE: Take care when separating the connectors.

If the connector breaks the whole cable harness must be replaced.

NOTE: Always replace the clip if it has been removed.

Fig. 4: Identifying SIPS Bag Control Module Connector
Courtesy of VOLVO CARS CORPORATION

Press on the side so that the bag goes over the edge (1).

Separate the connector.

Bend the clip at the front edge (2).

Move the clip backwards.

Remove clip.

Install:

In reverse order.

LOCK SIDE PIECE

REPLACING THE LOCK SIDE PIECE

Fig. 5: Identifying Lock Side Piece And Screw
Courtesy of VOLVO CARS CORPORATION

Remove:

- the cover
- the screw
- Pull the guide to one side. Lift part of the panel over the guide. Slide the guide back to disconnect the other side.

REPLACING THE LOCK BUTTON AND INDICATOR

Fig. 6: Identifying Inner Cover And Indicator
Courtesy of VOLVO CARS CORPORATION

- Remove the lock side piece according to **REPLACING THE LOCK SIDE PIECE**
- Remove the spring and sleeve
- Press the button inwards at the bottom edge
- Lift the inner cover to remove the indicator.

INSTALLING THE LOCK SIDE PIECE

Install:

In reverse order.

For further information, see Removing backrest catches in, see **BACKREST CATCHES** .

NOTE: Check the function.

MOTOR FOR FRONT HEIGHT ADJUSTMENT

REPLACING THE MOTOR FOR HEIGHT ADJUSTMENT

Remove:

- the seat from the car and the bracket. See **BRACKET (CROSS STAY)**
- the connectors. See **CONNECTOR** .

Fig. 7: Identifying Motor For Front-Rear Adjustment
Courtesy of VOLVO CARS CORPORATION

- the two screws.

Install:

In reverse order.

MOTOR FOR REAR HEIGHT ADJUSTMENT

REPLACING THE REAR HEIGHT ADJUSTMENT MOTOR

Remove

- the seat from the car and the bracket. See **LIFTING THE FRONT SEATS IN AND OUT**
- the connectors. See **CONNECTOR** .

Fig. 8: Locating Seat Belt Buckle Screws
Courtesy of VOLVO CARS CORPORATION

- the two screws (seat belt buckle).

Fig. 9: Identifying Motor For Front-Rear Adjustment
Courtesy of VOLVO CARS CORPORATION

- the two screws.

Install:

In reverse order.

Tighten the screws for the seat belt buckle. Tighten to **48 Nm** .

SEAT SIDE PIECE

REMOVING THE SIDE PIECE

Fig. 10: Locating Side Piece
Courtesy of VOLVO CARS CORPORATION

- Remove the cover and the two screws.
- Remove the central head restraint according to **CENTER HEAD RESTRAINT** .
- Fold down the outer head restraint.
- Release the strap guide.
- Slide the side piece backwards whilst sliding the legs of the head restraint through the slit in the side piece.

NOTE: Check that the release strap for the head restraint does not catch.

INSTALLING THE SIDE PIECE

Install:

- Assemble the side pieces.

WINDSHIELD

Body and interior

WINDSHIELD

BONDED WINDSHIELD, INSTALLATION

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

INSTALLATION

INSTALLING BONDED WINDSHIELD

WARNING: **All fixed windows are PUR bonded.**

PUR adhesive can cause asthma like symptoms. Isocyanate vapor from uncured primer or adhesive can cause allergies in the respiratory tract.

Once you have acquired an allergy the quantities required to trigger a reaction are very small

The risk remains until the material is cured.

Cured PUR adhesive can degrade if subjected to high temperatures and isocyanate compounds can be released when grinding or welding.

Ensure that ventilation is good. Use a fresh air mask

Never touch the adhesive surface with your fingers

Use protective gloves

NOTE: **Securely installed windows are part of the collision safety concept.**

Always use original PUR adhesive kits

These are selected and tested by VOLVO. They are the only ones for which VOLVO Car Corporation takes responsibility.

NOTE: **When bonding windshields, only Volvo's aftermarket adhesive is approved. This adhesive is continually tested to satisfy Volvo's demands on the vehicle in the aftermarket environment.**

Vehicles with a driver's airbag (SRS) and/or passenger airbag (SRS) must be bonded using 2-component adhesive.

If the windshield has been bonded with an adhesive that has not been approved by Volvo, this adhesive should be removed. This is because there are adhesives to which no PUR adhesive will bond.

NOTE: **See: BONDED WINDOW, GENERAL SAFETY INFORMATION .**

Place the windshield on a stand.

Apply the suction pads/winches.

NOTE: **Always keep a side window open when bonding the windshield. Otherwise it can move out of position when closing a side door.**

Fig. 1: Cleaning Remaining Adhesive
Courtesy of VOLVO CARS CORPORATION

Ensure that the remaining adhesive is even and that it is properly secured. Carefully check the corners where the adhesive meets the bodywork.

Do not touch the adhesive with your hands. Grease can cause adhesion problems.

Clean the remaining adhesive on the body flange using Cleaner-H.

CAUTION: **Only Cleaner-H should be used. Other cleaning agents can affect adhesion.**

Wash the entire windshield using glass cleaner.

Fig. 2: Identifying Shaken Up Primer
Courtesy of VOLVO CARS CORPORATION

Apply glass primer where the adhesive will be applied. Apply generously (although not so that it runs).

Allow the glass primer to dry for 10 minutes.

If any part of the windshield frame has been painted, primer must be applied to the body flange.

If the adhesive has been exposed for more than 8 hours, it must be treated using PUR rim activator.

Fig. 3: Identifying Primer Cap Removal
Courtesy of VOLVO CARS CORPORATION

Fig. 4: Applying Primer
Courtesy of VOLVO CARS CORPORATION

Cut the pipe so that the adhesive is 12 mm high with a 6 mm base.

When bonding using 2-component adhesive, the windshield must be positioned within 10 minutes.

Apply adhesive to either the glass or to the body flange.

Hold the gun at right angles to the surface.

Ensure that the adhesive bead is continuous. A break in the adhesive bead can result in the adhesive join surface not being watertight.

Position the glass.

Check that the windshield is in the same position at both A-posts.

Push against the lower edge of the windshield by hand so that it bonds to the lower spacer cushions.

Place a few strips of masking tape on the glass and part way over the roof to prevent the glass from sliding down.

REAR SIDE WINDOW

Body and interior

REAR SIDE WINDOW

SIDE WINDOW, REAR, REPLACING

SIDE WINDOWS, REAR, REMOVING

Detach the C-post panel. See **PANEL C-POST, REPLACING** .

Detach the D-post panel. See **PANEL D-POST, REPLACING** .

Cut out the window.

NOTE: Use soap solution. This will facilitate cutting.

Fig. 1: Disconnecting Connectors For Radio Antenna, RTI, TV, And Alarm
Courtesy of VOLVO CARS CORPORATION

Disconnect the connectors for:

- the radio antenna
- RTI (road traffic information)
- TV
- alarm.

Fig. 2: Locating PUR Bead, Windshield Knife, And Locating Pin
Courtesy of VOLVO CARS CORPORATION

(1) = PUR bead.

(2) = Windshield knife

(3) = Locating pin.

Cut along the marked edge.

Use a long blade against the C-post.

Otherwise use a short blade.

Be careful around the locating pin. Do not damage the paint work.

If the window is to be reused: Remove the PUR bead with a chisel.

When working with PUR on the body flange, see **PUR ON BODY FLANGE** .

SIDE WINDOWS, REAR, INSTALLING

NOTE: Install the trim strip before positioning the window when replacing the rear side window.

When working with PUR on the body flange, see **PUR ON BODY FLANGE** .

Clean the area on the window to which PUR adhesive is to be applied with cleaner-H (black cap).

Apply glass activator (yellow cap) to the area on the glass to which PUR adhesive will be applied.

Apply glass primer (green cap) to the area on the glass to which PUR adhesive will be applied.

Apply generously (although not so much that it runs).

Let the primer dry until the surface is matte.

Apply the PUR/RIM activator (blue cap) on the remaining PUR bead on the body flange.

Fig. 3: Locating PUR Bead, Windshield Knife, And Locating Pin
Courtesy of VOLVO CARS CORPORATION

Load the gun with both cartridges and the mixing pipe.

Apply adhesive to either the glass or to the body flange.

Press the window into place by hand.

Secure with tape.

Load the gun with both cartridges and the mixing pipe.

Apply adhesive to either the glass or to the body flange.

Press the window into place by hand.

Secure with tape.

REAR WINDSHIELD

Body and interior

REAR WINDSHIELD

REMOVING THE REAR WINDSHIELD

Special tools:

see **9512786**

Special tools:

see **9512787**

Special tools:

see **9512788**

REMOVING THE REAR WINDSHIELD

NOTE: **Tape around the window to protect the paint.**

Fig. 1: Identifying PUR Bead, Window Knife, Guide Hole, And Spacers
Courtesy of VOLVO CARS CORPORATION

1 = PUR bead.

2 = Windshield removal knife (see, see **WINDOW KNIFE**).

3 = Guide hole.

4 = Spacers.

Use short bladed knife see **9512787**

Start at the upper corner and cut along the sides and top edge.

NOTE: Be careful at the spacers (4). Do not damage the paint work.

Use long bladed knife see **9512788** .

Cut at the bottom edge.

Carefully remove the window.

Remove the connectors for the heated rear windshield.

Lift out the windshield and place it on the stand.

When working with PUR on the body flange, see **PUR ON BODY FLANGE** .

WINDOW KNIFE

Special tools:

see **9512786**

see **9512787**

see **9512788**

WINDOW KNIFE AND BLADES

It can be difficult or impossible to remove some windows with string.

For this reason a window knife with long and short blades has been produced.

Fig. 2: Identifying Window Knife And Blades
Courtesy of VOLVO CARS CORPORATION

Window knife and blades.

Fig. 3: Cutting Adhesive Using Window Knife
Courtesy of VOLVO CARS CORPORATION

Push tip of knife through adhesive bead.

Hold the shaft of the knife.

Pull the draw-handle.

WINDSHIELD

Body and interior

WINDSHIELD

WINDSCREEN REMOVAL

Special tools:

see **1159784**

see **1159783**

see **1159785**

Special tools:

see **9512335**

WINDSCREEN REMOVAL

Open bonnet.

Remove the windscreen wipers.

Loosen the plenum covering and pull it forward.

- For -2005, see **COWL, REPLACING** .
- For 2006- see **COWL, REPLACING** .

Fig. 1: Identifying Removal Of Strips Along A Pillars & Roof
Courtesy of VOLVO CARS CORPORATION

Remove the strips along the A pillars and the roof as described in, see **WEATHERSTRIPS AND TRIM STRIPS**.

Remove:

- the roof sealing strip.
- the guide strip on the lower edge.
- A pillar panels as described in, see **PANEL A-POST, REPLACING**

NOTE: Be careful not to damage the paint. Tape the A pillars with masking tape.

Fig. 2: Identifying Wire Pulled With Long Nose Pliers
Courtesy of VOLVO CARS CORPORATION

Pierce the wire through the PUR glue from the inside and out.

Pull through the wire from the outside using long nose pliers.

Fix the wire in the draw-handle on the outside and in the counterhold on the inside of the car.

Fig. 3: Pulling On Draw-Handle From Outside
Courtesy of VOLVO CARS CORPORATION

Two people:

Press the counterhold as firmly as possible against the edge. Pull steadily on the draw-handle from the outside with uniform force.

Pause now and again and move the counterhold gradually forward.

"Saw" past the corners. Be extra careful near the roof edge strip.

Be careful not to damage the equipment and paint.

Fig. 4: Identifying Suction Cups On Window
Courtesy of VOLVO CARS CORPORATION

Install the suction cups see **9512335** on the window and lift it out.

For handling PUR on the body flange, see **PUR ON BODY FLANGE** .

WEATHERSTRIPS AND TRIM STRIPS

Fig. 5: Identifying Weatherstrips & Trim Strips (1 Of 4)
Courtesy of VOLVO CARS CORPORATION

Fig. 6: Identifying Weatherstrips & Trim Strips (2 Of 4)
Courtesy of VOLVO CARS CORPORATION

Fig. 7: Identifying Weatherstrips & Trim Strips (3 Of 4)

Fig. 8: Identifying Weatherstrips & Trim Strips (4 Of 4)
Courtesy of VOLVO CARS CORPORATION

BODY & FRAME

Body and interior

BODY & FRAME

PUR ON BODY FLANGE

PUR ON BODY FLANGE

- After the window has been removed, the surplus PUR glue on the body flange must be removed using H cleaner.

CAUTION: Do not use any cleaner other than H cleaner: Other cleaning agents affect the adhesion.

- If the surface is uneven, a chisel with width **approximately 13 mm / 0.5 in** may be used to even out the remaining PUR bead.
- **Do not touch the PUR bead with your hands. Grease on PUR can cause adhesion problems.**

Plate work

- If some of the window frames have been painted, the body flange must be coated with paint primer (Component number 1161386).
- If 2-component glue is used, the window must be in place within **10 minutes** .
- Ensure that the bead is continuous without break, otherwise the joint will not be tightly sealed which will result in water leakage.
- Always open a side window when replacing a window, otherwise the window may fall out of position when the door is closed.
- Read.

REMOVING RIVET

Special tools	
	T9814075 SPRAY GUN **Tool number:** T9814075 **Tool description:** SPRAY GUN **Tool boards:**

Materials:	
Designation	**Part number**
Thin rustproofing agent	1161682

NOTE: If the pop rivet spins, drill at a 45° angle against the pop rivet.

Pay attention to heat generation when drilling in pop rivet mounted in plastic part.

Remove drill burrs and any remains of the rivet.

If possible, put tape on the back to catch pop rivet.

Fig. 1: Applying Thin Rustproofing Agent
Courtesy of VOLVO CARS CORPORATION

To avoid rattling if it is not possible to remove remains of rivet.

Use: Thin rustproofing agent, 1161682

see **9814075**

CAUTION: Make sure that rustproofing agent does not run out, discoloring the upholstery or other.

EXTERIOR/INTERIOR TRIM

Body and interior

EXTERIOR/INTERIOR TRIM

APRON MOLDING

REPLACING APRON MOLDING

The sun roof in tilted position.

Fig. 1: Identifying Apron Molding Pulled Into Car
Courtesy of VOLVO CARS CORPORATION

Pull the apron molding into the car.

Detach at front edge.

Unhook at the lower edge.

Remove the apron molding.

Install:

In reverse order.

Body and interior

EXTERIOR/INTERIOR TRIM

PANEL, TAILGATE, REPLACING

REMOVING THE TAILGATE PANEL

Fig. 1: Identifying Tailgate Panel
Courtesy of VOLVO CARS CORPORATION

- Remove the cargo compartment side panel. See **LOWER TAILGATE PANEL**
- Detach the two side clips by pulling the sides inwards
- Detach the four covered clips by pulling straight downwards (with the cover folded up completely).

INSTALLING THE TAILGATE PANEL

Install:

In reverse order.

ACCESSORIES AND BODY, CAB

Body Frame - Cleaning, Inspection and Adjustment

WINDOW MOLDING, MASKING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

MASKING OF WINDOW SEAL STRIPS WHEN PAINTING ROOF

Fig. 1: Cutting Masking Tape
Courtesy of VOLVO CARS CORPORATION

The roof has an integrated seal strip against the roof.

To avoid removing the windows when painting, use of 3M's masking tape with the following part number is recommend:

7 mm	3M part number	06347
10 mm	3M part number	06349
15 mm	3M part number	06348

The masking consists of two plastic foil pieces that are to be inserted between the window seal strip and the roof side, and are then to be taped against the rear window.

Fig. 2: Peeling Backing Off
Courtesy of VOLVO CARS CORPORATION

Fig. 3: Folding Tape Over
Courtesy of VOLVO CARS CORPORATION

ACCESSORIES AND EQUIPMENT

Body Frame - General Information

BODY MATERIALS

BODY SEAL

NOTE: **As the graphics in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the graphics is always correct.**

CLASSIFICATION GROUPS

CLASS A

Fig. 1: Identifying Seal Class A
Courtesy of VOLVO CARS CORPORATION

Visible seal with high requirements for the finish.

The material must have been applied liberally but evenly. There must be no areas where excess sealant has gathered.

Use a rubber putty knife to smooth the surface.

See panel section A for the appearance of the bead.

CLASS B

Fig. 2: Identifying Seal Class B
Courtesy of VOLVO CARS CORPORATION

Visible seal with lower requirements for the finish.

The material should be liberally but evenly applied.

Lines and minor pitting is acceptable.

The sealant must not have been applied too thickly.

The dimension of the bead must be as in panel section B.

B1 = min 0.5 mm; max 2.0 mm

B2 = min 4.0 mm; max 10.0 mm

B3 = min 2.0 mm

B4 = min 2.0 mm; max 4.0 mm

CLASS D

Fig. 3: Identifying Seal Class D
Courtesy of VOLVO CARS CORPORATION

Seal with no requirements for the finish.

The sealant must be liberally applied.

Minimum material thickness = 0.5 mm.

Lines, lumps and pools of up to 5 mm are acceptable.

The dimension of the bead must be as in panel section D.

D1 = min 0.5 mm; max 5.0 mm

D2 = min 7.0 mm; max 50 mm

SEALING PRODUCTS

In order to meet Volvo's requirements, only approved sealing products may be used.

The products that have been tested for body sealing are listed below.

SPRAY SEALANT

P/N 116 1443 is a sprayable bodywork sealant that restores the car to as-new condition after work on the body.

The sealant can be applied as a bead (class A and B) or sprayed on in a thin layer (class D) using a spray gun (P/N 116 1444).

When applying as a bead, this type of sealant is very difficult to work on afterwards because of its runny consistency.

The sealant can be painted and hardens approximately 3 mm every 24 hours.

WEATHERSTRIPS

Seal the joints between the panel sections when replacing panel sections such as the spare wheel well, tail panel etc. Class A and B (P/N 116 1377) sealing is suitable.

FOAM RUBBER REPLACEMENT

Install the foam rubber replacement in the cavity to counter sound spreading through the body.

The foam rubber replacement is a wax treated foam ball (P/N 681 7640) that can be compressed and inserted between the panel sections. More than one foam ball can be used if one is not sufficient.

GALVANIZED BODY COMPONENTS, ALIGNING AND WELDING

Fig. 4: Aligning Using Sanding Block
Courtesy of VOLVO CARS CORPORATION

Aligning

- Galvanized body components can be aligned in the usual way, but avoid using a body file. Use a sanding block or grinding disc with 80-grade paper instead
- Apply soldering paste in the usual way
- The soldering paste removes the galvanizing and adheres to the bare metal
- Always finish with 120-grain paper to prepare for spray painting.

NOTE: **Protect the galvanized layer as much as possible, as it is part of the rust protection.**

Fig. 5: Identifying MAG Spot Welder
Courtesy of VOLVO CARS CORPORATION

Welding

- Galvanized body components can be welded using **MAG** and resistance spot welding
- **Protect the galvanized layer** when preparing to weld.

NOTE: Use welding primer between the joins. Use point extraction .

- When **resistance spot welding** , the electrodes must be pressed together for a longer period than for untreated metal
- Voltage must also be increased slightly.

NOTE: Check welds carefully. Surfaces must be clean when resistance spot welding. Clean the surfaces using Scotch-Brite or similar. This protects the zinc coating and phosphate coating on the metal.

151 904

Fig. 6: Applying Special Filler
Courtesy of VOLVO CARS CORPORATION

Base filling

- After aligning galvanized panels use plastic filler in the same way as on ordinary body panels
- Not all types of filler can be used directly on galvanized metal
- Volvo has developed a **special filler** . This filler can be used on both aluminum and conventional body panels. **No primer is necessary** .

When applying plastic filler

- Apply filler
- Do not damage the galvanized layer
- Filler thickness **max 1 mm**
- Sand off the old paint
- Old paint need not be sanded off if damage is superficial. Matt using 120-grain paper.
- Limit the area being sanded. Remember that it will need to be spray painted later.
- Always finish with 120-grain paper to prepare for spray painting.

SHEET METAL, MATERIAL INFORMATION

GALVANIZED COMPONENTS

Fig. 7: Identifying Galvanized Components (1 Of 2)
Courtesy of VOLVO CARS CORPORATION

Fig. 8: Identifying Galvanized Components (2 Of 2)
Courtesy of VOLVO CARS CORPORATION

HSS STEEL

The bodywork is made up of a number of different steels to provide optimal protection in the event of a collision, rigidity, fuel economy etc.

The types of steel in this section are High Strength Steel (HSS). This has a higher tensile strength and yield point than ordinary steel sheet.

The yield point increases when it is heat treated. HSS-steel can be more difficult to align than ordinary steel plate.

When using an alignment bench, HSS components can cause problems if the counterhold is not fully tightened. Note how the bodywork reacts to tension and ensure that only the deformed area moves.

Always follow the welding procedures shown in VIDA (Volvo scan tool).

NOTE: HSS-steel must not be heat aligned.

BORON STEEL

Fig. 9: Identifying BORON Steel (1 Of 4)
Courtesy of VOLVO CARS CORPORATION

BORON steel is in the same group as HSS steel.

The components marked in black are manufactured in Boron steel, The grey/dark grey sections in the graphics are High Strength Steel (HSS) with a yield point above 340 MPa and must therefore be treated with extra care during repair.

Boron steel is high tensile with a high breaking point.

When replacing Boron steel components, the welds cannot be drilled. Grind or plasma cut instead.

Boron steel has good tolerance for welding.

It is not possible to galvanise Boron steel during manufacture. These components must be rust-proofed extra thoroughly.

NOTE: **Boron steel must not be bent or heated.**

NOTE: **Boron steel may only be joined where indicated in the method. Mark carefully using a template. Use a cutting disc or plasma cutter.**

Fig. 10: Identifying BORON Steel (2 Of 4)
Courtesy of VOLVO CARS CORPORATION

Fig. 11: Identifying BORON Steel (3 Of 4)
Courtesy of VOLVO CARS CORPORATION

Fig. 12: Identifying BORON Steel (4 Of 4)
Courtesy of VOLVO CARS CORPORATION

EXTENDED INFORMATION

The steel can be divided into further subgroups based on the yield point, the force required to deform the steel. These groups are:

HS (HIGH STRENGTH STEEL)

Steel with a yield point between 220-450 MPa (marked light grey in the graphic).

There are three main types of steel within this group:

Phosphorous-alloy steel:

This steel has a higher strength as a result of the use of phosphorous alloy.

HSLA steel (High Strength Low Alloy):

This is a low alloy steel, where alloys such as Vanadium, Niobium or Titanium are used to increase the yield strength.

DP steel (Dual Phase):

This steel is strengthened by heat treatment during manufacture. A two phase structure of iron and carbon is formed. DP steel will lose its strength if it is exposed to temperatures in excess of 300°C.

EHS (EXTRA HIGH STRENGTH STEEL)

Has a yield point between 450-800 MPa. EHS is light grey in the graphic.

Both HSLA and DP steel are within this group, although the strength has been further increased through the addition of greater alloy substances.

UHS (ULTRA HIGH STRENGTH STEEL)

Has a yield point between 800-1400 MPa. UHS is dark grey in the graphic.

There are two main types of steel within this group:

DP steel:

The strength is even higher due to an advanced manufacturing process and the greater quantities of alloys.

BORON steel:

The additional of boron gives this steel greater strength. BORON steel also contains relatively high quantities of carbon. The profiles of the sheets are formed between a press and pad while the metal is red hot. The material also hardens here. These sections must not be straightened because of their extremely high strength.

WELDING, GENERAL

NOTE: The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.

Volvo bodies are manufactured to the highest quality. All bodywork repairs must therefore take place following the same principles. Use light tools. Take care of the surface coating, electro dip (ED) and phosphating.

Always use welding primer between welded panel flanges.

PRIOR TO WELDING

CAUTION: Always remove the battery cables before welding in accordance with, see BATTERY, DISCONNECTING .

CAUTION: Locate the welding ground connection as close as possible to the welding point.

CAUTION: If the welding must be carried out in the immediate vicinity of an electronic unit then this must be removed.

ASSEMBLY

Spot welding is mainly used when the bodies are manufactured, and use of this method should always be aimed for with a repair.

CAUTION: Gas welding must not be used on Volvo bodywork.

WARNING: Use ventilation/extraction equipment.

Unless otherwise specified in the method, the distance between the welds must be the same as the original design.

Fig. 13: Identifying Welding Symbols
Courtesy of VOLVO CARS CORPORATION

There are a number of other assembly methods that are illustrated with the following symbols:

1. Spot weld/spot weld with the location of the weld and lens diameter specified with colour (may be replaced with 2)
2. Plug weld (may be replaced with 1)
3. Seam weld/Seam weld with weld length specified in mm
4. Step weld/Step weld with weld length followed by length between welds specified in mm. Always start and finish with the weld.
5. Tack weld
6. Glue.

RESISTANCE SPOT WELDING

Resistance spot welding must primarily be used if the capacity of the welding equipment is matched to panel thickness. When carrying out resistance spot welding, grind down to bare metal.

Clean the surfaces with Scotch-Brite or similar to minimise zinc and phosphating damage. Apply welding primer between the panels.

NOTE: Always test weld in accordance with the method below. Always set the weld according to panel quality

MAG WELDING

Punch replacement part for plug welding.

Select size of hole for plug welding according to the following panel thicknesses:

8 mm for thicknesses less than 2.5 mm

10 mm or more for thicknesses above 2.5 mm.

Fig. 14: Identifying Welding Lens Diameter
Courtesy of VOLVO CARS CORPORATION

Test weld several test pieces. Break the panels apart and measure the size of the welding lens diameter (A), see illustration.

Fig. 15: Identifying Proper Spot Welds On Both Panels
Courtesy of VOLVO CARS CORPORATION

NOTE: Use welding primer on all internal flanges.

Add filling primer if there is grinding damage.

CAUTION: Make sure that the spot welds take properly on both panels.

Fig. 16: Grinding Properly And Improperly
Courtesy of VOLVO CARS CORPORATION

Grind down the plug weld.

CAUTION: Only grind welds, not the adjacent panel.

ACCESSORIES AND BODY, CAB

Body Frame - Removal, Replacement And Installation

BODY SIDE (2003-2004)

A-POST, REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

A-POST, REPLACING

REMOVING THE A-POST

Fig. 1: Removing The A-Post
Courtesy of VOLVO CARS CORPORATION

Remove components. See **SIDE SECTION, EXPOSING** .

Determine the extent of the damage. See **WINDSHIELD FRAME, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. See the recommended cutting points in the illustration.

Remove:

- the door hinges. See **HINGES SIDE DOOR, REPLACING** . The replacement part can also be cut so that the A-post can be slid over the hinges
- the cover for the upper side member. See **SIDE MEMBER, UPPER, REPLACING**.

Grind and drill out the spot welds and bead welds.

Pry off the rear section.

Grind clean.

Apply welding primer.

INSTALLING THE A-POST

Fig. 2: Installing The A-Post
Courtesy of VOLVO CARS CORPORATION

Install foam rubber replacement at (1).

Align the replacement part. See **WINDSHIELD FRAME, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Secure the replacement part.

Weld into place.

Install:

- the door hinges. See **HINGES SIDE DOOR, REPLACING**
- the cover for the upper side member. See **SIDE MEMBER, UPPER, REPLACING**.

Seal according to **BODY SEAL** .

REPLACING THE A-POST REINFORCEMENT

REMOVING THE A-POST REINFORCEMENT

Fig. 3: Removing The A-Post Reinforcement
Courtesy of VOLVO CARS CORPORATION

Remove the dashboard. See **DASHBOARD, REPLACING** .

Grind and drill off the A-post reinforcement.

Fig. 4: Identifying A-Post Assembly Holes
Courtesy of VOLVO CARS CORPORATION

Grind off the MAG welds on the inside (2) which hold the reinforcement section inside the A-post reinforcement.

Remove the screw holding the reinforcement (3).

Grind clean.

Apply welding primer.

INSTALLING THE A-POST REINFORCEMENT

Fig. 5: Installing The A-Post Reinforcement
Courtesy of VOLVO CARS CORPORATION

Install foam rubber replacement at (1).

Secure the replacement part using the bolt on the inside of the A-post.

Weld into place.

Install:

- the outer A-post
- the hinges. See **HINGES SIDE DOOR, REPLACING** .

Fig. 6: Installing The A-Post Reinforcement
Courtesy of VOLVO CARS CORPORATION

Fig. 7: Identifying A-Post Assembly Holes
Courtesy of VOLVO CARS CORPORATION

BODY SIDE INNER, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE INNER BODY SIDE

Fig. 8: Removing The Inner Body Side
Courtesy of VOLVO CARS CORPORATION

Remove the components. See **REAR SECTION, EXPOSING** and **SIDE SECTION, EXPOSING** .

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. See the recommended cutting points in the illustration.

If necessary, remove:

- the rear fender. See **REAR FENDER, REPLACING**
- the C-post. See **C-POST, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**.

Grind off the spot welds.

Pry off the inner body side.

Grind clean.

Apply welding primer.

INSTALLING THE INNER BODY SIDE

Fig. 9: Installing The Inner Body Side
Courtesy of VOLVO CARS CORPORATION

Secure the replacement part.

Weld into place.

Install:

- the rear fender. See **REAR FENDER, REPLACING**
- the C-post. See **C-POST, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**.

Seal the body.

B-POST, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

B-POST, REPLACING

REMOVING THE B-POST

Fig. 10: Removing The B-Post
Courtesy of VOLVO CARS CORPORATION

Remove components. See **SIDE SECTION, EXPOSING** .

Pull out the damaged section to make it easier to re-align internal components.

Determine the extent of the damage. See **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. The recommended cutting points are marked in the illustration.

Remove the door hinges (see, see **HINGES SIDE DOOR, REPLACING**) or cut the replacement part so that the B-post can be slid over the hinge.

Grind and drill out the spot welds and bead welds.

Pry off the B-post.

INSTALLING THE B POST

Fig. 11: Installing The B Post
Courtesy of VOLVO CARS CORPORATION

Grind clean.

Apply welding primer.

Install the replacement part so that it is slightly overlapping the old panel.

Align the replacement part.

Saw through the two panels.

Do not damage the internal reinforcements when sawing.

Secure the edges of the joints by tack welding.

Complete the welding.

Seal the seams and joins. See **BODY SEAL**

B-POST INNER AND REINFORCEMENT B-POST, REPLACING

REMOVING THE INNER B-POST AND B-POST REINFORCEMENT

Fig. 12: Removing The Inner B-Post And B-Post Reinforcement
Courtesy of VOLVO CARS CORPORATION

NOTE: **The B-post reinforcement is made of BORON steel. This material cannot be sawn, drilled through or realigned. For more information, see SHEET METAL, MATERIAL INFORMATION .**

The inner B-post and the reinforcement must be replaced together; they are extremely difficult to separate.

Grind off the spot welds.

Cut the inner B-post at the top edge. See the illustration.

Grind off the bead welds on the inside of the B-post.

Pry off the component.

INSTALLING THE INNER B-POST AND B-POST REINFORCEMENT

Fig. 13: Installing The Inner B-Post And B-Post Reinforcement (1 of 2)
Courtesy of VOLVO CARS CORPORATION

Grind clean.

Apply welding primer.

Align the replacement part. See **BODY SIDE, ALIGNMENT CHART** .

Secure and weld the replacement part into place.

Fig. 14: Installing The Inner B-Post And B-Post Reinforcement (2 of 2)
Courtesy of VOLVO CARS CORPORATION

NOTE: **Start welding from the center outwards. This is to reduce stress and make spot welding easier in the tough material.**

C-POST, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE C-POST

Fig. 15: Removing The C-Post
Courtesy of VOLVO CARS CORPORATION

Remove components. See **SIDE SECTION, EXPOSING** .

HINT: Before removing the rear fender, mark on the flange where the cutting edges used for the body side alignment chart are.

Remove the rear fender. See **REAR FENDER, REPLACING** .

Grind and drill off the C-post reinforcement. If joining the reinforcement, position the joint as illustrated (1).

Pry off the component.

Grind clean.

Apply welding primer.

INSTALLING THE C-POST

Fig. 16: Installing The C-Post
Courtesy of VOLVO CARS CORPORATION

Install foam rubber replacement between the C-post reinforcement and the inner body side (2). See **BODY SEAL** .

Secure the replacement part.

Weld into place.

DOOR SILL SILL REINFORCEMENT, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

DOOR SILL, REPLACING

REMOVING THE DOOR SILL

Fig. 17: Removing The Door Sill
Courtesy of VOLVO CARS CORPORATION

Remove components. See **SIDE SECTION, EXPOSING** .

Pull out the damaged section to make it easier to re-align internal components.

Determine the extent of the damage. See **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. The recommended cutting points are marked in the illustration.

NOTE: Do not replace too small a section of the door sill because the damage may have spread.

Grind and drill out the spot welds and bead welds.

Pry off the component.

INSTALLING THE DOOR SILL

Fig. 18: Installing The Door Sill
Courtesy of VOLVO CARS CORPORATION

Grind clean.

Apply welding primer.

Saw through the two panels. Do not damage the reinforcements inside the door sill when sawing.

Secure the edges of the joints by tack welding.

Weld into place.

The brackets for the front fender must be installed when replacing the front section of the door sill. For the location, see **BODY SIDE, ALIGNMENT CHART** .

Seal the seams and joins. See **BODY SEAL** .

SILL REINFORCEMENT DOOR SILL, REPLACING

REMOVING THE SILL REINFORCEMENT FOR THE DOOR SILL

Fig. 19: Removing The Sill Reinforcement For The Door Sill
Courtesy of VOLVO CARS CORPORATION

The door sill reinforcement is inside both the B-post reinforcement and the A-post reinforcement. Remove the A-post. See **A-POST, REPLACING**. Remove the B-post. See **B-POST, REPLACING**.

NOTE: **The B-post reinforcement is made of BORON steel. This material cannot be sawn, drilled through or realigned. For more information, see SHEET METAL, MATERIAL INFORMATION .**

The sill reinforcement must not be joined.

Grind and drill out the spot welds and bead welds.

Pry off the component.

INSTALLING THE SILL REINFORCEMENT FOR THE DOOR SILL

Grind clean.

Apply welding primer.

Align the replacement part. See **BODY SIDE, ALIGNMENT CHART** .

Secure and weld the replacement part into place.

BODY SIDE (2005-2012)

A-POST, REPLACING

see **A-POST, REPLACING**

BODY SIDE INNER, REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE INNER BODY SIDE

Fig. 20: Removing The Inner Body Side
Courtesy of VOLVO CARS CORPORATION

Remove the components. See **REAR SECTION, EXPOSING** and **SIDE SECTION, EXPOSING** .

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. See the recommended cutting points in the illustration.

If necessary, remove:

- the rear fender. See **REAR FENDER, REPLACING**
- the C-post. See **C-POST, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**.

Grind off the spot welds.

Pry off the inner body side.

Grind clean.

Apply welding primer.

INSTALLING THE INNER BODY SIDE

Fig. 21: Installing The Inner Body Side
Courtesy of VOLVO CARS CORPORATION

Secure the replacement part.

Weld into place.

Install:

- the rear fender. See **REAR FENDER, REPLACING**
- the C-post. See **C-POST, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**.

Seal the body.

B-POST, REPLACING

see **B-POST, REPLACING**

C-POST, REPLACING

see **C-POST, REPLACING**

DOOR SILL SILL REINFORCEMENT, REPLACING

see **DOOR SILL SILL REINFORCEMENT, REPLACING**

FLOOR, FRAME SECTION, WHEEL ARCH, FIREWALL (2005-2012)

BATTERY COMPARTMENT, REMOVING

REMOVING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE BATTERY COMPARTMENT

Remove components. See **REAR SECTION, EXPOSING** .

If necessary, remove:

- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**

Determine the extent of the damage. See **BODY SEAL** and **BODY SIDE, ALIGNMENT CHART** .

Grind off the spot welds.

Pry off the battery compartment.

Grind clean.

Apply welding primer.

INSTALLING THE BATTERY COMPARTMENT

Fig. 22: Installing The Battery Compartment
Courtesy of VOLVO CARS CORPORATION

Secure the replacement part.

Weld into place.

Install:

- the inner rear section. See **REAR SECTION INNER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**.

Seal. See **BODY SEAL** .

NOTE: **For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .**

COLLISION MEMBER, REPLACING

NOTE: **The illustrations in this service information are used for different model years and / or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

IMPORTANT INFORMATION

The collision member is designed to collapse at the first force in the event of a collision.

In the event of a minor collision, only the collision member will be deformed. The engine frame will not be deformed.

REMOVING THE COLLISION MEMBER

Fig. 23: Removing The Collision Member
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bumper. See **CASING BUMPER FRONT, REPLACING**
- the 6 screws.

INSTALLING THE COLLISION MEMBER

NOTE: For tightening torques, see TIGHTENING TORQUE .

Suspend the member.

Install:

- the 6 M10 screws. Tighten
- the bumper according to **CASING BUMPER FRONT, REPLACING** .

SIDE MEMBER FRONT, REPLACING

Special tools:

see **9997072**

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS (OPERATIONS COMMON TO ALL METHODS)

Remove components. See **FRONT SECTION, EXPOSING** .

Pull out the damaged section using puller tool see **9997072** .

Determine the extent of the damage. See **SIDE MEMBERS / WHEEL ARCHES FRONT, ALIGNMENT CHART** and **FRONT SECTION, DIMENSIONS CHART** .

Included in this method are methods for:

- the outer section of the side member. See **SIDE MEMBER OUTER SECTION, REPLACING**
- the inner section of the side member. See **SIDE MEMBER INNER SECTION, REPLACING**.

SIDE MEMBER OUTER SECTION, REPLACING

REMOVING THE OUTER SECTION OF THE SIDE MEMBER

Fig. 24: Recommended Cutting Points
Courtesy of VOLVO CARS CORPORATION

Measure an appropriate cutting point on the side member. See the recommended cutting points, (1), (2) and (3), in the illustration.

CUTTING POINT 1

Fig. 25: Cutting Point Illustration
Courtesy of VOLVO CARS CORPORATION

Use this cutting point for minor damage to the side member.

The cutting point is 140 mm (M1) from the front end of the side member, between the inside of the towing eyelet and the fender bracket on the right-hand side.

Fig. 26: Dismantling Fender bracket
Courtesy of VOLVO CARS CORPORATION

Only drill off the front point (4) of the fender bracket and fold it up.

Fig. 27: Removing Member
Courtesy of VOLVO CARS CORPORATION

Cut the member.

Drill and grind off the spot welds.

Pry off the component.

CUTTING POINTS 2 AND 3

Fig. 28: Cutting Points Illustration
Courtesy of VOLVO CARS CORPORATION

Remove:

- the fender bracket
- the outer wheel arch reinforcement.

The wheel arch can be removed partially or fully. To replace, see **WHEEL HOUSING FRONT, REPLACING**.

Cut the member.

Grind and drill out the spot welds.

Pry off the component.

INSTALLING THE OUTER SECTION OF THE SIDE MEMBER

Fig. 29: Installing The Outer Section Of The Side Member
Courtesy of VOLVO CARS CORPORATION

Grind clean.

Apply welding primer.

Align and secure the replacement part.

NOTE: All cutting points are shown in the same illustration.

Cutting points 1, 2 and 3

Weld the fender bracket into place. For the location, see **SIDE MEMBERS / WHEEL ARCHES FRONT, ALIGNMENT CHART** .

Seal according to **BODY SEAL** .

Cutting points 2 and 3

Install the wheel arch. See **WHEEL HOUSING FRONT, REPLACING**.

Install wheel arch reinforcement.

Seal according to **BODY SEAL** .

SIDE MEMBER INNER SECTION, REPLACING

REMOVING THE INNER SECTION OF THE SIDE MEMBER

Measure an appropriate cutting point on the side member. See the recommended cutting points in the illustration.

CUTTING POINT 1

Fig. 30: Cutting Point Illustration
Courtesy of VOLVO CARS CORPORATION

Use this cutting point for minor damage to the side member.

The cutting point is 140 mm from the front end of the side member.

Fig. 31: Removing Front Section Of The Inner Wheel Arch Reinforcement
Courtesy of VOLVO CARS CORPORATION

Drill and saw off the front section of the inner wheel arch reinforcement. Saw in the center of the hole as illustrated (4).

Cut the side member.

Grind and drill out the spot welds.

Pry off the component.

CUTTING POINTS 2 AND 3

Fig. 32: Cutting Points 2 And 3
Courtesy of VOLVO CARS CORPORATION

Remove the inner wheel arch reinforcement.

Cut the member.

Grind and drill out the spot welds.

Pry off the component.

INSTALLING THE INNER SECTION OF THE SIDE MEMBER

Fig. 33: Installing The Inner Section Of The Side Member
Courtesy of VOLVO CARS CORPORATION

Cutting points 1, 2 and 3

Grind clean.

Apply welding primer.

Align and secure the replacement part.

NOTE: All cutting points are shown in the same illustration.

Weld the replacement part into place.

Weld the fender bracket into place. For the location, see **SIDE MEMBERS / WHEEL ARCHES FRONT, ALIGNMENT CHART** .

Cutting points 2 and 3

Install the wheel arch. See **WHEEL HOUSING FRONT, REPLACING**.

Install wheel arch reinforcement.

Install the radiator bracket. See **SIDE MEMBERS / WHEEL ARCHES FRONT, ALIGNMENT CHART** .

Fig. 34: Installing Side Member
Courtesy of VOLVO CARS CORPORATION

SIDE MEMBER REAR, REPLACE

Special tools:

see **9997001**

REPLACEMENT

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE REAR SIDE MEMBER

Fig. 35: Removing The Rear Side Member
Courtesy of VOLVO CARS CORPORATION

Remove components. See **REAR SECTION, EXPOSING** .

Correct the damage using an alignment bench. Use puller tool see **9997001** .

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. See the recommended cutting points in the illustration.

If necessary, remove:

- the rear fender. See **REAR FENDER, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**
- the battery compartment. See **BATTERY COMPARTMENT, REMOVING**.

Fig. 36: Removing Side Member
Courtesy of VOLVO CARS CORPORATION

Drill off the rear floor and the battery compartment. Fold up as illustrated.

Drill off the spot welds for the cover on the side member and cut as illustrated.

Pry off the cover.

Cut the side member as illustrated.

Drill off the reinforcement in the side member in front of the cutting point.

Pry off the side member with both the rear reinforcements.

Grind clean.

Apply welding primer.

Fig. 37: Preparation Of Side Member
Courtesy of VOLVO CARS CORPORATION

INSTALLING THE REAR SIDE MEMBER

Fig. 38: Installing The Rear Side Member
Courtesy of VOLVO CARS CORPORATION

Cut the replacement part.

Drill holes for the plug welds in the section of the reinforcement protruding from the member.

Slide in the reinforcement with the rear section of the side member.

Secure the replacement part.

Weld into place.

Install:

- the rear fender. See **REAR FENDER, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**
- the battery compartment. See **BATTERY COMPARTMENT, REMOVING**.

Seal. See **BODY SEAL** .

NOTE: **For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .**

Fig. 39: Installing Side Member
Courtesy of VOLVO CARS CORPORATION

SIDE MEMBER, UPPER, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE UPPER SIDE MEMBER

Remove components. See **FRONT SECTION, EXPOSING** .

Pull out the damage.

Determine the extent of the damage. See **FRONT SECTION, DIMENSIONS CHART** and **SIDE MEMBERS / WHEEL ARCHES FRONT, ALIGNMENT CHART** .

Drill and grind off the entire upper section of the member.

Fig. 40: Removing Upper Section Of Member
Courtesy of VOLVO CARS CORPORATION

The lower section of the side member is under the A-post, so cut as illustrated.

NOTE: **Often there will be deformation between the spring strut turret and the firewall (1) if the front of the car has been damaged.**

Grind clean.

Apply welding primer.

INSTALLING THE UPPER SIDE MEMBER

Fig. 41: Installing The Upper Side Member (1 of 2)
Courtesy of VOLVO CARS CORPORATION

Adjust and secure the replacement part. See **FRONT SECTION, DIMENSIONS CHART** .

Weld the replacement part into place.

Fig. 42: Installing The Upper Side Member (2 of 2)
Courtesy of VOLVO CARS CORPORATION

WHEEL HOUSING FRONT, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE FRONT WHEEL ARCH

Fig. 43: Removing The Front Wheel Arch
Courtesy of VOLVO CARS CORPORATION

Remove components. See **FRONT SECTION, EXPOSING** .

Grind off the welds.

Cut off the damaged section.

Grind clean.

Apply welding primer.

INSTALLING THE FRONT WHEEL ARCH

Align and secure the wheel arch. See **FRONT SECTION, DIMENSIONS CHART** and **SIDE MEMBERS / WHEEL ARCHES FRONT, ALIGNMENT CHART** .

Weld the replacement part into place.

WHEEL HOUSING REAR, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Remove the components. See **REAR SECTION, EXPOSING** and **SIDE SECTION, EXPOSING** .

Pull out the damaged section to make it easier to re-align internal components.

REMOVING THE REAR WHEEL ARCH

Remove:

- the rear fender. See **REAR FENDER, REPLACING**
- The C-post reinforcement. See **C-POST, REPLACING**.

Grind and drill out the spot welds.

Pry off the component.

Grind clean.

Apply welding primer.

INSTALLING THE REAR WHEEL ARCH

Fig. 44: Installing The Rear Wheel Arch
Courtesy of VOLVO CARS CORPORATION

Secure the wheel arch.

Check the alignment with the rear fender and door.

Weld into place.

Seal the wheel arch. See **BODY SEAL** .

Install:

- The C-post reinforcement. See **C-POST, REPLACING**
- the rear fender. See **REAR FENDER, REPLACING** .

FLOOR, FRAME SECTION, WHEEL ARCH, FIREWALL (2003-2004)

BATTERY COMPARTMENT, REMOVING

REMOVING

As the illustrations in this service information are used for different model years and / or models, some variation

may occur. However, the essential information in the illustrations is always correct.

REMOVING THE BATTERY COMPARTMENT

Remove components. See **REAR SECTION, EXPOSING** .

If necessary, remove:

- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**.

Determine the extent of the damage. See **BODY SEAL** and **BODY SIDE, ALIGNMENT CHART** .

Grind off the spot welds.

Pry off the battery compartment.

Grind clean.

Apply welding primer.

INSTALLING THE BATTERY COMPARTMENT

Fig. 45: Installing The Battery Compartment
Courtesy of VOLVO CARS CORPORATION

Secure the replacement part.

Weld into place.

Install:

- the inner rear section. See **REAR SECTION INNER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**

Seal according to **BODY SEAL** .

NOTE: For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .

COLLISION MEMBER, REPLACING

see **COLLISION MEMBER, REPLACING**

SIDE MEMBER FRONT, REPLACING

see **SIDE MEMBER FRONT, REPLACING**

SIDE MEMBER REAR, REPLACE

Special tools:

see **9997001**

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE REAR SIDE MEMBER

Fig. 46: Removing The Rear Side Member
Courtesy of VOLVO CARS CORPORATION

Remove components. See **REAR SECTION, EXPOSING** .

Correct the damage using an alignment bench. Use puller tool see **9997001** .

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Roughly cut at an appropriate point. See the recommended cutting points in the illustration.

If necessary, remove:

- the rear fender. See **REAR FENDER, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**
- the battery compartment. See **BATTERY COMPARTMENT, REMOVING**.

Fig. 47: Removing The Rear Side Member
Courtesy of VOLVO CARS CORPORATION

Drill off the rear floor and the battery compartment. Fold up as illustrated.

Drill off the spot welds for the cover on the side member and cut as illustrated.

Pry off the cover.

Cut the side member as illustrated.

Drill off the reinforcement in the side member in front of the cutting point.

Pry off the side member with both the rear reinforcements.

Grind clean.

Apply welding primer.

Fig. 48: Preparation Of Rear Side Member
Courtesy of VOLVO CARS CORPORATION

INSTALLING THE REAR SIDE MEMBER

Fig. 49: Installing The Rear Side Member
Courtesy of VOLVO CARS CORPORATION

Cut the replacement part.

Drill holes for the plug welds in the section of the reinforcement protruding from the member.

Slide in the reinforcement with the rear section of the side member.

Secure the replacement part.

Weld into place.

Install:

- the rear fender. See **REAR FENDER, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**
- the rear bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the inner rear section. See **REAR SECTION INNER, REPLACING**
- the battery compartment. See **BATTERY COMPARTMENT, REMOVING**.

Seal according to **BODY SEAL** .

NOTE: **For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .**

Fig. 50: Removing Side Member
Courtesy of VOLVO CARS CORPORATION

SIDE MEMBER, UPPER, REPLACING

see **SIDE MEMBER, UPPER, REPLACING**

WHEEL HOUSING FRONT, REPLACING

see **WHEEL HOUSING FRONT, REPLACING**

WHEEL HOUSING REAR, REPLACING

see **WHEEL HOUSING REAR, REPLACING**

REAR SECTION, PARCEL SHELF (2005-2012)

BUMPER RAIL REAR, REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE REAR BUMPER RAIL

Fig. 51: Removing The Rear Bumper Rail
Courtesy of VOLVO CARS CORPORATION

NOTE: The bumper rail is made of BORON steel. This material cannot be sawn, drilled through or realigned. For more information, see SHEET METAL, MATERIAL INFORMATION .

To access the spot welds, remove the outer tail panel. See **REAR SECTION OUTER, REPLACING**.

HINT: The tail panel can also be drilled off.

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Cut at a suitable point (see the recommended cutting points in the illustration).

Fig. 52: Removing Rear Bumper Rail
Courtesy of VOLVO CARS CORPORATION

Drill off the rear fender where it is secure to the rail.

Grind off the spot welds and bead welds.

Grind clean the surfaces to be spot-welded. Also grind the replacement part clean. There may be a deposit on the Boron steel which will prevent the weld from securing.

Apply welding primer to all the surfaces to be welded.

INSTALLING THE REAR BUMPER RAIL

Fig. 53: Installing The Rear Bumper Rail
Courtesy of VOLVO CARS CORPORATION

Secure and weld the replacement part into place.

NOTE: **Start welding from the center outwards. This is to reduce stress and make spot welding easier in the tough material.**

Seal. See **BODY SEAL** .

NOTE: **Always check the Whiplash element if the rear section of the car is damaged. See WHIPLASH UNIT, CHECKING .**

REAR SECTION INNER, REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE INNER REAR SECTION

Fig. 54: Removing The Inner Rear Section
Courtesy of VOLVO CARS CORPORATION

NOTE: The bumper rail and the inner rear section made of BORON steel.

BORON steel cannot be sawn, drilled through or realigned. For more information, see **SHEET METAL, MATERIAL INFORMATION** .

Remove components. See **REAR SECTION, EXPOSING** .

Remove the outer rear section. See **REAR SECTION OUTER, REPLACING**.

Fig. 55: Identifying Bumper Rail
Courtesy of VOLVO CARS CORPORATION

Roughly cut the bumper rail using a plasma torch or a cutter.

Fig. 56: Recommended Cutting Points
Courtesy of VOLVO CARS CORPORATION

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Cut at a suitable point (see the recommended cutting points in the illustration).

Grind off spot welds and the bead welds.

Pry off the inner rear section.

Grind clean.

INSTALLING THE INNER REAR SECTION

Fig. 57: Installing The Inner Rear Section
Courtesy of VOLVO CARS CORPORATION

Apply welding primer.

Secure and weld the replacement part into place.

Install:

- the bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**.

Seal. See **BODY SEAL** .

NOTE: **For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .**

REAR SECTION OUTER, REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE OUTER REAR SECTION

Fig. 58: Removing The Outer Rear Section
Courtesy of VOLVO CARS CORPORATION

Remove components. See **REAR SECTION, EXPOSING** .

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Cut at a suitable point (see the recommended cutting points in the illustration).

Joint (1) should be used to limit the painted surfaces on the rear fender.

Grind and drill out the spot welds and bead welds.

Pry off the rear section.

Grind clean.

INSTALLING THE OUTER REAR SECTION

Fig. 59: Installing The Outer Rear Section (1 of 2)
Courtesy of VOLVO CARS CORPORATION

Apply welding primer.

Use foam rubber replacement at (2).

Fig. 60: Installing The Outer Rear Section (2 of 2)
Courtesy of VOLVO CARS CORPORATION

Secure and weld the replacement part into place.

Seal. See **BODY SEAL** .

NOTE: **For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .**

REAR SECTION, PARCEL SHELF (2003-2004)

BUMPER RAIL REAR, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE REAR BUMPER RAIL

Fig. 61: Rear Bumper Rail
Courtesy of VOLVO CARS CORPORATION

NOTE: The bumper rail is made of BORON steel. This material cannot be sawn, drilled through or realigned. For more information, see SHEET METAL, MATERIAL INFORMATION .

To access the spot welds, remove the outer tail panel. See **ROOF SECTION, EXPOSING**.

HINT: The tail panel can also be drilled off.

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Cut at a suitable point (see the recommended cutting points in the illustration).

Fig. 62: Removing Rear Bumper Rail
Courtesy of VOLVO CARS CORPORATION

Drill off the rear fender where it is secure to the rail.

Grind off the spot welds and bead welds.

Grind clean the surfaces to be spot-welded. Also grind the replacement part clean. There may be a deposit on the Boron steel which will prevent the weld from securing.

Apply welding primer to all the surfaces to be welded.

INSTALLING THE REAR BUMPER RAIL

Fig. 63: Installing The Rear Bumper Rail
Courtesy of VOLVO CARS CORPORATION

Secure and weld the replacement part into place.

NOTE: **Start welding from the center outwards. This is to reduce stress and make spot welding easier in the tough material.**

Seal according to **BODY SEAL** .

NOTE: **Always check the Whiplash element if the rear section of the car is damaged. See WHIPLASH UNIT, CHECKING .**

ROOF SECTION, EXPOSING

PREPARATIONS

Remove the necessary components from the car according to the menu:

The front side door. See **PANEL, REAR SIDE DOOR, REPLACING**.

The rear side door. See **REPLACING THE FRONT DOOR SIDE PANEL**.

The rear side window. See **SIDE WINDOW, REAR, REPLACING** .

The windshield. See **WINDSCREEN REMOVAL** .

The rear windshield. See **REMOVING THE REAR WINDSHIELD** .

Weatherstrips.

Roof trim.

The cargo compartment. See **LOUDSPEAKER, D-POST, REPLACING** and **PANEL, TAILGATE, REPLACING** **LOCK MECHANISM, TAILGATE, REPLACING** **COMPONENTS COOL BOX REAR SEAT, REPLACING** .

The rear seat. See **REAR SEAT ASSEMBLY, REPLACEMENT**.

The front seats. See **LIFTING THE FRONT SEATS IN AND OUT** .

The floor carpets. See **FLOOR CARPET, FRONT, REPLACING** **FLOOR CARPET, REAR, REPLACING** .

The headlining:

- For 2003-2008, see **HEADLINING, REPLACING** .
- For 2009-2012, see **HEADLINING, REPLACING** .

The A-post panels. See **REPLACING THE A-POST PANEL**.

The B-post panels. See **PANEL B-POST, REPLACING** .

The C-post panels. See **PANEL C-POST, REPLACING** .

The D-post panels. See **PANEL D-POST, REPLACING** .

The front and rear sill trim panels See **FRONT DOOR SILL TRIM PANEL** and **SILL TRIM PANEL, REPLACING** .

The dashboard. See **DASHBOARD AND RADIO PANEL** .

The inflatable curtain. See **IC (INFLATABLE CURTAIN) MODULE, REPLACING** .

The inflatable curtains and seat belts:

- For front seat belts, see **SEAT BELT FRONT, REPLACING**
- For rear seat belts, see **SEAT BELT REAR, REPLACING** .

PANEL, REAR SIDE DOOR, REPLACING

REMOVING THE REAR SIDE DOOR PANEL

Fig. 64: Identifying Rear Side Door Side Panel, Clips, And Screw
Courtesy of VOLVO CARS CORPORATION

- Remove the cover and 1 screw
- Remove the 6 clips
- Disconnect the mechanical cable for the inner door opener
- Disconnect the connector
- Lift the panel upwards.

INSTALLING THE REAR SIDE DOOR PANEL

Install:

In reverse order.

NOTE: Ensure that the mounting for the mechanical cable for the inner door opener secures correctly in the fastener.

REPLACING THE FRONT DOOR SIDE PANEL

REMOVING THE PANEL FROM THE FRONT SIDE DOOR

Fig. 65: Removing Screws, Clips, And Cover From Door Panel
Courtesy of VOLVO CARS CORPORATION

Remove the cover from the mirror by pulling it straight outwards.

Detach the side piece handle at the bottom edge. Use a weatherstrip tool.

Remove:

- the two screws
- the eight clips.

Twist the panel outwards and upwards.

Disconnect the mechanical cable for the inner door opener.

Disconnect the connectors.

INSTALLING THE PANEL ON THE FRONT DOOR

Install:

- the connectors

- the mechanical cable for the inner door opener.

Hang the panel in position.

Install:

- the clips
- the screws
- the side piece handle
- the cover for the mirror.

NOTE: Ensure that the mounting for the mechanical cable for the inner door opener secures correctly in the clip.

Fig. 66: Installing Clips For Door Panel
Courtesy of VOLVO CARS CORPORATION

NOTE: Certain inner door sides do not have a hole for a clip. These door panels must be modified. Take a correctly colored door clip. Cut off the clip. Bond the clip to the door. Do not forget the center section of the clip.

Fig. 67: Binding Clip To Door
Courtesy of VOLVO CARS CORPORATION

LOUDSPEAKER, D-POST, REPLACING

REMOVING THE LOUDSPEAKER IN THE D-POST

Fig. 68: Identifying Loudspeaker In D-Post
Courtesy of VOLVO CARS CORPORATION

- Detach the loudspeaker grille by releasing it at the lower edge and pulling straight downwards
- Pull out the clips
- Angle out the loudspeaker. Disconnect the connector.

INSTALLING THE LOUDSPEAKER IN THE D-POST

Install:

In reverse order.

REAR SEAT ASSEMBLY, REPLACEMENT

- For center seat cushion trim (second row), see **UPHOLSTERY SEAT CUSHION CENTER (SECOND ROW), REPLACING** .
- For outer seat cushion trim (second row), see **UPHOLSTERY SEAT CUSHION OUTER (SECOND ROW), REPLACING** .
- For seat cushion trim (third row), see **UPHOLSTERY SEAT CUSHION (THIRD ROW), REPLACING** .
- For center seat backrest trim (second row), see **UPHOLSTERY BACKREST CUSHION CENTER (SECOND ROW), REPLACING** .

- For outer seat backrest trim (second row), see **UPHOLSTERY BACKREST CUSHION OUTER (SECOND ROW)** .
- For backrest trim (third row), see **UPHOLSTERY BACKREST CUSHION (THIRD ROW), REPLACING** .

REAR SECTION INNER, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE INNER REAR SECTION

Fig. 69: Removing The Inner Rear Section
Courtesy of VOLVO CARS CORPORATION

NOTE: The bumper rail and the inner rear section made of BORON steel.

BORON steel cannot be sawn, drilled through or realigned. For more information, see **SHEET METAL, MATERIAL INFORMATION** .

Remove components. See **REAR SECTION, EXPOSING** .

Remove the outer rear section. See **REAR SECTION OUTER, REPLACING**.

Fig. 70: Cutting Bumper Rail
Courtesy of VOLVO CARS CORPORATION

Roughly cut the bumper rail using a plasma torch or a cutter.

Fig. 71: Recommended Cutting Points
Courtesy of VOLVO CARS CORPORATION

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Cut at a suitable point (see the recommended cutting points in the illustration).

Grind off spot welds and the bead welds.

Pry off the inner rear section.

Grind clean.

INSTALLING THE INNER REAR SECTION

Fig. 72: Installing The Inner Rear Section
Courtesy of VOLVO CARS CORPORATION

Apply welding primer.

Secure and weld the replacement part into place.

Install:

- the bumper rail. See **BUMPER RAIL REAR, REPLACING**
- the outer rear section. See **REAR SECTION OUTER, REPLACING**.

Seal according to **BODY SEAL** .

NOTE: For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .

REAR SECTION OUTER, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE OUTER REAR SECTION

Fig. 73: Removing The Outer Rear Section
Courtesy of VOLVO CARS CORPORATION

Remove components. See **REAR SECTION, EXPOSING** .

Determine the extent of the damage. See **REAR END, ALIGNMENT CHART** and **BODY SIDE, ALIGNMENT CHART** .

Cut at a suitable point (see the recommended cutting points in the illustration).

Joint (1) should be used to limit the painted surfaces on the rear fender.

Grind and drill out the spot welds and bead welds.

Pry off the rear section.

Grind clean.

INSTALLING THE OUTER REAR SECTION

Fig. 74: Installing The Outer Rear Section (1 of 2)
Courtesy of VOLVO CARS CORPORATION

Apply welding primer.

Use foam rubber replacement at (2).

Fig. 75: Installing The Outer Rear Section (2 of 2)
Courtesy of VOLVO CARS CORPORATION

Secure and weld the replacement part into place.

Seal according to **BODY SEAL** .

NOTE: **For this type of damage, the whiplash system must be checked. See WHIPLASH UNIT, CHECKING .**

REPLACING THE A-POST PANEL

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE A-POST PANEL

NOTE: **There are two types - safety hook or safety clips - of mounting for the panel nearest the headlining.**

Fig. 76: Door Weatherstrip At Panel And Cutting Off Safety Clip
Courtesy of VOLVO CARS CORPORATION

- Detach the door weatherstrip at the panel (1)
- Pull the panel straight inwards into the car
- Lift upwards
- Cut off the safety clip or unhook the safety hook depending on the version (2).

NOTE: Ensure that the guide lugs on the panel do not scratch the dashboard.

Fig. 77: Identifying Safety Clip
Courtesy of VOLVO CARS CORPORATION

Turn the safety clip a quarter turn. Remove the clip.

INSTALLING THE A-POST PANEL

Install:

- a new safety clip or alternatively a new hook in the safety hook
- the panel
- weatherstrip.

NOTE: It is important that a new safety clip is used when installing.

NOTE: It is important that the clips or hooks are correctly positioned and that the panel is correctly positioned or the Inflatable Curtain (IC) may be negatively affected.

FRONT DOOR SILL TRIM PANEL

REMOVING THE SILL TRIM PANEL

Fig. 78: Identifying Sill Trim Panel
Courtesy of VOLVO CARS CORPORATION

- Pull the sill trim panel to release the front clip (1)
- Angle out the front edge of the frame (2)
- Detach the rear edge
- Pull out.

INSTALLING THE SILL TRIM PANEL

Install:

In reverse order.

ROOF, FRONT AND REAR WINDSHIELD FRAME (2003-2012)

CANTRAIL / ROOF SIDE, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PRINCIPLES OF JOINING

Fig. 79: Cut Panel Sections With a 50 mm Offset.
Courtesy of VOLVO CARS CORPORATION

Roof pillars must be joined as illustrated unless otherwise indicated in the method.

Cut the different panel sections with a 50 mm offset. This applies when replacing all roof pillars.

C = minimum 50 mm

HINT: When replacing a pillar, it is often difficult to identify where the deformation ends. It may be best to replace a larger section of the pillar.

REMOVING THE CANTRAIL / ROOF SIDE

Fig. 80: Removing The Cantrail / Roof Side
Courtesy of VOLVO CARS CORPORATION

Remove components. See **ROOF SECTION, EXPOSING** .

Pull or press out the damaged section to make it easier to re-align internal components.

Determine the extent of the damage. See **BODY SIDE, ALIGNMENT CHART** and **ROOF, ALIGNMENT CHART** .

NOTE: Do not replace too small a section of the cantrail / roof side because the damage may have spread.

Roughly cut at the appropriate point so that the old and new sections are overlapping. See the recommended cutting points in the illustration.

HINT: The cantrail is under the roof panel at the top edge.

Remove the roof panel. See **ROOF PANEL, REPLACING**.

If replacing the cantrail without replacing the roof panel, the cantrail must be cut from front to rear at the top edge and then bead welded back together.

Grind and drill out the spot welds and bead welds.

Pry off the cantrail.

Grind clean.

Apply welding primer.

INSTALLING THE CANTRAIL / ROOF SIDE

Fig. 81: Installing The Cantrail / Roof Side
Courtesy of VOLVO CARS CORPORATION

Install foam rubber replacement at (1). See **BODY SEAL** .

Secure the replacement part.

Saw through the two panels at the cutting points.

Take care not to damage the internal reinforcements when sawing.

Secure the edges of the joints by tack welding.

Complete the welding.

Seal the seams and joins. See **BODY SEAL** .

ROOF ARCH, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING ROOF ARCHES

Remove components. See **ROOF SECTION, EXPOSING** .

Fig. 82: Removing Roof Arches
Courtesy of VOLVO CARS CORPORATION

If necessary, remove the roof panel. See **ROOF PANEL, REPLACING**.

Drill out the spot welds.

Pry off the roof arch.

NOTE: The roof arch between the B-posts is manufactured of BORON steel. BORON steel cannot be straightened, sawn through or drilled. A cutter or plasma torch

should be used for removal.

For more information, see **SHEET METAL, MATERIAL INFORMATION** .

INSTALLING THE ROOF ARCH

Check the distance between the roof arches. See **ROOF, ALIGNMENT CHART** .

Apply welding primer.

Position and weld the roof arch into place.

NOTE: There is no roof member between the B-posts on cars with a sun roof.

The upper section of the rear roof member is made up of the upper section of the outer frame for the rear section.

NOTE: The corners must be bonded (adhesive P/N 116 1524) and spot welded. Note that the spot welds must be very close together.

Fig. 83: Installing Roof Arch
Courtesy of VOLVO CARS CORPORATION

Install the roof panel. See **ROOF PANEL, REPLACING**.

Fig. 84: Roof Panel
Courtesy of VOLVO CARS CORPORATION

ROOF PANEL, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE ROOF PANEL

NOTE: **When welding in the roof area, all components and the interior that have not been removed must be covered thoroughly. This protects against welding drops and spray.**

Fig. 85: Identifying Inner Cantrial Brackets
Courtesy of VOLVO CARS CORPORATION

Remove components. See **ROOF SECTION, EXPOSING** .

Drill off the spot welds at the front windshield, rear windshield and at the mountings for the rails.

Grind off the laser weld along the sides.

If the car has a sun roof:

Grind off the bracket on the inner cantrail (see the illustration).

Grind off the bead welds (four on each side) which hold the sun roof frame in the inner cantrail.

Remove the roof arch from the roof using a putty knife or piano wire.

WARNING: **Do not heat. There is a risk of toxic fumes.**

Lever carefully so as not to damage the cantrail.

Lift off the roof panel.

Check the distance between the cantrails. See **ROOF, ALIGNMENT CHART** .

Clean roof arches. Replace if necessary.

Grind all mating surfaces to bare metal.

INSTALLING THE ROOF PANEL

Fig. 86: Installing The Roof Panel
Courtesy of VOLVO CARS CORPORATION

Align a new roof panel.

Mark the roof arches using a pencil.

Lift off the roof panel.

Apply welding primer to the front and rear roof arches and at the mounting for the rail.

Apply welding primer (60 mm) on the surface where the bead weld will be applied (to points on each side and in the corners).

Apply adhesive (P/N 116 1524) to the cantrail or roof panel. Apply plenty of adhesive so that it squeezes out at the side when the rood is positioned.

Install the roof panel.

Secure using welding tongs.

Spot-weld the roof to the front and rear roof arches. Bead weld 15 mm as illustrated.

Bead weld the roof panel at the corners.

Wipe away the excess adhesive before it dries.

Fig. 87: Welding Sun Roof Unit
Courtesy of VOLVO CARS CORPORATION

If the car has a sun roof:

Weld the sun roof unit (see the illustration).

Fig. 88: Application Thickness
Courtesy of VOLVO CARS CORPORATION

Apply PUR adhesive between the roof plate and the cantrail.

A, B = 100 mm.

PUR adhesive can be applied after painting when the tension in the panel is released.

Fig. 89: Applying PUR Adhesive Between The Roof Plate And The Cantrail
Courtesy of VOLVO CARS CORPORATION

EXPLANATION OF DIMENSIONS

Fig. 33: Identifying Measurement Dimensions
Courtesy of VOLVO CARS CORPORATION

The dimensions in the table are listed as follows:

Symbol number 1 means that the measurement is taken from the center.

Symbol number 2 means that the measurement is taken from one edge.

Fig. 34: Identifying Measuring Point Symbol
Courtesy of VOLVO CARS CORPORATION

Symbol number 3 means that the measurement is taken from a cut mark. Measurements are taken from the bottom of the recess as shown.

If only one measuring point symbol is displayed, the symbol applies to both measuring points. Otherwise the symbols are shown on each side of the dimension shown.

Fig. 35: Identifying Dimension H1, H2 And H3
Courtesy of VOLVO CARS CORPORATION

H1 = 984 mm

H2 = 1046 mm

H3 = 1128 mm

ACCESSORIES AND BODY, CAB

Body Frame - Symptom Verification

PAINT FINISH (NOT INCLUDING TRIM) - UNEVEN COLOR/COLOR DIFFERENCES BETWEEN BODY PANELS

SYMPTOM AND FUNCTION DESCRIPTION

NOTE: The symptom should always be verified together with the customer.

The following tips may be of help to decide if the symptom is due to a product feature or if continued troubleshooting is needed.

HINT: Minor hue differences may exist between metal and plastic materials.

ACCESSORIES AND BODY, CAB

Bumpers And Mudflaps - Installation instructions, accessories

BUMPER BARS - FRONT BUMPER (2003-2006)

BUMPER BARS - FRONT BUMPER

NOTE: **During installation the underlying surface must be kept at a temperature of at least +20°C (68°F).**

NOTE: **Console sockets must be made for auxiliary lights where fitted.**

Fig. 1: Removing Number Plate And Plate Holder
Courtesy of VOLVO CARS CORPORATION

- Raise the car to a suitable working height.
- Remove the number plate and the number plate holder.

Fig. 2: Cleaning Off The Front
Courtesy of VOLVO CARS CORPORATION

- Clean off the front of the car and wipe dry.

Fig. 3: Identifying Two Markings
Courtesy of VOLVO CARS CORPORATION

Applies to cars without expander nuts for the number plate holder

- Pre-drill with a **5 mm (13/64')** diameter drill bit as per the two markings in the bumper cover.

  Drill out the holes to **11 mm (7/16')** and deburr the hole edges. Drill deep enough in the foam plastic so that the expander nuts can be pressed fully into the bumper cover.

Fig. 4: Identifying Expander Nut Tool 9512782
Courtesy of VOLVO CARS CORPORATION

Applies to cars without expander nuts for the number plate holder

- Take the expander nuts from the kit and tighten them in the bumper cover, use.

Fig. 5: Locating The Holder
Courtesy of VOLVO CARS CORPORATION

- Take the holder for one side from the kit and place it in the corner of the bumper cover panel, as illustrated. The holders are unique and only suit one of the two sides.
- Tape the holder securely to the body for marking the primer surfaces.
- Repeat the operation with the other holder.

Fig. 6: Identifying Two Recesses
Courtesy of VOLVO CARS CORPORATION

Applies to cars with auxiliary lights

- Saw/file out two recesses for the auxiliary lights' consoles in accordance with the markings on the inside of the decor panel top edge with a fine-toothed saw/file. Be careful with the tape.
- Even out the edges and remove the shavings.

Fig. 7: Pre-Drilling Holes
Courtesy of VOLVO CARS CORPORATION

- Pre-drill the holes for the number plate holder as per the existing markings on the inside using a **5 mm (13/64')** diameter drill bit. Drill out the holes using a **10 mm (25/64')** diameter drill bit.
- Even out the hole edges and remove the shavings.

Fig. 8: Checking That The Holes In The Panel Correspond
Courtesy of VOLVO CARS CORPORATION

- Press in the panel onto the taped holders and check that the holes in the panel correspond with the holes in the bumper cover.

  Test with the screws from the kit and file out the holes as necessary.

  If the panel is removed for adjusting the holes, then tape on the holders again.

Illustration A

Fig. 9: Securing To The Body With Two Screws
Courtesy of VOLVO CARS CORPORATION

- Press the panel onto the holders (if the panel was removed to adjust the holes). Secure it to the body with the two screws, for marking the surfaces for applying the primer. Adjust the position of the panel in accordance with Fig 21.

NOTE: Do not remove the panel's protective tape at this point.

Illustration B

Fig. 10: Marking the Outline
Courtesy of VOLVO CARS CORPORATION

- Tape the body just in front of where the panel's mounting tape shall adhere. Tape edge to edge with the panel's edge on both sides.
- Remove the panel from the body.

Fig. 11: Marking For Holes
Courtesy of VOLVO CARS CORPORATION

- Take the holder for one side from the kit and place it in the corner of the bumper cover panel as illustrated.
- Mark out for drilling holes in the bumper cover through the holes in the holder using a scriber.

Fig. 12: Drilling Out The Two Holes
Courtesy of VOLVO CARS CORPORATION

- Take a **5 mm (13/64')** diameter drill bit and drill out the two holes.
- Even out the hole edges and remove the shavings.

Fig. 13: Riveting The Holder
Courtesy of VOLVO CARS CORPORATION

- Take two pop rivets from the kit and rivet in the holder to the bumper cover.
- Repeat the operation with the other holder.

Illustration A

Fig. 14: Cleaning The Marked Surfaces
Courtesy of VOLVO CARS CORPORATION

- Clean the marked surfaces between the inner tape edge and the marked line using isopropanol part no. 1161721 and wipe dry. The surface to be coated with primer must be **8 - 10 mm (5/16' - 25/64')** wide, so adapt the cleaning to this.

Illustration B

Fig. 15: Cleaning The Marked Surfaces
Courtesy of VOLVO CARS CORPORATION

- Clean the right and left-hand sides.

APPLYING PRIMER TO THE BODYWORK

Illustration A

Fig. 16: Applying Primer To The Bodywork
Courtesy of VOLVO CARS CORPORATION

Illustration B

Fig. 17: Applying Primer To The Bodywork
Courtesy of VOLVO CARS CORPORATION

NOTE: **The temperature of the car must be at least 20 °C (68 °F) when installing the panel.**

CAUTION: The panel can be fitted at the earliest 15 minutes, and at the latest 3 hours, after applying the primer.

Applies to the right and left-hand sides:

- Take primer, P/N 1161727 for the painted surfaces, primer P/N 1161765 for the plastic surfaces in the lower section of the bumper cover, and cotton buds from the kit.

NOTE: **The primer must be applied to the whole car in one operation. Any spillage must be wiped up immediately.**

- Apply the primer between the inner tape edge and the marked line to a width of **8 - 10 mm (5/1 ' - 25/64')** .

  It is vital that no primer strays onto visible painted parts outside of the markings, especially at the top sides of the panels where there must be a space of approx. 1 mm between the primer and the inner tape marking.

- Carefully remove the tape when the primer has been applied.
- Allow the primer to harden for 15 minutes.

Fig. 18: Cutting The Two Spacer Sleeves
Courtesy of VOLVO CARS CORPORATION

Applies to cars with auxiliary lights

- Take the two spacer sleeves from the kit and cut them level with the larger collar so that the length is **9.5 mm (3/8')** .

Fig. 19: Installing Two Spacer Sleeves
Courtesy of VOLVO CARS CORPORATION

- Take two spacer sleeves and new screws from the kit. Install them together with decor panel and number plate holder.

NOTE: **The end of the spacer sleeve with a constriction must be turned toward the decor panel.**

Fig. 20: Detaching The Protective Backing Slightly
Courtesy of VOLVO CARS CORPORATION

- Detach the protective backing slightly on all of the decor panel's mounting tapes.

Illustration A

Fig. 21: Pressing The Decor Panel Into Both Holders
Courtesy of VOLVO CARS CORPORATION

- Position the decor panel carefully at the bumper cover without securing the tape.
- Screw in the screws until they have engaged the threads in the bumper cover. Make sure that the tape tabs are accessible for removing the protective backing.
- Carefully press the decor panel into both holders on the inside without securing the tape.
- Adjust so that the measurement (A) is equal on both sides.

Illustration B

Fig. 22: Adjust The Decor Panel And Peel Away The Protective Backing
Courtesy of VOLVO CARS CORPORATION

- Adjust the decor panel on both sides in accordance with illustration B:

  No play at point B.

  There should be play at the points C between decor panel and bumper cover so that the decor panel does not hang on the bumper cover.

- Carefully tear away all of the protective backing. Press the decor panel into the bumper cover so that the tape adheres. Press firmly all the way round.
- Tighten the number plate holder firmly and reinstall the number plate.

NOTE: Leave the car indoors for 2 hours after carrying out the work. Do not wash the car for 48 hours.

FRONT BUMPERS (2007-2012)

FRONT BUMPERS

NOTE: Applies to trim panels that are only primed.

CAUTION: The trim panel is manufactured of a PUR plastic which is very malleable. If the plastic part is not adequately supported in storage or when mounted during painting then there is significant risk that the plastic will change shape. Guide pins or other protruding parts must not bear the weight of a plastic part. Lay the plastic parts with support across a wide area. The malleability will be even greater when heated. Drying in an oven must not be used in temperatures above 50 C. The best method is to allow the plastic parts to dry in the air.

Fig. 23: Detaching The Existing Bumper
Courtesy of VOLVO CARS CORPORATION

- Detach the existing bumper by carefully prizing at the lower edge, between bumper and bumper cover, using a plastic weatherstrip tool. Following which, pull the bumper straight out so that the catches release.

Fig. 24: Aligning The New Bumper
Courtesy of VOLVO CARS CORPORATION

- Align the new bumper from the kit and press it in.

NOTE: Make sure that all of the catches engage.

MUDGUARD FRONT (2003-2012)

MUDGUARD FRONT

Fig. 25: Drilling Out The Four Rivets
Courtesy of VOLVO CARS CORPORATION

- Remove the front wheels
- Carefully drill out the four rivets holding the bumper liner at the rear edge of the front fender. Use a 6 mm (1/4") diameter drill bit
- Remove any rivet shavings.

NOTE: Do not damage any of the plastic components.

Fig. 26: Installing The Mudguard.
Courtesy of VOLVO CARS CORPORATION

- Install the mudguard. Rivet the mudguard into place in the bumper liner and the rear edge of the bumper cover
- Reinstall the front wheels. Tighten the wheels. Tighten to **140 Nm (103 lbf. ft)** .

REAR MUDGUARD (2003-2008)

REAR MUDGUARD

Fig. 27: Drilling Out The Rivets
Courtesy of VOLVO CARS CORPORATION

- Raise the car
- Remove the rear wheels

- Carefully drill out the rivets holding the fender liner and the bumper cover. Use a **6 mm (1/4 ")** diameter drill bit. Do not damage any of the plastic components.

Fig. 28: Riveting The Mudguard
Courtesy of VOLVO CARS CORPORATION

- Rivet the mudguard in the fender liner and the bumper cover
- Reinstall the wheels. Tighten to **140 Nm (104 lbf. ft)**
- Lower the car.

REAR SKID PLATE (2003-2008)

REAR SKID PLATE

- Cut out the cover following the markings on the inside
- Even off the edges using a file.

Fig. 29: Cutting The Cover Following The Markings

Courtesy of VOLVO CARS CORPORATION

Fig. 30: Drilling Nine Countersink Markings In The Skid Plate
Courtesy of VOLVO CARS CORPORATION

- Drill out the nine countersink markings in the skid plate. Use an **8 mm (5/16")** diameter drill bit. Drill in the centre of the countersinks.
- If necessary, even off the edges using a small round file.
- Clean the section of the bumper surface that will be covered by the skid plate.

Illustration A

Fig. 31: Aligning The Skid Plate Symmetrically
Courtesy of VOLVO CARS CORPORATION

NOTE: Two people are required for this operation.

- Align the skid plate at the sides by holding it in position so that it is aligned with the embossing at the exhaust pipe. If the car has a towbar, the skid plate must be aligned symmetrically with the vertical mounting brackets for the towbar.
- Align the skid plate vertically so that the embossing is at the same level as the embossing on the bumper seen from immediately behind.

Illustration B

Fig. 32: Marking and Drilling Holes For The Screws
Courtesy of VOLVO CARS CORPORATION

- Accurately mark the holes for the screws by pressing through the holes in the skid plate using a pointed tool
- Remove the skid plate. First drill out the holes. Use a **6 mm (15/64 ")** diameter drill bit. Then enlarge the holes using a **12.5 mm (1/2")** diameter drill bit. Drill at right angles to the underlying surface. Do not enlarge the holes excessively or the rubber nut may not secure.
- Remove any shavings. Clean around the edges of the holes.

Illustration A

Fig. 33: Identifying Three Screws and Three Rubber Nuts
Courtesy of VOLVO CARS CORPORATION

- Take three screws and thread them through the three upper / middle holes in the skid plate. Take three rubber nuts and screw them 2-3 turns on to the three screws. The rubber nuts must be turned so that the threaded ends enter into the holes in the bumper during installation.

Illustration B

Fig. 34: Placing The Other Rubber Nuts Into Drilled Holes
Courtesy of VOLVO CARS CORPORATION

- Press the other rubber nuts into place in the drilled holes in the bumper, with the threaded ends first
- Press the skid plate all the way into place in the three upper / centre holes in the bumper
- Screw in the other screws as far as they will go
- Tighten the skid plate with the screws. Tighten to **1.5-2 Nm (1-1.5 lbf. ft.)** .

SIDE PANEL (2004-2006)

SIDE PANEL

NOTE: Install the side panel in the same way on both sides of the car.

PREPARATIONS

- Wash and degrease the car.

NOTE: It is important that the surfaces on which the side panels will be mounted are completely free of tar and other road dirt.

Remove the front wheel arch extension (secured by three hooks at the bottom, tape at the top, five clips and six rivets):

Illustration A

Fig. 35: Drilling Out The Six Rivets
Courtesy of VOLVO CARS CORPORATION

- Drill out the six rivets (1) holding the front wheel arch extension to the edge of the wheel arch. Use a **6 mm (1/4")** diameter drill bit.
- Remove the remains of the rivets.

Illustration B

Fig. 36: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the front lower edge of the wheel arch extension. Use a plastic weatherstrip tool.

NOTE: Do not damage the paint work.

- Fold out the front lower edge of the wheel arch extension to expose the first mounting clip
- Insert the weatherstrip tool at the side of the clip, between the panel and the wheel arch extension. Twist the weatherstrip tool to pull the clip away from the edge of the wheel arch or so that it breaks
- Then continue in the same way until all five clips have released
- Remove the wing extension. Place the wing extension to one side. This will not be reused.

Removing the lower trim strip on the front door:

Fig. 37: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Use the weatherstrip tool to pry the rear edge of the trim strip until the tape comes away at the bottom and top edges.

NOTE: Do not damage the paint work.

- Push the trim strip to one side to expose the first clip
- Remove the clip in the same way as for the clips on the wheel arch extension
- Pry the trim strip off working forwards. Remove the last clip in the same way as previously
- Place the trim strip to one side. This will not be reused.

Remove the upper trim strip on the front door:

Illustration A

Fig. 38: Removing The Parking Lamp
Courtesy of VOLVO CARS CORPORATION

- Remove the parking lamp. Carefully pry off the bottom edge. The parking lamp has a cut out on its lower edge to make prying it off easier
- Disconnect the connector from the parking lamp.

NOTE: Ensure that the connector does not fall into the door.

Illustration B

Fig. 39: Using Weatherstrip Tool To Pry The Rear Edge
Courtesy of VOLVO CARS CORPORATION

- Use the weatherstrip tool to pry the rear edge of the trim strip until the tape comes away at the bottom and top edges.

NOTE: Do not damage the paint work.

- Continue to pry off the trim strip working forwards until it has detached completely
- Place the trim strip to one side. This will not be reused.

Remove the lower trim strip on the rear door:

- Carry out the same procedure as for the front door, but start at the front of the trim strip and work backwards
- Place the trim strip to one side. This will not be reused.

Removing the upper trim strip on the rear door:

- Carry out the same procedure as for the front door, but start at the front of the trim strip and work backwards
- Place the trim strip to one side. This will not be reused.

Removing the rear wheel arch extension (secured by two hooks at the rear bottom edge, tape at the top, six clips and four rivets):

Illustration A

Fig. 40: Drilling Out The Four Rivets
Courtesy of VOLVO CARS CORPORATION

- Drill out the four rivets (1) holding the wheel arch extension to the edge of the wheel arch. Use a **6 mm (1/4")** diameter drill bit.
- Remove the remains of the rivets.

Illustration B

Fig. 41: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the front lower edge of the wheel arch extension. Use a plastic weatherstrip tool.

NOTE: Do not damage the paint work.

- Fold out the front lower edge of the wheel arch extension to expose the first mounting clip
- Insert the weatherstrip tool at the side of the clip, between the panel and the wheel arch extension. Twist

the weatherstrip tool to pull the clip away from the edge of the wheel arch or so that it breaks
- Then continue in the same way until all six clips have released
- Pull the two mounting hooks at the rear edge of the wheel arch extension off from their mountings
- Remove the wing extension. Place the wing extension to one side. This will not be reused.

Fig. 42: Removing Stone-Chip Protection
Courtesy of VOLVO CARS CORPORATION

- Remove the stone-chip protection at the rear edge of the rear door.

Fig. 43: Releasing The Catch In The Body
Courtesy of VOLVO CARS CORPORATION

- Grip the bumper shell at point (1) and pull it out slightly so that the weatherstrip tool can be inserted in the opening formed.
- Position and turn the weatherstrip tool in the lower edge of each mounting hook (approx. in front of the three arrows) so that they release from the catch in the body.
- Carefully pull the bumper shell end with the small painted panel in the top edge from the body starting

from the front. It is held in place by four clips.

Fig. 44: Loosening The Small Painted Panel
Courtesy of VOLVO CARS CORPORATION

- Bend the small painted panel loose from the bumper shell end and then pull it off at an angle upwards. It is held in place by ten mounting hooks along its periphery. Lay it aside. It will not be used again.

Fig. 45: Locating Bumper Shell End Into The Catches
Courtesy of VOLVO CARS CORPORATION

- Press the bumper shell end into the catches in the body. Make sure that all seven mounting hooks engage.

Fig. 46: Installing Clamp From The Kit
Courtesy of VOLVO CARS CORPORATION

- Remove the screw and washer from the rear edge of the bumper shell end.
- Take the clamp from the kit and tighten it with the screw and washer as illustrated. The clamp should fix the bumper shell end against the body.

Fig. 47: Using Cleaner H (1161436)
Courtesy of VOLVO CARS CORPORATION

- Wash the entire surface of where the new decor panels and wing extensions shall sit. Use cleaner H (part no. 1161436).
- Wipe dry

MARKING THE PRIMER SURFACE ON THE BODYWORK

NOTE: Two people must help each other to mark the primer surface on the bodywork.

- Remove the side panel components from the packaging
- Check how the mounting tape is positioned on the components. This determines where the primer must be applied and where the markings must be made
- Clean the backing tape using a moist cloth. Use a mixture of 30% windscreen washer fluid and 70% water.

NOTE: There must not be any dirt or grease on the backing tape on the panel. This could contaminate the bodywork when making markings in the next step.

- Wipe dry

Test mount the panels according to points 19-22.

Illustration A

Fig. 48: Checking Alignment
Courtesy of VOLVO CARS CORPORATION

- Check that the embossings (1) in the rear edge of the front door and the corresponding rear door are in the centre of the cut out (2) in the relevant side panel (both door panels should end up at the same height horizontally).

NOTE: Leave the backing tape for the mounting tape in place. Ensure that the panels are aligned horizontally.

Illustration B

Fig. 49: Marking The Outer Contours Of The Panels
Courtesy of VOLVO CARS CORPORATION

- Mark the outer contours of the panels using a Whiteboard pen.

Fig. 50: Measuring From The Upper Marking (1)
Courtesy of VOLVO CARS CORPORATION

Marking the centre panel tape

- Measure from the upper marking (1) and mark out a line (2) for the centre panel tape. On the front door, the distance between the lower limits of the markings must be 180 mm (7 1/16"). On the rear door, the corresponding distance must be 190 mm (7 1/2").

INSTALLING THE SIDE PANEL

NOTE: The temperature of the car must be at least 20°C (68°F) when installing the side panels.

NOTE: Two people must help each other to align and secure the side panels.

NOTE: The panels must be installed according to the markings.

APPLYING PRIMER TO THE BODYWORK

CAUTION: The side panels must be installed at the earliest 15 minutes, and at the latest 3 hours, after applying the primer.

- Take the primer (part no. 1161727) and cotton buds from the kit.

Fig. 51: Applying Primer To The Bodywork
Courtesy of VOLVO CARS CORPORATION

NOTE: The primer must be applied to the whole car in one operation. Any spillage must be wiped up immediately.

- Apply the primer inside the outer contours of the panels. It is important that nothing goes outside the markings, particularly on the upper sides of the panels, where there should be a space of approximately 1 mm between the primer and the marking.
- Apply the primer immediately below the markings for the central mounting tape for the panel
- Allow the primer to harden for 15 minutes.

Fig. 52: Removing The Tape Backing
Courtesy of VOLVO CARS CORPORATION

Applies to all components

- Remove the backing tape at each corner of the panel.

Applies to the door panels

- Remove the backing tape from the middle of the panel.

SECURING THE FRONT WING SIDE PANEL

Illustration A

Fig. 53: Adjust The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

Carried out by two people, one at the front and one at the rear of the side panel:

- Carefully insert the panel locating pins in the holes in the edges of the wing
- Move the panel as close as possible to the wing without the tape on the corners securing. Adjust the panel. There must be parallel vertical play between the panel and the rear edge of the front wing
- Press the panel into place at the upper corners (A). Carefully remove the upper backing tape (B) by pulling it off from both sides at the same time.

NOTE: Ensure that the backing tape does not come off the reverse of the panel as the panel may lie firmly against the front wing.

- Press the upper section of the side panel (C) into place on the front wing so that it is firmly secure.

Illustration B

Fig. 54: Remove Tape Backing and Press The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Remove the backing tape on the sides (A) of the panel.

NOTE: Ensure that the backing tape does not come off on the reverse of the panel.

- Press the panel into place on the front wing at every point that there is tape (C)
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.

SECURING THE REAR WING SIDE PANEL

Fig. 55: Identifying Four Mounting Hooks and Locating Pins
Courtesy of VOLVO CARS CORPORATION

Carried out by two people, one at the front and one at the rear of the side panel:

- Insert the four mounting hooks in the rear edge of the side panel in the corresponding recess in the bumper shell end.
- Bend the panel in toward the rear wing while making sure that each side panel locating pin fits in the corresponding hole in the edge of the wheel arch.
- Follow the same procedure for the front wing. The front edge of this panel, however, will not need adjustment as the position is fixed against the door sill.

SECURING THE SIDE PANEL FOR THE REAR DOOR

Illustration A

Fig. 56: Inserting Locating Pins
Courtesy of VOLVO CARS CORPORATION

Carried out by two people, one at the front and one at the rear of the side panel:

- Carefully insert the panel locating pins in the holes in the door
- Move the panel as close as possible to the door without the tape on the corners securing. Ensure that the rear upper corner of the panel follows the same line as the side panel for the rear wing (there is little clearance between the locating pins and the holes in the side of the door)
- Press the panel into place at the upper corners (A). Carefully remove the upper backing tape (B) by pulling it off from both sides at the same time.

NOTE: Ensure that the backing tape does not come off on the reverse of the panel as the panel may be firmly attached to the door.

- Press the upper section of the panel (C) into place on the door. Press the panel so that it is firmly secured.

Illustration B

Fig. 57: Removing The Backing Tape, Apply Pressure
Courtesy of VOLVO CARS CORPORATION

- Remove the backing tape on the sides (A) and lower edge (B) of the panel.

NOTE: Ensure that the backing tape does not come off on the reverse of the panel.

- Press the panel into place on the door at every point where there is tape (C)
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.

SECURING THE FRONT DOOR SIDE PANEL

Illustration A

Fig. 58: Inserting Locating Pins
Courtesy of VOLVO CARS CORPORATION

Illustration B

Fig. 59: Removing The Backing Tape, Apply Pressure
Courtesy of VOLVO CARS CORPORATION

- Carry out the same procedure as for the rear door. Ensure that the rear edge of the panel is parallel with the rear edge of the door. In addition, adjust the height of the panel so that the top is in line with the panels for the rear door and the front wing.

FINISHING WORK

- Remove the Whiteboard ink from the car. Use a rag.
- Reconnect the connector to the lamp
- Press the parking lamp into the hole in the side panel. Ensure that the parking lamp clips into place correctly.

Fig. 60: Folding In The Mounting Lugs
Courtesy of VOLVO CARS CORPORATION

- Fold in the mounting lugs on the front wing side panel so that the holes in the mounting lugs align with the holes in the wing liner.

Fig. 61: Cutting Holes For The Mounting Lug (1
Courtesy of VOLVO CARS CORPORATION

Applies to cars missing a hole in the inner wing for the mounting lug for the panel

- Certain cars do not have holes for the mounting lug (1) on the left and right-hand sides. In these cases the holes must be carefully cut. Use a knife or a hacksaw blade
- Fold the mounting lug in (the second mounting lug in the front edge of the panel counted from underneath) and saw off at the crack which forms
- Smooth off the edges using a file
- Repeat the operation on the other panel.

Illustration A shows the rear wheel

Fig. 62: Riveting Edges Of The Wheel Arch Extensions
Courtesy of VOLVO CARS CORPORATION

Illustration B shows the front wheel

Fig. 63: Riveting Edges Of The Wheel Arch Extensions
Courtesy of VOLVO CARS CORPORATION

- Rivet the edges of the wheel arch extensions to the wing liner along the edges of the wheel arches. Do this on both the front and rear wheels. Use the rivets from the kit.

Illustration A shows the front edge of the rear door

Fig. 64: Applying Tape Over a Visible Gap.
Courtesy of VOLVO CARS CORPORATION

Illustration B shows the rear edge of the front door

Fig. 65: Applying Tape Over a Visible Gap.
Courtesy of VOLVO CARS CORPORATION

- If there is a visible gap between the black painted lower section of the side panel and the front edge of the rear door or the rear edge of the front door: cut the supplied tape to the same length as the lower gap. Apply the tape.

- The car must be kept dry and at a temperature of at least 15°C (59°F) for 2 hours
- Do not wash the car for 72 hours after installing the side panel.

WHEEL ARCH EXTENSIONS (2003-2009)

WHEEL ARCH EXTENSIONS

REMOVAL

NOTE: During installation the underlying surface must maintain a temperature of at least +20°C (68°F).

REMOVING THE FRONT WHEEL ARCH EXTENSIONS

Fig. 66: Drilling Out The Six Rivets
Courtesy of VOLVO CARS CORPORATION

- The front wheel arch extensions are secured with three catches in the lower edge, tape in the top edge, five clips and six pop rivets.

  Drill out the six pop rivets (1) holding the front wheel arch extension to the edge of the wheel arch. Use a **6 mm (1/4")** diameter drill bit.

- Remove the remains of the rivets.

Fig. 67: Using A Plastic Weatherstrip Tool

Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the front lower edge of the wheel arch extension. Use a plastic weatherstrip tool.

  NOTE: Do not damage the paint work.

- Fold out the front lower edge of the wheel arch extension to expose the first mounting clip.
- Insert the weatherstrip tool at the side of the clip, between the panel and the wheel arch extension. Twist the weatherstrip tool to pull the clip away from the edge of the wheel arch or so that it breaks.
- Then continue in the same way until all five clips have released.
- Remove the wing extension. Place the wing extension to one side. This will not be reused.

REMOVING THE REAR WHEEL ARCH EXTENSIONS

Fig. 68: Drilling Out The Four Rivets
Courtesy of VOLVO CARS CORPORATION

- The rear wheel arch extensions are secured with two catches in the rear lower edge, tape in the top edge, six clips and four pop rivets.

  Drill out the four pop rivets (1) holding the wheel arch extension to the edge of the wheel arch. Use a **6 mm (1/4")** diameter drill bit.

- Remove the remains of the rivets.

Fig. 69: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the front lower edge of the wheel arch extension. Use a plastic weatherstrip tool.

NOTE: Do not damage the paint work.

- Fold out the front lower edge of the wheel arch extension to expose the first mounting clip.
- Insert the weatherstrip tool at the side of the clip, between the panel and the wheel arch extension. Twist the weatherstrip tool to pull the clip away from the edge of the wheel arch or so that it breaks.
- Then continue in the same way until all six clips have released.
- Pull the two mounting hooks at the rear edge of the wheel arch extension off from their mountings.
- Remove the wing extension. Place the wing extension to one side. This will not be reused.

Fig. 70: Cleaning The Marked Surface
Courtesy of VOLVO CARS CORPORATION

- Clean the marked surface around the edge of the wheel arch where the tape shall be affixed using

isopropanol P/N 1161721. Wipe dry.

- Clean the corresponding surface on the edge of the wheel arch for the rear wheel.
- Repeat steps for the other side.

INSTALLATION

APPLYING THE PRIMER TO THE BODY

Fig. 71: Applying The Primer To The Body
Courtesy of VOLVO CARS CORPORATION

CAUTION: The wheel arch extensions can be installed at the earliest 15 minutes or at the latest 3 hours after application.

- Take the primer (P/N 1161727) and cotton buds from the kit.

NOTE: The primer must be applied to the car in one operation, and any spillage must be wiped up immediately.

- Apply primer to the surfaces where the tape shall adhere. Make sure that there is no primer outside of the surfaces to which the tape shall adhere.
- Allow the primer to harden for 15 minutes.

Fig. 72: Inserting Guide Pins
Courtesy of VOLVO CARS CORPORATION

- Detach the backing from the mounting tape at the ends of the new wheel arch extension to the front wing in order to facilitate removal when the wheel arch extension is installed.
- Insert the wheel arch extension guide pins in the corresponding holes around the edge of the wheel arch.

Fig. 73: Checking The Lower Edge
Courtesy of VOLVO CARS CORPORATION

- Check that the lower edge of the front wing's rear edge is level with the corresponding edge of the wheel arch extension.

Fig. 74: Removing The Remainder Of The Tape Backing And Pressing In
Courtesy of VOLVO CARS CORPORATION

- Press in the ends of the wheel arch extension where the tape was detached.
- Remove the remainder of the backing and press in the wheel arch extension so that the tape is firmly applied. At the same time make sure that the upper edge of the wheel arch extension follows the edge of the wing.

Fig. 75: Folding In The Mounting Lugs
Courtesy of VOLVO CARS CORPORATION

- Fold in the mounting lugs on the front wing's wheel arch extension so that the holes in the mounting lugs align with the holes in the wing liner.

Fig. 76: Riveting The Wheel Arch Extension
Courtesy of VOLVO CARS CORPORATION

- Take five pop rivets from the kit and securely rivet the wheel arch extension with the wing liner to the edge of the wheel arch.

Fig. 77: Removing Ends Of The Tape Backing
Courtesy of VOLVO CARS CORPORATION

- Detach the backing from the mounting tape at the ends of the wheel arch extension to the rear wing in order to facilitate removal when the wheel arch extension is installed.

Fig. 78: Removing The Remainder Of The Tape Backing And Pressing In
Courtesy of VOLVO CARS CORPORATION

- Press in the ends of the wheel arch extension where the tape was detached.
- Remove the remainder of the backing and press in the wheel arch extension so that the tape is firmly applied. At the same time make sure that the upper edge of the wheel arch extension follows the edge of the wing.
- Take four pop rivets from the kit and securely rivet the wheel arch extension to the edge of the wheel arch.
- Repeat steps for the other side.

NOTE: Keep the car indoors for 2 hours after the work has been completed and do not wash the car for 48 hours.

BODY KIT (2007-2010)

BODY KIT

NOTE: Accessories such as parking assistance, front/rear and tow bars should be installed on the car before the body kit.

- Wash and degrease the car.

NOTE: It is important that the surfaces on which the side panels will be mounted are completely free of tar and other road dirt.

REMOVING THE FRONT WHEEL ARCH EXTENSIONS

Illustration A

Fig. 79: Drilling Out The Six Rivets
Courtesy of VOLVO CARS CORPORATION

- Drill out the five pop rivets (1) holding the front fender widener to the edge of the wheel arch. Use a **6 mm " (1/4")** diameter drill bit.
- Remove the rivet shavings and ensure that none remains in the holes.

Illustration B

Fig. 80: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the front lower edge of the wheel arch extension. Use a plastic weatherstrip tool.

NOTE: Do not damage the paint work.

- Fold out the front lower edge of the wheel arch extension to expose the first mounting clip
- Insert the weatherstrip tool at the side of the clip, between the panel and the wheel arch extension. Twist

the weatherstrip tool to pull the clip away from the edge of the wheel arch or so that it breaks.
- Then continue in the same way until all five clips have released.
- Remove the wing extension. Place the wing extension to one side. This will not be reused.

REMOVAL OF THE LOWER TRIM STRIP ON THE FRONT AND REAR DOORS.

Fig. 81: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Use the weatherstrip tool to pry the rear edge of the trim strip until the tape comes away at the bottom and top edges.

NOTE: Do not damage the paint work.

- Push the trim strip to one side to expose the first clip
- Remove the clip in the same way as for the clips on the wheel arch extension
- Pry the trim strip off working forwards. Remove the last clip in the same way as previously
- Place the trim strip to one side. This will not be reused.

REMOVING THE REAR WHEEL ARCH EXTENSIONS

Illustration A

Fig. 82: Drilling Out The Four Rivets
Courtesy of VOLVO CARS CORPORATION

- Drill out the four pop rivets (1) holding the fender widener to the edge of the wheel arch. Use a **6 mm " (1/4")** diameter drill bit.
- Remove the rivet shavings and ensure that none remains in the holes.

Illustration B

Fig. 83: Using A Plastic Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the front lower edge of the wheel arch extension. Use a plastic weatherstrip tool.

NOTE: Do not damage the paint work.

- Fold out the front lower edge of the wheel arch extension to expose the first mounting clip
- Insert the weatherstrip tool at the side of the clip, between the panel and the wheel arch extension. Twist

the weatherstrip tool to pull the clip away from the edge of the wheel arch or so that it breaks.
- Then continue in the same way until all six clips have released.
- Pull the two mounting hooks at the rear edge of the wheel arch extension off from their mountings.
- Remove the wing extension. Place the wing extension to one side. This will not be reused.

REMOVING STONE-CHIP PROTECTION

Fig. 84: Removing Stone-Chip Protection
Courtesy of VOLVO CARS CORPORATION

- Remove the stone-chip protection at the rear edge of the rear door.

CLEANING PANEL SURFACES

Fig. 85: Using Cleaner H (1161436)
Courtesy of VOLVO CARS CORPORATION

- Wash the entire surface of where the new decor panels and fender wideners shall be installed. Use cleaner

H **part no. 1161436** .

- Wipe dry.

MARKING THE PRIMER SURFACE ON THE BODYWORK

NOTE: Two people must help each other to mark the primer surface on the bodywork.

- Remove the side panel components from the packaging
- Check how the mounting tape is positioned on the components. This determines where the primer must be applied and where the markings must be made
- Clean the protective film with a moist cloth. Use a mixture of 30% windshield washer fluid and 70% water.

NOTE: There must not be any dirt or grease on the protective film on the panel. This could contaminate the bodywork when making markings in the next step.

- Wipe dry.

MARKING THE PANELS' OUTER CONTOURS

Fig. 86: Checking The Panels Fit And Marking The Outer Contours
Courtesy of VOLVO CARS CORPORATION

- Check-fit the panels and mark these outer contours with a Whiteboard pen.

NOTE: Leave the mounting tape's protective film in place and make sure that the panels are aligned horizontally.

- Install clips on side panel (door) 8 pcs.

APPLYING PRIMER TO THE BODYWORK

- Take the primer **part no. 1161727** and cotton buds from the kit.

NOTE: The primer must be applied to the whole car in one operation. Any spillage must be wiped up immediately.

- Apply primer inside the panels' outer contours.

NOTE: It is important that nothing ends up outside the markings, especially by the panels' top sides where there shall be a gap of approx. 1 mm between the primer and the marking.

- Allow the primer to harden for 15 minutes.

CAUTION: The side panels shall be installed at the earliest 15 minutes, and at the latest 3 hours, after applying the primer.

FASTENING SIDE PANEL, FRONT FENDER

Fig. 87: Pressing The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Fold up the protective film on the sides of the panel (A).

NOTE: Be careful so that the protective film does not come off on the back of the panel.

- Make sure that the measurement **2mm (5/64")** between trailing edge fender widener and the front fender's trailing edge is obtained (B).
- Press the panel into place against the front fender at every point that there is tape.
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.

FASTENING SIDE PANEL, REAR FENDER

Fig. 88: Pressing The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Open the back door.
- Bend in the panel against the rear fender while making sure that the side panel's guide pin fits in the corresponding hole in the edge of the wheel arch (1).
- Place the raised edge (guide edge) on the fender widener butt-to-butt with bumper as shown (2).
- Place the corner in the door opening (3).

NOTE: Make sure that the panel does not touch the back door.

- Fold up the protective film on the sides and the lower edge of the panel.

NOTE: Be careful so that the protective film does not come off on the back of the panel.

- Press the panel into place against the rear fender at every point that there is tape.
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.

FASTENING SIDE PANEL, BACK DOOR

Fig. 89: Pressing The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Fold up the protective film over the edge of the panel.
- Remove the lower protective film on the side panel.
- Fold in the panel with the lower edge first and carefully insert the panel's guide pin as well as click in the two clips in the door side's hole without fastening the tape on the panel's corners.
- Move the panel as close as possible to the door side without the tape in the corners fastening.
- Make sure that the panel's rear upper corner (1) follows the same line as the rear fender's side panel (there is some clearance between the guide pins and the holes in the door side).
- Press the panel into place at the upper corners and carefully remove the upper protective film by pulling it off from both ends at the same time.

NOTE: **Make sure that the protective film does not come off on the back of the panel. The panel may have contact with the side of the door with some pressure.**

- Press the upper section of the panel into place against the side of the door. Press the panel so that it is firmly secured.
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.

FASTENING DECOR STRIP, BACK DOOR

Fig. 90: Pressing The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Remove the protective film on the strip and move it in to correct position on the side panel.
- Make sure that the line between the decor strip and panel is obtained by pressing up the upper corners on the strip (1).
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.
- Press in the 5 clips in the lower edge on the side panel.

FASTENING SIDE PANEL, FRONT DOOR

Fig. 91: Pressing The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Fold up the protective film on the panel's upper edge.
- Loosen the lower protective film on the side panel.
- Fold in the panel with the lower edge first, carefully insert the panel's guide pin as well as click in the two clips in the door side's hole without fastening the tape on the panel's corners.

- Make sure that the panel's rear/upper corner follows the same line as the back door's side panel (there is some clearance between the guide pins and the holes in the door side).
- Press the panel into place at the upper corners and carefully remove the upper protective film by pulling it off from both ends at the same time.

NOTE: Make sure that the protective film does not come off on the back of the panel. The panel may have contact with the side of the door with some pressure.

- Press the upper part of the panel into place against the side of the door. Press the panel so that it is firmly secured.
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.

FASTENING DECOR STRIP, FRONT DOOR

Fig. 92: Pressing The Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Remove the protective film on the strip and move it in to correct position on the side panel.
- Make sure that the line between the decor strip and panel is obtained by pressing up the upper corners on the strip (1).
- Apply a pressure of **1-2 kg/cm^2 (14-28 lbf/in^2)** around the entire panel so that the tape sticks firmly.
- Press in the 5 clips in the lower edge on the side panel.

Fig. 93: Folding In The Mounting Lugs
Courtesy of VOLVO CARS CORPORATION

- Fold in the mounting lugs on the front fender's side panel, so that the holes in these align with the holes in the fender liner.

Fig. 94: Riveting The Fender Widener
Courtesy of VOLVO CARS CORPORATION

- Pop rivet the fender widener's edges to the fender liners along the wheel arches in the front fender.

Fig. 95: Riveting The Fender Widener
Courtesy of VOLVO CARS CORPORATION

- Pop rivet the fender widener's edges to the fender liners along the wheel arches in the rear fender.

- Remove the whiteboard markings with a dry rag.
- The car must be kept dry and at a temperature of at least 15 C (59 F) for 2 hours
- Do not wash the car for 72 hours after installing the side panels.

SIDE DECOR REPAIR KIT (2007-2009)

SIDE DECOR REPAIR KIT

RETAPING THE SIDE PANEL

- Remove the side panel from the car.
- Remove the glue residue from the car. Clean the surfaces with a mixture of 70% Isopropanol and 30% water.
- Wipe clean.

- Remove the tape residue from the side panel.

NOTE: **Do not use solvent. The tape residue is removed mechanically with a rotating stripe remover, or a piece of rubber. Ensure you do not damage the surfaces of the side panel where the new tape is to be applied.**

- Clean the surfaces with a mixture of 70% Isopropanol and 30% water.
- Wipe clean.

- Apply the primer to the tape surfaces on the side panel. Apply the tape on the side panel. Remove the protective paper from the tape.

- Fit the side panel on the car according to assembly instruction 30744180.

SILL DECOR (2008-2012)

SILL DECOR

PREPARATIONS

Fig. 96: Removing The Front And Rear Wheels
Courtesy of VOLVO CARS CORPORATION

- Remove the front and rear wheels on one side.

Fig. 97: Drilling Out Rivets
Courtesy of VOLVO CARS CORPORATION

- Drill out the pop rivet at the rear edge of the door sill panel and the rear pop rivet in the wing extender. Use a **6 mm (15/64")** drill bit.

- Remove any shavings and rivet residue.

Fig. 98: Removing The Clip
Courtesy of VOLVO CARS CORPORATION

- Carefully turn out the lower edge/rear edge of the front end of the wing extender.

NOTE: Do not turn excessively so that the tape at the front edge detaches.

- Remove the clip holding the rear end of the door sill panel.

Fig. 99: Drilling Out Rivets
Courtesy of VOLVO CARS CORPORATION

- Drill out the pop rivets at the front edge of the door sill panel and in the rear edge of the wing extender. Use a **6 mm (15/64")** drill bit.
- Remove any shavings and rivet residue.

Fig. 100: Cutting Off The Pin
Courtesy of VOLVO CARS CORPORATION

- Carefully turn out the lower edge/rear edge of the wing extender to make room to saw off the pin in the lower edge of the panel on the inside.

NOTE: Do not turn excessively so that the tape at the front edge detaches.

- Carefully cut off the pin on the panel. Use part of a hacksaw blade.

Fig. 101: Viewing Lower Edge Of The Door Sill Panel
Courtesy of VOLVO CARS CORPORATION

- Drill out the central pins in the clips at the lower edge of the door sill panel and remove them. Use a **4.5 mm (11/64")**

Fig. 102: Removing The Rubber Strip
Courtesy of VOLVO CARS CORPORATION

- Remove the rubber strip.

Fig. 103: Releasing The Clips
Courtesy of VOLVO CARS CORPORATION

- Insert a large flat-bladed screwdriver, press the bottom of the clips and pull off the door sill panel with the clips.

Fig. 104: Identifying Secured By A Clip
Courtesy of VOLVO CARS CORPORATION

- Detach the door sill panel's front end. It is secured by a clip.

Fig. 105: Removing The Panel
Courtesy of VOLVO CARS CORPORATION

- Remove the panel from the body. It will not be reused.

INSTALLATION

Fig. 106: Cutting Off The Mounting Eyelets
Courtesy of VOLVO CARS CORPORATION

- Take a new panel from the kit. Cut off the mounting eyelets on top of the upper sides.

Fig. 107: Installing A New Clip
Courtesy of VOLVO CARS CORPORATION

- Install a new clip.

Fig. 108: Installing New Clips
Courtesy of VOLVO CARS CORPORATION

- Install new clips.

Fig. 109: Installing Rubber Strip Onto The New Panel.
Courtesy of VOLVO CARS CORPORATION

- Press the rubber strip onto the new panel.

Fig. 110: Ensure All Clips Engage And Rubber Strip Correctly Positioned
Courtesy of VOLVO CARS CORPORATION

- Align the door sill panel ends under the wing extenders.
- Press the front section clips into place.
- Press the panel with the rubber strip along the body side. Ensure that all clips engage and that the rubber strip is correctly positioned.

Fig. 111: Press The Panel In The Lower Edge
Courtesy of VOLVO CARS CORPORATION

- Press the panel into place in the lower edge using new clips.

Fig. 112: Riveting The Panels
Courtesy of VOLVO CARS CORPORATION

- Pop rivet the panels into place.

Fig. 113: Riveting The Panels
Courtesy of VOLVO CARS CORPORATION

- Pop rivet the panels into place.

Fig. 114: Reinstall Front And Rear Wheels
Courtesy of VOLVO CARS CORPORATION

- Reinstall the front and rear wheels.
- Repeat all steps for the other side.

ACCESSORIES AND EQUIPMENT

Bumpers And Mudflaps - Removal, Replacement And Installation

BUMPER WITH MOUNTINGS AND DAMPING

CASING BUMPER FRONT, REPLACING

NOTE: **As the graphics in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the graphics is always correct.**

PREPARATIONS

Open and secure the hood.

REMOVING THE FRONT BUMPER CASING

Fig. 1: Identifying Clips And Side Panels
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 clips under the car (1 per side)
- the 2 side panels.

Detach the sides of the bumper by pulling it upwards at an angle and outwards.

Fig. 2: Identifying High-Pressure Cleaner And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the covers for the high-pressure cleaner (1)
- the covers for the screw mounting
- the 2 screws (2).

Fig. 3: Identifying Quick-Release Connector
Courtesy of VOLVO CARS CORPORATION

Pull the bumper straight out.

Release the quick-release connector (3) for the washer hose.

Fig. 4: Identifying Connectors For Fog Lamps
Courtesy of VOLVO CARS CORPORATION

Disconnect the connectors for the fog lamps (4).

Remove the bumper.

TRANSFERRING COMPONENTS

Fig. 5: Identifying High-Pressure Cleaner Screws And Clips
Courtesy of VOLVO CARS CORPORATION

Transfer:

- the 2 screws for the license plate
- the 4 screws (5) for the high-pressure cleaner
- the 2 clips (6) for the high-pressure cleaner
- the washer hose
- the rear section by releasing the 2 clips (7) and the 31 hooks
- the fog lamps. See **REMOVAL** and **INSTALLATION** .

Fig. 6: Identifying Engine Block Heater
Courtesy of VOLVO CARS CORPORATION

- the foam in the bumper
- the engine block heater (if applicable).

Fig. 7: Identifying Grilles
Courtesy of VOLVO CARS CORPORATION

- the 2 grilles.

INSTALLING THE FRONT BUMPER CASING

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the foam for the rear section
- the rear section on the casing.

Press the 31 hooks and 2 clips into place.

Install:

- the washer hose
- the high-pressure cleaner
- the 4 screws and 2 clips for the high-pressure cleaner
- the license plate.

Tighten the screws.

Install:

- the quick-release connector for the washer hose
- the 2 connectors for the fog lamp.

Connect the additional engine block heater (if applicable).

Secure the bumper and install the 2 screws loosely.

Press the hooks into place on both sides of the bumper.

HINT: Guide in the sides of the bumper from above.

Install:

- the 2 M8 screws. Tighten
- the 2 side panels
- the 2 clips under the car
- the 2 grilles
- the 2 covers for the high-pressure cleaner.

HINT: Pull out the washer nozzle using pliers and secure the cover. Carefully release the washer nozzle.

Check that the headlamp washer is working.

CASING BUMPER REAR, REPLACING

NOTE: **The graphics in this service information are used for different model years and / or models. Some variation may occur. However, the essential information in the graphics is always correct.**

PREPARATIONS

Fig. 8: Identifying Floor Hatch And Outer Side Floor
Courtesy of VOLVO CARS CORPORATION

Open the tailgate and floor hatch (1) and remove the outer side floor (2).

Fig. 9: Identifying Battery Cover And Mounting Bracket
Courtesy of VOLVO CARS CORPORATION

Remove the battery cover and mounting bracket.

REMOVING THE REAR BUMPER CASING

Fig. 10: Identifying Rivets
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 rivets under the car.

Fig. 11: Identifying Soundproofing Sections
Courtesy of VOLVO CARS CORPORATION

- the 4 soundproofing sections (1)
- the 4 nuts.

Fig. 12: Identifying Panels
Courtesy of VOLVO CARS CORPORATION

- the 2 panels.

Fig. 13: Identifying Hidden Clips
Courtesy of VOLVO CARS CORPORATION

Disconnect the 2 connectors for the sidemarker lamps.

Release the hidden clips (1), 1 on each side, at the bottom of the casing.

NOTE: Grasp with both hands and pull straight out.

Fig. 14: Identifying Hooks
Courtesy of VOLVO CARS CORPORATION

Continue upwards along the fender extensions and detach the 3 hooks on each side (2).

CAUTION: Do not only pull the painted panel. Pull the panel/bumper behind it as well.

Fig. 15: Identifying Hooks
Courtesy of VOLVO CARS CORPORATION

Then pull out the ends more until the hooks (3) release, 4 on each side.

Release the hooks (4), 2 on each side.

Lift off the bumper.

TRANSFERRING COMPONENTS

Fig. 16: Identifying Transferring Components
Courtesy of VOLVO CARS CORPORATION

Transfer:

- the 2 painted panels
- the 2 sidemarker/fog lamps
- the cover for the towing eyelet
- the 3 vertical support struts which are secured with 3 screws and 3 clips
- the 7 hooks for the rear section at the bottom edge.

HINT: Detach the top edge first.

Transfer the bumper padding which is secured at 3 points.

INSTALLING THE REAR BUMPER CASING

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the foam for the rear section

- the rear section on the bumper cover.

HINT: First press the upper edge of the rear section into place. Then guide the hooks on the bottom edge of the bumper casing into the rear section and press them into place.

Install:

- the bumper cover
- the 2 connectors
- the 4 M8 nuts. Tighten
- the 2 covers.

Press the sides of the bumper into place.

Install:

- the 2 rivets under the car
- the 4 pre-punched soundproofing sections
- the 1 M8 screw for the battery cover and the bracket. Tighten
- the outer side floor.

Fold down the floor hatch.

ACCESSORIES AND EQUIPMENT

Doors And Lids - Cleaning, Inspection And Adjustment

SUN ROOF

SUN ROOF MODULE (SRM), CALIBRATING

NOTE: **The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.**

CALIBRATION

CALIBRATING THE SUN ROOF MODULE (SRM)

Fig. 1: Identifying Sun Roof Switch
Courtesy of VOLVO CARS CORPORATION

The sun roof must be closed.

Ignition in position I.

1

Press the sun roof switch so that the sun roof is in the tilt position.

Release the switch.

2

Press the switch (in the tilt position) again for at least 5 seconds so that the sun roof flickers.

Release the switch.

The calibration is complete.

NOTE: If the sun roof has not moved to the correct position, carry out calibration again.

HINT: If the sun roof has still not moved to the correct position:

HINT: Press the sun roof switch so that the sun roof moves to the rearmost position (completely open).

HINT: Release the switch.

HINT: Press the switch (in the completely open position) in again for at least 5 seconds so that the sun roof flickers.

HINT: Release the switch.

HINT: Close the sun roof and carry out calibration again. See steps 1 and 2 above.

For further information on the sunroof, see **DESIGN** and **FUNCTION**

SUN ROOF, ADJUSTING

NOTE: As the graphics in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the graphics is always correct.

VERTICAL ADJUSTMENT

NOTE: For tightening torques, see TIGHTENING TORQUE .

Fig. 2: Identifying Sun Roof Height Adjustment
Courtesy of VOLVO CARS CORPORATION

Slacken off the screws. See **GLASS COVER** .

Lower the sun roof to its closed position.

Front edge:

The upper section of the molding must be flush with or one mm under the roof panel (dimension A).

Rear edge:

The upper section of the molding must be flush with or one mm above the roof panel (dimension A).

Install the 4 M5 screws. Tighten.

Calibrate the sun roof control module. See **SUN ROOF MODULE (SRM), CALIBRATING**.

Install the cargo compartment cover.

ADJUSTING SIDEWAYS AND FRONT-REAR

NOTE: For tightening torques, see TIGHTENING TORQUE .

Fig. 3: Identifying Sun Roof Bolts & Nuts
Courtesy of VOLVO CARS CORPORATION

Remove the headlining. See **HEADLINING, REPLACING** .

Slacken off the 8 M6 screws.

Move the sun roof unit so that the sun roof is under even pressure on all sides.

Check the function of the sun roof by opening and closing it as far as it will go.

NOTE: The screws must be tightened for the function check.

Calibrate the sun roof control module. See **SUN ROOF MODULE (SRM), CALIBRATING**.

Tighten the 8 M6 screws.

Install the headlining. See **HEADLINING, REPLACING** .

GLASS COVER

PREPARATIONS

Remove:

Carry out operation, see **APRON MOLDING**.

Fig. 4: Identifying Glass Sun Roof And Screws
Courtesy of VOLVO CARS CORPORATION

Remove two screws from each side.

Lift out the glass.

Replace the glass.

Install:

In reverse order.

NOTE: Check that the mechanism has not moved during the replacement.

APRON MOLDING

REPLACING APRON MOLDING

The sun roof in tilted position.

Fig. 5: Identifying Apron Molding Pulled Into Car

Pull the apron molding into the car.

Detach at front edge.

Unhook at the lower edge.

Remove the apron molding.

Install:

In reverse order.

SUN ROOF, LEAK TEST

Special tools:

see **1158957**

NOTE: As the graphics in this service information are used for different model years

and/or models, some variation may occur. However, the essential information in the graphics is always correct.

If any work that may effect the sun roof seals has been carried out, it must be checked.

Remove:

- the A-post panel. See **PANEL A-POST, REPLACING**
- the C-post panel. See **PANEL C-POST, REPLACING** .

Fig. 6: Sealing Drainage Hoses
Courtesy of VOLVO CARS CORPORATION

Seal the drainage hoses and pour water into the sun roof base plate.

The front hoses are between the A-post and the front edge of the sun roof. The best way to seal the hoses is by clamping them using special tool see **1158957** .

The rear hoses are inside the C-post panel. Seal the hoses by clamping them using special tool see **1158957** .

After work involving the removal of the drainage frame, carry out the following test:

1. Test both the gutters for leaks at the front and rear edges before installing them in the car
2. Install the sun roof base plate in the car and connect the drain hoses
3. Check that all seals are intact. Install other components so that the entire sun roof is complete
4. Seal the drains as above
5. Check for leaks
6. Remove the hose clip and sealant
7. Check that the drains function.

ACCESSORIES AND EQUIPMENT

Doors And Lids - Specifications, Mechanical

DOORS AND HATCHES, GENERAL (2003-12)

DOORS/HOOD/TAILGATE, ADJUSTMENT CHART

ADJUSTMENT DIMENSIONS

Below are the dimensions of the bodywork clearance measured during manufacture of the car. The dimensions are an average value of the dimensions of new cars.

Measurements are taken from painted bodywork. If the bodywork is not painted, the gap increases by approximately 0.2 mm.

NOTE: These dimensions vary from car to car. This list is only a guide from which to work.

No maximum or minimum dimensions are listed, account must be taken of the appearance of the gaps in relation to the surfaces.

NOTE: The final check/adjustment must be made when the car has been painted.

If an unpainted black front fender is installed on a white car, it will be very difficult to, see the size of the gap between the fender and the door.

LEVEL ADJUSTING (APPLIES WHEN ADJUSTING DOORS, FENDERS AND HATCHES)

Fig. 1: Identifying Level Adjustment
Courtesy of VOLVO CARS CORPORATION

The front component must overlap the rear component as shown, partly for safety reasons in the event of a collision and partly to reduce wind noise.

Dimension M1 = 0.5 mm

Fig. 2: Identifying Dimensions F1, F2, F3, F4
Courtesy of VOLVO CARS CORPORATION

F1 = 7.0 mm

F2 = 5.3 mm

F3 = 4.0 mm

F4 = 2.0 mm

Fig. 3: Identifying Dimensions F5, F6, F7
Courtesy of VOLVO CARS CORPORATION

F5 = 1.0 mm

F6 = 3.0 mm

F7 = 2.6 mm

Fig. 4: Identifying Dimensions S1, S2, S3, S4, S5, S6
Courtesy of VOLVO CARS CORPORATION

S1 = 4.6 mm

S2 = 4.5 mm

S3 = 4.6 mm

S4 = 4.9 mm

S5 = 4.5 mm

S6 = 4.0 mm

Fig. 5: Identifying Dimensions S7, S8, S9, S10, S11
Courtesy of VOLVO CARS CORPORATION

S7 = 4.5 mm

S8 = 4.5 mm

S9 = 4.8 mm

S10 = 4.8 mm

S11 = 4.8 mm

Fig. 6: Identifying Dimensions R1, R2, R3, R4
Courtesy of VOLVO CARS CORPORATION

R1 = 4.0 mm

R2 = 4.8 mm

R3 = 1.6 mm

R4 = 4.0 mm

Fig. 7: Identifying Dimensions R5, R6, R7
Courtesy of VOLVO CARS CORPORATION

R5 = 4.2 mm

R6 = 4.0 mm

R7 = 5.0 mm

GENINFO

Electrical system

GENINFO

JACKING POINTS, BODY FRAME

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

JACKING POINTS IN BODY FRAME

JACKING POINTS FOR LIFTING THE VEHICLE, OPTION A

Fig. 1: Identifying Vehicle Lift Points (Alternative A)
Courtesy of VOLVO CARS CORPORATION

The following jacking points must be used when lifting the vehicle. The jacking plate must have a rubber pad to prevent damage to the vehicle.

JACKING POINTS FOR LIFTING THE VEHICLE, OPTION B

Fig. 2: Identifying Vehicle Lift Points (Alternative B)
Courtesy of VOLVO CARS CORPORATION

The following jacking points must be used when lifting the vehicle. The jacking plate must have a rubber pad to prevent damage to the vehicle.

Front lift:

A wooden load relief plate (200*200*20 mm) must be used behind the sub-frame bracket.

Rear lift:

A wooden spacer (170*80*50 mm) must be used in front of the sub-frame bracket.

ENGINE

Engine - Removal, replacement and installation

CRANK MECHANISM (B6324S; 2007-2010)

CRANKSHAFT FRONT SEAL

Remove the right hand front wheel. See **INSTALLING WHEELS**

CYLINDER HEAD

Special tools	
	T9997300 WRENCH **Tool number:** T9997300 **Tool description:** WRENCH **Tool boards:**

Materials:	
Designation	**Part number**
Gasket solution	1161 440

Depressurize the fuel system. See **FUEL SYSTEM PRESSURE RELEASE**

Remove the following items:

- the exhaust manifold. See **EXHAUST MANIFOLD**
- induction pipe. See **INDUCTION PIPE**
- the valve cover. See **VALVE COVER**
- injectors and fuel rail. See **INJECTOR** .

Fig. 13: Keeping Components In Order Upon Removal
Courtesy of VOLVO CARS CORPORATION

NOTE: Note/mark the position of the components before removal.

Lift out the valve lifters. Use a magnet or suction cup.

Fig. 14: Identifying Throttle Valves
Courtesy of VOLVO CARS CORPORATION

Fig. 15: Identifying Cylinder Head Bolts
Courtesy of VOLVO CARS CORPORATION

CAUTION: Take extra care not to damage the mating faces.

CAUTION: Make sure that the mating faces are clean and free of foreign material.

CAUTION: Make sure that the cylinder head screw's threaded holes in the engine block are free of fluid.

Use: Gasket solution, 1161 440

Thoroughly blow clean the oil ducts in the cylinder head.

Fig. 16: Identifying Special Tool (9997300) For Left-Threaded Sleeves
Courtesy of VOLVO CARS CORPORATION

Check that the left-threaded sleeves are tightened to the bottom.

Cylinder screw sleeves. See **TIGHTENING TORQUE**

see **9997300**

Fig. 17: Identifying Torque Sequence
Courtesy of VOLVO CARS CORPORATION

CAUTION: Take extra care not to damage the mating faces.

Cylinder head. See **TIGHTENING TORQUE**

Fig. 18: Identifying Throttle Valves
Courtesy of VOLVO CARS CORPORATION

Make sure that the throttle valves (1) and (2) are in place.

Upon replacement of the cylinder head gasket along, reinstall the valve lifters in their original position.

Fig. 19: Locating Locating Pin
Courtesy of VOLVO CARS CORPORATION

When the cylinder head is replace, valve clearance must be checked. See **VALVE CLEARANCE CHECK, ADJUSTMENT** .

Install the following items:

- the valve cover. See **VALVE COVER**
- injectors and fuel rail. See **INJECTOR**
- the intake manifold, see **INDUCTION PIPE**
- the exhaust manifold, see **EXHAUST MANIFOLD** .

Replace the engine oil and oil filter. See **OIL FILTER** .

Check the engine oil and coolant levels.

Warm up the engine until the thermostat opens. Check the engine for leaks.

Top up the coolant if necessary. See **COOLING SYSTEM - DRAINING, CHARGING AND BLEEDING** .

VALVE COVER

Install gasket inner timing gear casing. See **GASKET, INNER TIMING COVER**.

CYLINDER HEAD (B6324S5; 2011-2012)

CYLINDER HEAD

see **CYLINDER HEAD**

VALVE COVER

see **VALVE COVER**

ENGINE/TRANSAXLE, REMOVING (B8444S)

ENGINE/TRANSAXLE, REMOVING

Special tools:

see **9997077**

see **9997298**

see **9995259**

see **9997062**

see **9997057**

see **9997076**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

PREPARATORY WORK

Remove:

- the battery negative lead. See: **BATTERY, DISCONNECTING** .
- the cover for the expansion vessel,

REMOVING PROTECTIVE PLATE

Fig. 40: Splash Guard. Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

NOTE: There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.

Remove the 6 screws.

Lift and slide the protective plate forward.

Remove the splash guard.

REMOVING THE LOWER ENGINE COVER

Fig. 41: Removing The Lower Engine Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the lower engine cover.

DRAINING COOLANT

Open the cock on the lower left edge of the radiator.

Drain the coolant into a clean container.

Close the cock.

REMOVING THE UPPER CROSS STAY

Fig. 42: Engine Stabilizer Brace
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 4 screws at the suspension turrets
- the screws of the upper engine mount on the engine
- the upper cross stay.

REMOVING THE AIR CLEANER COVER

Fig. 43: View of Engine Compartment
Courtesy of VOLVO CARS CORPORATION

Remove the air cleaner cover by pulling it straight up.

DISCONNECTING THE CONNECTOR

Fig. 44: Identifying 2 Connectors At The Engine Control Module (ECM)
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 connectors from the engine control module (ECM); clip the band clamp to the cable harness
- the connector from the mass air flow sensor.

REMOVAL OF AIR FILTER

Fig. 45: Identifying Air Horn
Courtesy of VOLVO CARS CORPORATION

Remove:

- the brake vacuum hose from the vacuum pump
- the 2 screws of the fresh air hose in the front plate
- the fresh air hose
- the air cleaner by pulling it straight up.

REMOVING COMPONENTS

Fig. 46: Identifying Lead, Cable and Connector
Courtesy of VOLVO CARS CORPORATION

Remove:

- the positive lead (1) from the electrical distribution box
- the ground cable (2) between the engine and body (loosen in the body).

Remove the connector:

- at the electrical distribution box (3)
- from the brake vacuum valve. Detach the vacuum hose from the valve that leads to the brake vacuum amplifier.

REMOVAL OF PARTS ON TRANSMISSION

Fig. 47: Identifying The Gear Selector Cable
Courtesy of VOLVO CARS CORPORATION

Remove:

- the gear selector cable using a jimmy bar see **9997077** to break the cable loose from its ball
- the transmission control module (TCM) connector.

REMOVING THE OIL COOLER HOSES

Fig. 48: Removing Transaxle Oil Cooler Lines
Courtesy of VOLVO CARS CORPORATION

CAUTION: Mark up the hoses.

Remove:

- the lower line of the transaxle oil cooler
- the upper line of the transaxle oil cooler.

NOTE: Seal the openings and collect the oil from the oil cooler in a receptacle. Do not reuse the drained oil.

DETACHING RADIATOR HOSES

Fig. 49: Identifying Front Section Of Terminal And Hose
Courtesy of VOLVO CARS CORPORATION

Detach the radiator hoses at the quick-release coupling toward the firewall.

REMOVING COOLANT HOSES

Fig. 50: Removing Coolant Hoses
Courtesy of VOLVO CARS CORPORATION

Remove:

- the upper radiator hose from the distributor housing
- the lower radiator hose from the thermostat housing.

REMOVING THE UPPER ENGINE COVERS

Remove the upper engine covers by pulling them straight up.

REMOVING THE COVER OVER THE SERVO PUMP

Remove:

- the 2 screws on the cover over the servo pump
- the cover.

REMOVING THE SERVO OIL RESERVOIR

Fig. 51: Removing The Servo Oil Reservoir
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw on the washer fluid filler pipe; bend out the pipe
- the return line for servo oil from the clips and clamps.

Lift up the servo oil reservoir.

Remove:

- the 2 coolant hoses from the expansion tank
- the 3 ground cables from the body at the expansion tank
- the connector from the electric cooling fan.

Position the oil reservoir on the engine.

NOTE: Make sure no oil runs out.

NOTE: Make sure that the oil return line is on the correct side of the upper coolant hose that runs to the engine.

REMOVING THE AUXILIARIES BELT

Remove the accessory drive belt. See **AUXILIARIES BELT/BELT TENSIONER, REPLACEMENT**.

REMOVING THE GROUND CABLE

Remove the ground cable screw between the engine and body. It is located beneath the expansion tank.

REMOVING FRONT ASSEMBLY COMPONENTS

Raise the vehicle.

Remove the front wheels.

REMOVING THE BALL JOINT FROM THE LINK ARM (ON BOTH SIDES OF THE VEHICLE)

Fig. 52: Locating Drive Shaft Nut And Lower Ball Joint Nut
Courtesy of VOLVO CARS CORPORATION

Remove:

- the drive shaft screw. Counterhold with a screwdriver in the brake disc cooling channels.
- the rubber sleeve in the wheel hub
- the nut between the ball joint and link arm
- the nut of the anti-roll bar link in the anti-roll bar.

NOTE: Counterhold with a Torx wrench so that the ball joint gaiters do not turn when the nuts are removed.

Fig. 53: Identifying Steering Arm Track Rod End

Courtesy of VOLVO CARS CORPORATION

Mark the position of the track rod.

Remove the track rod end from the guide arm. Use puller: see **9995259** .

Fig. 54: Disconnecting Ball Joint Pinion From Control Arm Using 999 7062
Courtesy of VOLVO CARS CORPORATION

Loosen the ball joint pin from the link arm. Use: see **9997062** .

Fit the cap nut, 7062-1, on the ball joint pin.

Tighten the nut toward the link arm. Then turn it back one rotation to create play between the cap nut and the link arm. Position the puller on the link arm and detach the ball joint from the link arm.

REMOVING THE EXHAUST PIPE

Fig. 55: Identifying Intermediate Pipes
Courtesy of VOLVO CARS CORPORATION

Remove:

- the nuts at intermediate pipe joints
- the intermediate pipes; scrap the gaskets.

REMOVING THE SCREWS FROM THE FRONT PROPELLER SHAFT

Fig. 56: Drive Flange Front Joint
Courtesy of VOLVO CARS CORPORATION

CAUTION: Mark the position of the flange against the propeller shaft.

Remove the propeller shaft screws. Use: see **9997057** .

REMOVING THE LOWER STEERING SHAFT JOINT

Fig. 57: Identifying Lower Steering Shaft Joint
Courtesy of VOLVO CARS CORPORATION

CAUTION: Do not move the steering wheel. The contact reel in the SRS (supplemental restraint system) could be damaged.

Set the front wheels in the straight-ahead position.

Fold the floor carpet out of the way.

Bend up the outer section of the steering shaft boot.

Remove the retaining clip around the boot.

Pull the boot up.

Turn the steering wheel to gain the best possible access to the steering shaft nut.

Remove the ignition key and activate the steering wheel lock.

Remove:

- the screw securing the mounting for the steering shaft in the joint

- the joint from the steering shaft by pressing the shaft upwards.

REMOVING THE STEERING GEAR CONNECTOR

Fig. 58: Locating Steering Gear Connector (Blue)
Courtesy of VOLVO CARS CORPORATION

Detach the connector (blue) from the steering gear.

DRAINING THE FUEL LINE

Fig. 59: Installing Fuel Lines
Courtesy of VOLVO CARS CORPORATION

Drain the fuel line. See **FUEL SYSTEM, DRAINING** .

Detach the quick-release coupling of the fuel line at the right rear sub-frame mount. see **9997298** for the pressure line.

Detach the fuel return line.

NOTE: Seal the openings against dirt.

REMOVAL OF A/C COMPRESSOR

Detach the connector from:

- the A/C compressor (x2)

Pull out the cable harness and bend it aside.

LOWERING THE ENGINE/TRANSMISSION UNIT

Fig. 60: Secured Lifting Table Under The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that the lifting table is properly centred under the engine.

Position a lifting table under the sub-frame. Secure the table against the sub-frame.

LOWERING THE ENGINE/TRANSMISSION UNIT

Fig. 61: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the connector from the circulation pump.
- the 4 M10 screws in the rear edge of the sub-frame brackets
- the 4 screws in the sub-frame. Lower the engine/transmission unit approx. 15 cm so that the drive shafts create a horizontal line between the hub and the transmission.

NOTE: Take great care that no hoses, wiring or anything else catches in the engine / gearbox unit when it is lowered.

Tap the control arms off of the ball joint pin. Use see **9997076** . Release the drive shafts from the wheel hubs by pressing the drive shafts into the hub.

Fig. 62: Remove The 3 A/C Compressor Screws.
Courtesy of VOLVO CARS CORPORATION

Remove the 3 A/C compressor screws.

Bend out the A/C compressor and suspend it in a suitable manner.

Continue lowering the engine/transmission unit.

ENGINE/TRANSMISSION, INSTALLING

Special tools:

see **9512050**

see **9512957**

see **9512953**

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

RAISING THE ENGINE/TRANSMISSION UNIT

Fig. 63: Secured Lifting Table Under The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that no hoses, wiring or other components catch or become trapped during lifting.

NOTE: Make sure that the contact faces on the ball joints and link arms are clean.

Raise the engine/transmission unit using a lifting table. Stop approx. 15 cm before the sub-frame reaches the frame members.

INSTALLING THE A/C COMPRESSOR

Install:

- the lower radiator hose in the mount on the sub-frame
- the A/C compressor; tighten 3 screws

Attach the connectors to:

- the A/C compressor
- the oil pressure sensor
- the oil level sensor; secure the cable harness in the clips and clamps.

Install the drive shaft in the hub on both sides.

Continue raising the engine to approx. 50 mm before it makes contact.

CAUTION: Guide the lower steering shaft into the hole in the firewall.

Guide the ball joint to the link arm.

INSTALLING THE SUB-FRAME

Fig. 64: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Raise the sub-frame toward the frame members until it makes contact.

Install the sub-frame's four screws together with the sub-frame's brackets and engine heater, if installed.

Use new screws. Lube the screws with oil.

Tighten acc. to: **TIGHTENING TORQUE** . First tighten the screws on the sub-frame's left side, then on the right.

Use: see **9512050** .

Tighten the screws for the brackets M10.

Remove the lifting table.

INSTALLING COMPONENTS IN THE FRONT ASSEMBLY

Fig. 65: Ball Joints Nuts
Courtesy of VOLVO CARS CORPORATION

Tighten the ball joint and link arm. See **TIGHTENING TORQUE** .

Counterhold with Torx 40 so that the ball joint gaiter does not rotate.

Install:

- the anti-roll bar links. Use new lock nuts. Tighten as specified: **TIGHTENING TORQUE** .
- new center screws and a rubber sleeve on the drive shafts. Tighten as specified: **TIGHTENING TORQUE** .

INSTALLING TRACK RODS

Fig. 66: Identifying Length Of Track Rod In Relation To Steering Gear Housing
Courtesy of VOLVO CARS CORPORATION

Install the track rods following the marks made during removal. Use new lock nuts. Tighten as specified: **TIGHTENING TORQUE** .

INSTALLING FUEL LINES

Fig. 67: Installing Fuel Lines
Courtesy of VOLVO CARS CORPORATION

NOTE: Remove the seals.

Connect the fuel lines.

ATTACHING THE STEERING GEAR CONNECTOR

Fig. 68: Locating Steering Gear Connector (Blue)
Courtesy of VOLVO CARS CORPORATION

Attach the connector to the steering gear.

INSTALLING THE PROPELLER SHAFT

Install the anti-roll bar. See: **PROPELLER SHAFT, REPLACING** .

INSTALLING EXHAUST AND INTERMEDIATE PIPES

Fig. 69: Identifying Intermediate Pipes
Courtesy of VOLVO CARS CORPORATION

Install:

- the intermediate pipes using new gaskets
- the nuts at intermediate pipe joints.

INSTALLING COMPONENTS ON THE TRANSMISSION

Fig. 70: Identifying The Gear Selector Cable
Courtesy of VOLVO CARS CORPORATION

Install:

- the gear selector cable in the mount on the transmission and press the cable into the ball
- the transmission control module (TCM) connector.

INSTALLING THE RADIATOR HOSES

Fig. 71: Removing Coolant Hoses
Courtesy of VOLVO CARS CORPORATION

Install:

- the upper radiator hose on the distributor housing; tighten the clamp
- the lower radiator hose on the thermostat housing; tighten the clamp.

Connect the radiator hoses at the firewall.

INSTALLING THE OIL COOLER HOSES

Fig. 72: Removing Transaxle Oil Cooler Lines
Courtesy of VOLVO CARS CORPORATION

Remove the seals.

Install:

- the lower line to the transmission oil cooler as marked; secure with a quick-acting lock
- the upper line to the transmission oil cooler as marked; secure with a quick-acting lock.

INSTALLING COMPONENTS

Fig. 73: Identifying Lead, Cable and Connector
Courtesy of VOLVO CARS CORPORATION

Install:

- the positive lead (1) in the electrical distribution box
- the ground cable (2) in the body (between the engine and body)
- the connector at the electrical distribution box (3)

- the connector to the brake vacuum valve and the vacuum hose on the valve leading to the brake vacuum amplifier.

INSTALLING THE AIR CLEANER (ACL)

Fig. 74: Identifying 2 Connectors At The Engine Control Module (ECM)
Courtesy of VOLVO CARS CORPORATION

Install:

- the air cleaner; tighten the hose clip on the mass air flow sensor
- the brake vacuum hose on the brake pump
- the fresh air hose
- the 2 screws of the fresh air hose in the front plate
- the 2 connectors to the engine control module (ECM)
- the connector to the mass air flow sensor
- the band clamp on the cable harness in the air cleaner housing
- the cover over the air cleaner.

INSTALLING THE AUXILIARIES BELT

Install the accessory drive belt. See **AUXILIARIES BELT/BELT TENSIONER, REPLACEMENT**.

INSTALLING THE GROUND CABLE

Install:

- the ground cable between the engine and body, located beneath the expansion tank
- the screw; tighten.

INSTALLING THE SERVO OIL RESERVOIR

Fig. 75: Removing The Servo Oil Reservoir
Courtesy of VOLVO CARS CORPORATION

Install:

- the servo oil reservoir
- the return line for servo oil in the clips and clamps
- the screw on the washer fluid filler pipe; tighten
- the 3 ground cables in the body at the expansion tank
- the 3 screws; tighten
- the 2 coolant hoses to the expansion tank; tighten the clamps
- the connector to the electric cooling fan.

INSTALLING THE COVER OVER THE SERVO PUMP

Install:

- the cover over the servo pump
- the 2 screws; tighten

INSTALLING THE UPPER ENGINE COVERS

Position the upper engine covers and press them into the retainers.

INSTALLING THE UPPER CROSS STAY

Fig. 76: Engine Stabilizer Brace
Courtesy of VOLVO CARS CORPORATION

Install:

- the upper cross stay between the suspension turrets
- the 4 screws in the suspension turrets; tighten
- the screw of the cross stay mount on the upper engine mount; tighten.

INSTALLING THE LOWER ENGINE COVER

Fig. 77: Removing The Lower Engine Cover
Courtesy of VOLVO CARS CORPORATION

Install:

- the lower engine cover
- the 6 screws; tighten.

INSTALLING THE PROTECTIVE PLATE

Fig. 78: Splash Guard. Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Install:

- the protective plate
- the 6 screws; tighten.

INSTALLING WHEELS

Install the front wheels. See: **INSTALLING WHEELS** .

INSTALLING THE BATTERY CABLE

Fit the battery's negative cable in accordance with: **BATTERY, DISCONNECTING** .

CHECK

CAUTION: Make sure the outlet hose of filling equipment is not blocked as this could damage the cooling system.

Fill with coolant using filling equipment: see **9512957** and cover: see **9512953** .

Check the oil level in the engine and transmission. Start the engine and allow it to warm to normal operating temperature. Check for leaks and proper function. Fill up fluids as necessary.

Fig. 79: Identifying Lift Table
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that no components catch when lifting the engine.

Use: Lift table.

Make sure that the mating surfaces on the ball joints and control arms are clean.

Raise the engine/transmission unit. Stop the lift approx. 15 cm before the subframe reaches the frame members.

Install (on both sides) the drive shaft to the hub.

Continue raising the engine until it is only approx. 50 mm before it makes contact.

Guide the lower steering shaft into the hole in the firewall.

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

PREPARATORY WORK

Remove the front wheels on both sides.

INSTALLING THE LIFTING TOOL

Fig. 150: Installing The Lifting Tool 9995716 and Adapters 9995460
Courtesy of VOLVO CARS CORPORATION

the lifting tool: see **9995716** and lifting hooks: see **9995460** . Lift up the engine slightly so that the engine pads are unloaded.

REMOVING THE WING LINER

Fig. 151: Identifying Plastic Nuts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the plastic nuts, x2
- the wing liner.

Remove the right engine pad. See:**ENGINE SUPPORT INSULATOR, RIGHT**

REMOVING THE PROTECTIVE PLATE

Fig. 152: Splash Guard. Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 153: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

NOTE: There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.

Raise and move the protective plate forward. Remove the protective plate.

REMOVING THE PROTECTIVE COVER UNDER THE ENGINE

Fig. 154: Removing The Lower Engine Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the protective cover under the engine.

REMOVING THE GEARBOX BOLTS TO THE LOWER TORQUE ROD

Fig. 155: Identifying Bolts To The Lower Torque Rod
Courtesy of VOLVO CARS CORPORATION

REMOVING THE LOWER BOLT TO THE FRONT ENGINE PAD

Fig. 156: Lower Front Engine Pad Bolt
Courtesy of VOLVO CARS CORPORATION

Remove the lower bolt to the engine pad.

REMOVING THE ANTI-ROLL BAR LINK FROM THE ANTI-ROLL BAR ON BOTH SIDES

Remove the anti-roll bar. See:**ANTI-ROLL BAR LINK FRONT, REPLACING**

REMOVING THE DRIVE SHAFT

Fig. 157: Identifying Drive Shaft Screw Removal Using A Screwdriver As A Counter Hold On Brake Disc
Courtesy of VOLVO CARS CORPORATION

Remove the bolt for the drive shaft. Use a screwdriver in the brake disc as counterhold. Tap the drive shaft into the hub slightly. Use a brass drift.

REMOVING THE LINK ARM FROM THE WHEEL SPINDLE ON BOTH SIDES

Remove the ball joint according to **BALL JOINT, REPLACING**

REMOVING THE STEERING GEAR FROM THE SUBFRAME

Fig. 158: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the nuts, x4
- the bolt, x1.

REMOVING THE SUBFRAME

Fig. 159: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that no pipes or cables are under load or are trapped when lowering the sub-frame.

Release:

- the 2 x heated oxygen sensor (HO2S) connectors from the rear edge of the subframe
- the heated oxygen sensor (HO2S) connector from the front edge of the subframe.

Remove the bolt to the ground cable bracket on the front edge of the subframe.

Position a lifting table under the subframe.

Remove:

- the bolts to the subframe's brackets at the rear edge
- the bolts to the subframe in the front and rear edge
- the subframe's brackets.

Release the heated oxygen sensor (HO2S) cables from the anti-roll bar.

Remove the lower coolant hose from the bracket on the subframe.

Lower the subframe carefully. Release the oil pipes to the steering gear from the clips on the subframe.

Remove the bolt to the bracket holding the pressure pipe to the steering gear on the subframe.

TRANSFERRING THE COMPONENTS

Fig. 160: Identifying Front And Rear Screws To Control Arms
Courtesy of VOLVO CARS CORPORATION

Transfer the link arms on both sides.

Install:

- the 2 x front screws to the control arms. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the rear screw to the control arms. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Transfer the anti-roll bar. Fit the bolts to the anti-roll bar, M10 x4.

Transfer the right-hand engine pad.

Fit the bolts to the engine pad, x2, in accordance with: **TIGHTENING TORQUE** .

Install a new lower torque rod with the nuts. See **TIGHTENING TORQUE** .

Install new pipe/hose holder. Transfer the bracket to the lower coolant hose. Install an M6 screw in the bracket.

INSTALLATION

INSTALLING THE SUBFRAME

CAUTION: Ensure that no pipes or cables are loaded or trapped when raising the sub-frame.

Raise the subframe.

Install:

- the oil pipes to the steering gear in the clips on the subframe
- the bolt, M6, to the bracket holding the pressure pipe to the steering gear on the subframe
- the lower coolant hose in the bracket on the sub-frame.

See instructions about adjustment. See : **SUBFRAME, ADJUSTING**

Install the sub-frame's four screws together with the sub-frame's brackets and engine heater, if installed.

Use new screws. Lube the screws with oil.

Tighten. See : **TIGHTENING TORQUE** . First tighten the screws on the sub-frame's left side, then on the right.

Tighten the screws for the brackets M10.

Install the heated oxygen sensor's cables on the anti-roll bar.

Remove the lifting table.

Install:

- the 2 x heated oxygen sensor (HO2S) connectors on the rear edge of the subframe
- the heated oxygen sensor (HO2S) connector on the front edge of the subframe
- the M6 screw to the ground cable mounting on the front edge of the subframe.

INSTALLING THE STEERING GEAR ON THE SUBFRAME

Install:

- the nuts, M10 x4.
- the M10 screw.

FITTING THE LOWER BOLT TO THE FRONT ENGINE PAD

Install the lower M10 screw for the engine pad.

INSTALLING THE GEARBOX BOLTS TO THE LOWER TORQUE ROD

Fit the bolts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

NOTE: To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .

Install:

- both exhaust pipes
- both exhaust pipes' nuts, M8.

INSTALLING THE LINK ARM ON BOTH SIDES

Install:

- the link arm. see **9997076** .
- the nut. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Counterhold using a Torx wrench to prevent damaging the ball joint boot.

INSTALLING THE ANTI-ROLL BAR LINK ON BOTH SIDES

Install:

- the anti-roll bar link
- the nut. Tighten acc. to: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Use socket see **9995500** and a Torx wrench as a counterhold to prevent damaging the rubber gaiter.

INSTALLING THE DRIVE SHAFT

Fit the bolt on both sides in accordance with: **TIGHTENING TORQUE** .

Use a screwdriver as counterhold.

INSTALLING THE PROTECTIVE COVER UNDER THE ENGINE

Install:

- the protective cover under the engine
- the bolts, M8 x6.

INSTALLING THE PROTECTIVE PLATE

Move the skid plate up into the bumper cover. Press forward until the mounting brackets enter the sub-frame. Install the screws.

FITTING THE BOLTS TO THE RIGHT-HAND ENGINE PAD

Fit the bolts, x2. Tighten in accordance with: **TIGHTENING TORQUE** .

INSTALLING THE WING LINER

Install:

- the wing liner
- the plastic nuts, x2.

REMOVING THE LIFTING TOOL

Remove the lifting tool see **9995716** , kit: see **9997070** and lifting hooks: see **9995460** .

FITTING THE BOLTS TO THE TORQUE ROD

Install the 2 x M10 screws, by the suspension turret on both sides.

FINISHING

Fit the front wheels on both sides in accordance with: **INSTALLING WHEELS** .

Remove the oil filler cap.

Install:

- the upper front engine casing
- the oil filler cap. Carry out wheel alignment in accordance with: **WHEEL ALIGNMENT, CHECKING / ADJUSTING** .

NOTE: **If the entire subframe has been removed for exposing other units/components, do not perform wheel alignment after installing the subframe.**

UPPER TORQUE ROD

NOTE: Removal steps in this procedure may contain installation details.

Fig. 161: Locating Upper Torque Rod
Courtesy of VOLVO CARS CORPORATION

Torque: M12

80 Nm

To install, reverse the removal procedure

Install the following items:

- engine cooling fan (fc) see **ENGINE COOLING FAN (FC), REPLACING**
- catalytic converter, see **THREE-WAY CATALYTIC CONVERTER (TWC), REPLACING**
- lower torque rod, see **TORQUE ROD, LOWER, REPLACEMENT**
- engine support insulator, right, see **ENGINE PAD, RIGHT, REPLACEMENT**
- oil filter

OIL SUMP (B5254T2; 2003-2007)

OIL SUMP REPLACEMENT

Special tools:

see **9512767**

PREPARATION

Fig. 208: Identifying Fuel Line Bracket And Screw
Courtesy of VOLVO CARS CORPORATION

Remove

- the oil dipstick and its pipe.
- the splashguard under the engine.

Drain the engine oil and remove the oil filter.

Release the oil cooler from the sump. Hang up at the rear.

Remove the screw from the bracket for the fuel line.

REMOVING THE OIL SUMP

Slacken off all screws holding the oil sump.

Remove all screw except for four. It is recommended that the four screws in the corners of the sump are left in place.

Carefully tap the sump with a rubber mallet until the joint and its liquid gasket releases.

Remove the four remaining screws.

Remove the sump.

CLEANING

Clean the gasket surfaces on the oil sump and cylinder block. Use a razor blade or a gasket scraper and gasket solvent P/N 1161 440.

WARNING: Use a fume hood or extractor when using gasket solvent.

INSTALLING THE OIL PAN

Fig. 209: Applying Liquid Gasket To Oil Pan
Courtesy of VOLVO CARS CORPORATION

Apply liquid gasket 1161 059-9 to the sump. Use roller see **9512767** .

Install

- new O-rings.
- the oil sump. Secure it loosely with a few screws.
- the remaining screws loosely.

Fig. 210: Identifying Oil Pan Tightening Sequence
Courtesy of VOLVO CARS CORPORATION

Press the sump against the transmission. Tighten the screws (1), (2), (3) and (4) to **3 Nm** . First tighten the screws (5) to **25 Nm** . Then tighten to **48 Nm** .

Tighten all screws in the sump joint to 17 Nm. Start at the transmission and continue forwards in pairs.

Install the screw for the bracket for the fuel line.

Connect the oil cooler to the sump. Use new O-rings. Reinstall the pipe on the sub-frame.

Install

- a new oil filter.
- the oil plug with a new gasket.
- the oil dipstick and its pipe. Use a new O-ring.

NOTE: Check that the O-ring is correctly positioned.

Fill with engine oil. Run the engine to operating temperature.

Check for oil leaks from the oil sump or oil cooler.

Install the splashguard under the engine.

Check the oil level. Top up if required.

OIL SUMP (B6294T; 2003-2006)

REPLACING THE OIL PAN

Special tools:

see **9511205**

see **9995460**

see **9995716**

see **9995717**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Remove the oil dipstick and pipe.

Turbocharged engines only

Remove:

- the connector and hose from the crankcase ventilation terminal in the plastic intake pipe
- the hose from the plastic charge air pipe
- the screws for the charge air pipe in the intake pipe.

Remove:

- the hose clamps from the plastic pipe at the rear of the engine
- the plastic pipes. If necessary, heat carefully using a hot air gun. Leave the pipes lying on the spark plug cover.

INSTALLING THE LIFTING FIXTURE

Fig. 211: Identifying Special Tool 999 5717 (Lifting Lug) And Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the cover over the ignition coils
- the 2 screws at the engine mounting.

Install fixture see **9995717** .

INSTALLING THE LIFTING BEAM AND LIFTING HOOK ON THE ENGINE LIFTING EYELET

Fig. 212: 999 5716 And Lifting Hooks 999 5460 Installed
Courtesy of VOLVO CARS CORPORATION

NOTE: Position the stand for lifting beam see 9995716 on the upper wheel arch members.

Then position the lifting beam directly above the engine lifting eyes on both sides.

Connect to the hole nearest the firewall. Connect lifting hook see **9995460** .

Tighten to light contact.

DRAINING THE ENGINE OIL

Remove:

- the lower engine cover
- the front air baffle.

Drain the engine oil. Remove the oil filter.

REMOVING COMPONENTS

Fig. 213: Removing Screw And Nuts For Steering Gear
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front wheel
- the nuts for the lower ball joints
- the anti-roll bar links from the anti-roll bar
- the center screw for the right-hand drive shaft
- the screw and nuts for the steering gear
- the screw for the front engine mounting
- the torque rod including the mounting in the sub-frame.

REMOVING THE SPINDLES

Fig. 214: Identifying Drive Shaft Installation
Courtesy of VOLVO CARS CORPORATION

Tension the trailing arms together to release the spindles. Use a retaining strap.

Unhook the right drive shaft from the wheel spindle. Tension the spring strut backwards. Use a retaining strap.

REMOVING COMPONENTS FROM THE SUB-FRAME

Fig. 215: Identifying Oil Pipe And Clamps For Steering Gear
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the cable duct.

Remove:

- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the hose for the EVAP canister in the clips on the upper side of the sub-frame
- any fuel line for the engine block heater and any engine block heater if mounted on the left hand side of the sub-frame
- the air duct from the clip
- the screw for the ground cable bracket
- the connectors for the heated oxygen sensors (HO2S) in the clips at the rear of the sub-frame.

LOWERING SUB-FRAME

Fig. 216: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Slacken off the subframe screws. Lower the sub-frame slightly.

Remove the heated oxygen sensor (HO2S) bracket on the reverse of the sub-frame.

Unscrew the screws for the sub-frame approximately 2.5 cm on the right-hand side.

Fully remove the screws on the left-hand side.

Angle the sub-frame down on the left-hand side.

Ensure that the screws for the steering gear release from the frame.

DISCONNECTING THE OIL COOLER

Disconnect the oil cooler from the sump. Hang the oil cooler from a suitable place.

REMOVING THE OIL PAN

Fig. 217: Identifying Fuel Line Bracket And Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw from the bracket for the fuel line.

Remove the screw for the bracket for the fuel line on the auxiliaries bracket.

Slacken off all the screws holding the oil pan.

Remove all but four screws. It is recommended that the four screws in the corners of the pan are left in place.

Carefully tap the pan using a rubber mallet until the joint and its liquid gasket releases.

Remove:

- the four remaining screws
- the oil sump.

CLEANING

Clean the gasket surfaces on the oil pan and cylinder block. Use a razor blade or a gasket scraper and gasket solvent **116 1440** .

WARNING: **Use a fume hood or extractor when using gasket solvent.**

NOTE: Also clean the gasket faces for the screws for the torque rod.

INSTALLING THE OIL PAN

Fig. 218: Applying Liquid Gasket To Oil Pan
Courtesy of VOLVO CARS CORPORATION

Apply liquid gasket **116 1059-9** to the sump. Use roller see **9511205** .

NOTE: Also apply liquid gasket around the holes for the screws for the torque rod.

Fig. 219: Applying Liquid Gasket To Oil Pan
Courtesy of VOLVO CARS CORPORATION

Install

- new O-rings
- the oil sump. Secure the oil sump loosely using a few screws
- the remaining screws loosely.

Fig. 220: Oil Pan Screw Tightening Sequence
Courtesy of VOLVO CARS CORPORATION

Press the oil pan against the transmission. Tighten the screws (1), (2), (3) and (4). Tighten to **3 Nm** .

Tighten the screws (5). First tighten to **25 Nm** . Then tighten to **48 Nm** .

Tighten all screws in the oil pan joint. Tighten to **17 Nm** . Start at the transmission and continue forwards in pairs.

Connect the oil cooler to the sump. Use new O-rings.

Install the screw for the bracket for the fuel line.

Install:

- a new oil filter
- the oil plug with a new gasket.

INSTALLING THE SUB-FRAME

Fig. 221: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Lift the sub-frame. Use a mobile jack.

Install:

- the bracket for the heated oxygen sensors (HO2S) in the rear edge of the sub-frame
- new screw in the sub-frame. Lubricate the screws
- the washers at the front edge and the support plates at the rear edge of the sub-frame.

Tighten the screws for the sub-frame. Tighten to **105 Nm** .

Angle-tighten **120°** . Use bevel protractor see **9512050** .

Start on the left hand side of the sub-frame. Continue with the right hand side.

Tighten the screws for the brackets at the rear of the sub-frame. Tighten to **50 Nm** .

INSTALLING COMPONENTS ON THE SUB-FRAME

Fig. 222: Identifying Oil Pipe And Clamps For Steering Gear
Courtesy of VOLVO CARS CORPORATION

Install:

- the screw for the cable and air duct
- the oil pipe for the steering gear in the snap fasteners along the sub-frame
- the hose for the EVAP canister in the clip on the upperside of the sub-frame
- the engine block heater and the fuel line to the engine block heater if applicable
- the air duct in the clips
- the screw for the ground cable bracket
- the connectors for the heated oxygen sensors (HO2S) in the clips at the rear of the sub-frame.

REMOVING RETAINING STRAPS

Fig. 223: Identifying Drive Shaft Installation
Courtesy of VOLVO CARS CORPORATION

Slacken off the retaining straps for the spring strut. Thread the drive shaft into the wheel spindle.

Carefully release the retaining strap for trailing arms. At the same time guide the lower ball joints into the trailing arms.

INSTALLING COMPONENTS

Fig. 224: Installing Anti-Roll Bar Links
Courtesy of VOLVO CARS CORPORATION

Install new nuts on the ball joints. Tighten to **80 Nm** .

Counterhold using a Torx wrench so that the ball joint boot is not damaged.

Install the anti-roll bar links. Use new nuts. Tighten to **50 Nm** .

Counterhold using a Torx wrench so that the boot is not damaged.

Install:

- the screw and nuts for the steering gear. Use new nuts and new screws. Tighten to **50 Nm**
- the front engine pad. Tighten to **50 Nm**

- the torque rod. Tighten the screws through the oil pan. Tighten to **50 Nm** . Tighten the nuts in the sub-frame. Tighten to **65 Nm**
- the center screw for the drive shaft. Use a new screw. Counterhold using a screwdriver in the brake disc vents. Tighten to **50 Nm**
- the front air baffle
- the front wheel.

REMOVING THE LIFTING BEAM AND THE LIFTING HOOK

Fig. 225: 999 5716 And Lifting Hooks 999 5460 Installed
Courtesy of VOLVO CARS CORPORATION

Remove:

- the lifting beam
- the lifting hooks
- the lifting fixture from the engine. Install the screws in the engine mounting.

FINISHING

Install:

- the cover over the ignition coils
- the oil dipstick and pipe. Use a new O-ring. Check that the O-ring is correctly positioned.

Turbocharged engines only

Install:

- the plastic pipes. Tighten the hose clamps
- the screws for the charge air pipe in the intake pipe
- the connector and hose to the crankcase ventilation terminal in the plastic intake pipe
- the hose to the plastic charge air pipe.

Filling with engine oil

Fill with **6.7 liters** of new engine oil.

CHECK

Start the engine and check for oil leakage.

Stop the engine. Give the oil time to run down into the oil pan. Then check the oil level.

Top up if necessary but do not overfill.

Wipe the engine compartment clean.

Install the lower engine cover.

TIMING GEAR (B6324S; 2007-2010)

AUXILIARY BELT

NOTE: Removal steps in this procedure may contain installation details.

Remove the battery. See **BATTERY, DISCONNECTING** .

Fig. 226: Identifying Cover Removal
Courtesy of VOLVO CARS CORPORATION

Fig. 227: Removing Air Intake and Electrical Center Cover
Courtesy of VOLVO CARS CORPORATION

Fig. 228: Identifying Battery Leads
Courtesy of VOLVO CARS CORPORATION

Fig. 229: Locating Air Tube Clamps
Courtesy of VOLVO CARS CORPORATION

Fig. 230: Identifying Air Filter Housing

Fig. 231: Identifying Reservoir Bracket and Nuts
Courtesy of VOLVO CARS CORPORATION

M6. See **TIGHTENING TORQUE**

Fig. 232: Locking The Tensioner In Position
Courtesy of VOLVO CARS CORPORATION

, slacken the tensioner and relieve the tension on the belt.

and lock the tensioner in position.

When installing, check the belt's position on all belt grooves.

Fig. 233: Locating Brace
Courtesy of VOLVO CARS CORPORATION

M8. See **TIGHTENING TORQUE**

M10. See **TIGHTENING TORQUE**

Fig. 234: Identifying Power Steering Pump/Water Pump Coupling
Courtesy of VOLVO CARS CORPORATION

1. the power steering pump bracket in the transmission. M8. See **TIGHTENING TORQUE**
2. the power steering pump's rear stay. M8. See **TIGHTENING TORQUE**
3. the water pump coupling/pulley. M5. See **TIGHTENING TORQUE**
4. Delivery line to power steering pump. See **TIGHTENING TORQUE**

Fig. 235: Identifying Water Pump Coupling/Pulley.
Courtesy of VOLVO CARS CORPORATION

When removing

Remove the pins from the pulley. Rotate the power steering pump upward and rearward.

When installing

To facilitate fitting of the water pump coupling in the power steering pump pulley, turn the coupling until the spikes are in the 8 o'clock and 2 o'clock position as illustrated. Make sure that the pins stick out through the holes in the pulley.

Fig. 236: Locating Water Pump Coupling/Pulley
Courtesy of VOLVO CARS CORPORATION

When installing

Make sure that the coupling's spring (2) clicks in position at the bonded part of the water pump (1) and that the pins (3) enter the holes of the pulley.

Always use new centering pins (4).

TIMING GEAR (B5254T2; 2003-2004)

AUXILIARIES BELT / BELT TENSIONER, REPLACING

NOTE: **Since the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE AUXILIARIES BELT

Fig. 370: Identifying Belt And Special Tool 999 7109
Courtesy of VOLVO CARS CORPORATION

Relieve the belt. see **9997109**

Remove the belt

REPLACING THE BELT TENSIONER

Fig. 371: Belt Tensioner And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- both mounting screws from the auxiliaries belt bracket for the belt tensioner
- the belt tensioner. Install the new belt tensioner. Tighten.

INSTALLATION

NOTE: For tightening torques, see TIGHTENING TORQUE .

INSTALLING THE AUXILIARIES BELT

Fig. 372: Identifying Belt And Special Tool 999 7109
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the belt is correctly seated in all the grooves on each pulley.

Turn the belt tensioner clockwise as much as possible.

see **9997109**

Fit the belt.

CHECKING WORK

Start the engine.

Check the rotation of the belt and the function of the belt tensioner.

CAMSHAFT SEAL/VARIABLE VALVE TIMING (VVT) UNIT, REPLACING

Special tools:

see **9995452**

see **9995651**

see **9995719**

see **9995718**

see **9995474**

see **9995451**

see **9995919**

see **9995450**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information is always correct.**

REMOVAL

CAUTION: There are a number of versions of the variable valve timing unit. Therefore it is extremely important to always read the information referring to the engine variant/model year to be remedied.

REMOVING THE CAMSHAFT SEAL

Fig. 373: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

NOTE: **Crankshaft and camshafts must not be turned more than is stated in the method description**

If the shafts are turned in any other way the valves may be damaged.

Remove:

- the cable from the battery negative terminal.

  First read see **BATTERY, DISCONNECTING** .

- the cross stay between the suspension turrets

- the air intake hose for the turbocharger (TC) from the air cleaner (ACL) cover. Put to one side
- the upper timing belt cover
- the cover over the ignition coils
- the upper engine stabiliser brace
- the camshaft position (CMP) sensor housing
- the trigger wheel
- the servo reservoir and the expansion tank. Lift up and place on top of the engine.

WARNING: Ensure that no power steering fluid is spilled. Extremely flammable.

- the auxiliaries belt
- the front timing belt cover.

ALIGNING THE ENGINE ACCORDING TO THE MARKING

Fig. 374: Crankshaft And Camshafts Markings
Courtesy of VOLVO CARS CORPORATION

Raise the car.

Remove:

- the right front wheel
- the nuts for the cover in the wing liner.

Install the upper timing belt cover.

Turn the crankshaft clockwise until the markings on the crankshaft and camshaft pulley correspond.

Turn the crankshaft a further 1/4 of a turn clockwise, then turn back counter-clockwise until the markings correspond.

The markings are illustrated.

Remove the upper timing belt cover.

REMOVING THE TIMING BELT

Fig. 375: Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

- Slacken off the belt tensioner
- Slacken off the centre screw for the belt tensioner slightly
- Hold the centre screw still. Turn the tensioner eccentric clockwise to 10 o'clock using a 6 mm Allen key
- Remove the timing belt from the camshaft pulleys.

REMOVING THE TIMING GEAR PULLEY WITH THE VARIABLE VALVE TIMING UNIT

Fig. 376: Camshaft Adjustment Tool 999 5452 Installed
Courtesy of VOLVO CARS CORPORATION

Use camshaft adjustment tool:

- Install camshaft adjustment tool see **9995452** at the rear of the camshafts.
- First screw in the part of the tool intended for the exhaust camshaft (drilled hole)
- Then carefully turn the exhaust camshaft clockwise with the camshaft adjustment tool until the intake camshaft tool can be applied (threaded hole)
- Install the intake camshaft adjustment tool.

Fig. 377: Camshaft Adjustment Tool 999 5452 Installed
Courtesy of VOLVO CARS CORPORATION

Screw the camshaft adjustment tools together.

Remove:

- the plug at the front edge of the variable valve timing unit (TORX 55)
- the centre screw in the variable valve timing unit (TORX 55). Carefully pull out the timing gear pulley

with the variable valve timing (VVT) unit.

NOTE: Use paper to collect any spilled oil under the variable valve timing units.

REPLACING THE CAMSHAFT SEAL

Fig. 378: Identifying Front Camshaft Seal And Special Tool 999 5651
Courtesy of VOLVO CARS CORPORATION

Carefully press in tool see **9995651** between the sealing ring and the camshaft. Carefully pry out the seal.

Cleaning

To clean the shaft journal and mating surface, use emery cloth P/N 951 1024.

NOTE: When cleaning work around the shaft journal, not in and out. It is essential that any residue from the emery cloth and any other contaminants are completely removed before the new sealing ring is installed.

Fig. 379: Drift 999 5718
Courtesy of VOLVO CARS CORPORATION

Lubricate the new seal. Install the new seal for the exhaust camshaft. Use drift see **9995718** .

INSTALLATION

CHECKING AND ADJUSTING THE VARIABLE VALVE TIMING UNIT

Check and adjust the variable valve timing unit. See: **VARIABLE VALVE TIMING UNIT, CHECKING AND ADJUSTING**

INSTALLING COMPONENTS

Install:

- the front timing belt cover.
- the torque rod bracket
- the cover over the ignition coils
- the upper timing belt cover
- the auxiliaries belt
- the expansion tank
- the servo reservoir. Check that the hoses are correctly positioned

- the starter motor. Tighten the screws at the gearbox to **40 Nm** . Tighten the support bracket screw to **25 Nm**
- the charge air pipe between the throttle body (TB) and the charge air cooler (CAC).

Fig. 380: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the trigger wheel
- the camshaft position (CMP) sensor housing and a new cover
- the intake air hose between the turbocharger (TC) and the air cleaner (ACL) cover
- the engine stabiliser brace. Tighten the screws at the suspension turrets and the screw for motor bracket
- the negative battery cable. **First read** see **BATTERY, DISCONNECTING** .

CHECKING THE ENGINE

Test drive the car to check the function of the engine.

REPLACING THE REAR SEAL

Fig. 381: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

The following components must be removed when replacing the rear seal:

- the cross stay between the suspension turrets
- the air hose from the air cleaner (ACL) to the turbocharger (TC). Place to one side. Seal the openings
- place the air cleaner (ACL) cover to one side
- the charge air pipe over the engine. Seal the openings
- the cover over the ignition coils
- the upper torque rod bracket
- the camshaft position sensor (CMP) housing and trigger wheel.

REPLACING THE REAR CAMSHAFT SEAL

Fig. 382: Identifying Special Tool Extractor 999 5919
Courtesy of VOLVO CARS CORPORATION

Pull out the seal. Use puller see **9995919** . Use emery cloth 951 1024 to clean the shaft journal and mating surface.

NOTE: **When cleaning work around the shaft journal, not in and out. It is essential that any residue from the emery cloth and any other contaminants are completely removed before the new sealing ring is installed.**

Lubricate the surface of the seal that the camshaft rotates against. Install the camshaft seal. Use drift see **9995450** .

NOTE: **The seal is normally pressed in so that it is level with the internal bevelled edge.**

If the shaft journal is showing signs of wear, the seal can be pressed in 2 mm deeper by turning the drift socket.

INSTALLING COMPONENTS

Fig. 383: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the trigger wheel
- the camshaft position (CMP) sensor housing and a new cover
- the torque rod bracket. Tighten
- the cover over the ignition coils
- the charge air pipe over the engine. Remove the seals
- the air cleaner (ACL) cover and the intake air hose
- the engine stabiliser brace. Tighten the screws at the suspension turrets and the screw for motor bracket

Check the engine compartment. Wipe the engine compartment clean.

TIMING BELT, REPLACING

Special tools:

see **9995433**

NOTE: **Since the illustrations in this service information are used for different model years and/or models, some variation may occur. However, the essential information is always correct.**

REMOVE COMPONENTS

Fig. 384: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

CAUTION: Remove the ignition key.

Remove:

- the cross stay between the suspension turrets
- the upper timing belt cover
- the servo reservoir and the expansion tank.

Lift up and place on top of the engine.

WARNING: Ensure that no power steering fluid is spilled. Extremely flammable.

- the auxiliaries belt
- the front timing belt cover.

POSITION THE ENGINE ACCORDING TO THE MARKING

Fig. 385: Crankshaft And Camshafts Markings
Courtesy of VOLVO CARS CORPORATION

- Remove the right front wheel
- Remove the nut from the cover in the wing liner
- Install the upper timing belt cover
- Turn the crankshaft clockwise until the markings on the crankshaft and camshaft pulley correspond
- Turn the crankshaft a further 1/4 turn clockwise and then back again until the markings correspond.

  The markings are illustrated

- Remove the upper timing belt cover.

REMOVING THE TIMING BELT

Fig. 386: Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

Slacken off the belt tensioner.

Slacken off the centre screw for the belt tensioner slightly.

Hold the centre screw still. Turn the tensioner eccentric clockwise using a 6 mm Allen key to 10 o'clock.

Remove the timing belt from the tension pulley, camshaft pulley and water pump.

NOTE: The component can be reused unless it has been subjected to abnormal mechanical stress, damage or oil contamination.

Fig. 387: Identifying Vibration Damper & Counterhold 9995433
Courtesy of VOLVO CARS CORPORATION

Remove the vibration damper.

Remove the oscillation damper. Use counterhold see **9995433** . Work the oscillation damper loose.

Remove the timing belt

CHECKING THE TENSIONER PULLEY AND IDLER PULLEY

Fig. 388: Identifying Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

Check bearing wear:

- spin the idler pulley and listen for noise.

  If replacing with a new idler pulley, tighten to **24 Nm** .

- spin the tension pulley and listen for noise.

  When replacing, screw the tension pulley into place using the centre screw.

Screw in the centre screw by hand.

Ensure that the tensioner fork is centred over the cylinder block rib.

Ensure that the Allen hole on the eccentric is at "10 o'clock".

INSTALLING THE TIMING BELT

Fig. 389: Timing Belt Routing
Courtesy of VOLVO CARS CORPORATION

NOTE: The component can be reused unless it has been subjected to abnormal mechanical stress, damage or oil contamination.

Install the timing belt over the pulley on the crankshaft.

Install the oscillation damper. Tighten the center nut to **180 Nm** . Use counterhold see **9995433** .

Remove the counterhold and install new screws. Tighten the screws to **25 Nm** . Angle-tighten **30°**

Install the new belt in the following order:

- crankshaft

- the idler pulley
- intake camshaft pulley
- exhaust camshaft pulley
- water pump
- belt tensioner.

TIGHTEN THE TIMING BELT

Fig. 390: Identifying Needle Position At Varying Temperatures
Courtesy of VOLVO CARS CORPORATION

This adjustment is carried out on a cold engine. A suitable temperature is approximately 20°C/68°F.

At higher temperatures, for example with the engine at operating temperature or at higher ambient temperature, the needle is further to the right.

The illustration shows the position of the indicator when aligning the timing belt tensioner at different temperatures.

FOR ENGINE SERIAL NO. UP TO 3188688

Fig. 391: Belt Between Intake Camshaft Pulley, Idler Pulley And Crankshaft
Courtesy of VOLVO CARS CORPORATION

Tension the timing belt as follows:

- turn the crankshaft clockwise carefully until the timing belt is tensioned. The belt must be tensioned between the intake camshaft pulley, the idler pulley and the crankshaft
- hold the centre screw on the belt tensioner fixed. Turn the belt tensioner eccentric **counter-clockwise** until the tensioner indicator passes the marked position.

  Then turn the eccentric back so that the indicator reaches the marked position in the centre of the window

- Secure the eccentric and tighten the center screw to **20 Nm** .

Check that the indicator is in the correct position.

FOR ENGINE SERIAL NO. FROM 3188689

Fig. 392: Belt Between Intake Camshaft Pulley, Idler Pulley And Crankshaft
Courtesy of VOLVO CARS CORPORATION

Tension the timing belt as follows:

- turn the crankshaft clockwise carefully until the timing belt is tensioned. The belt must be tensioned between the intake camshaft pulley, the idler pulley and the crankshaft
- hold the centre screw on the belt tensioner fixed. Turn the belt tensioner eccentric **clockwise** until the tensioner indicator passes the marked position.

  Then turn the eccentric back so that the indicator reaches the marked position in the centre of the window

- Secure the eccentric and tighten the center screw to **20 Nm** .

Check that the indicator is in the correct position.

CHECK

Fig. 393: Pressing Belt To Check That Indicator On Tensioner Moves Easily

Courtesy of VOLVO CARS CORPORATION

Checking markings:

- press the belt to check that the indicator on the tensioner moves easily
- install the upper timing belt cover
- turn the crankshaft 2 turns. Check that the markings on the crankshaft and camshaft pulley correspond
- check that the indicator on the belt tensioner is within the marked area.

REINSTALL

Fig. 394: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

Reinstall the removed components:

- the front timing belt cover.

  Tighten to **12 Nm.** .

- the upper timing belt cover
- install the auxiliaries belt
- the servo reservoir
- the expansion tank.

NOTE: Ensure that the hoses are positioned correctly.

- the cross member. Tighten the screws at the suspension turret to **50 Nm** and the screw for the engine bracket to **80 Nm** .

  Wipe clean and check the engine compartment

- the cover in the wing liner
- the front wheel according to **INSTALLING WHEELS** .

CHECKING WORK

Function test:

- Test drive the engine.

VARIABLE VALVE TIMING SOLENOID, REPLACING

ALL MODELS

REMOVING THE VARIABLE VALVE TIMING (VVT) CONTROL VALVE

Fig. 395: Identifying Upper Timing Belt Cover
Courtesy of VOLVO CARS CORPORATION

Remove

- the upper timing belt cover.

NOTE: Clean the area around the variable valve timing (VVT) valve thoroughly to

prevent anything else than clean oil from entering the channels/ variable valve timing (VVT) valve.

Fig. 396: Identifying Variable Valve Timing (VVT) Control Valve
Courtesy of VOLVO CARS CORPORATION

- the connector for the check valve
- the screws holding the valve
- the control valve and the gasket.

APPLIES TO B5244SX MODEL YEARS 1999-2001

A modified VVT-solenoid is now available as spare part for **B5244Sx model years 1999-2001** . This means that the connector on the cable must be replaced.

NOTE: Note the position of the electric connections.

Cut the cables next to the connector.

Fig. 397: Identifying Lock Tab, Seat & Casing
Courtesy of VOLVO CARS CORPORATION

Press up the lock tab and pull out the seat for the connector pins from the casing.

Fig. 398: Identifying Lock
Courtesy of VOLVO CARS CORPORATION

Remove the lock

Fig. 399: Identifying Connector Pin(s) Installation In Seat
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the connector pins end up in the correct position.

Install the connector pins in the seat so that the locks on the pin end up in the opening on the side of the seat.

Fig. 400: Identifying Catch And Casing
Courtesy of VOLVO CARS CORPORATION

Install the catch.

Install the casing.

Splice the cables. See **JOINING THE CABLES**

Fig. 401: Clamping Excess Cable With Cable Ties
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the cable cannot enter the timing gears by clamping any excess cable with cable ties.

APPLIES TO ALL: INSTALLING VVT-CONTROL VALVE

Clean the gasket faces. Note the cleanliness requirements above.

Fig. 402: Identifying Variable Valve Timing (VVT) Control Valve
Courtesy of VOLVO CARS CORPORATION

Install a **new gasket** .

Install a new control valve. Tighten the control valve crosswise. Tighten to **10 Nm**

Connect the connector.

Fig. 403: Identifying Upper Timing Belt Cover
Courtesy of VOLVO CARS CORPORATION

Install the upper timing belt cover.

TIMING GEAR (B5254T2; 2005-2007)

AUXILIARIES BELT / BELT TENSIONER, REPLACING

Special tools:

see **9995722**

see **9997109**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE ENGINE CONTROL MODULE (ECM)

Fig. 404: Identifying Engine Control Module
Courtesy of VOLVO CARS CORPORATION

Ignition off. Wait 2 minutes.

CAUTION: **Do not touch the terminal pins on the engine control module (ECM) with your fingers. Static electricity may damage components in the control module.**

Remove the cover over the control module box. Put the cover to one side.

Insert tool: see **9995722** around the control module. Move the upper section of the tool backwards as far as it will go. Pull up the tool. Carefully pull up the control module.

For vehicles with automatic transmissions repeat the above work.

Remove the surround from around the control module box.

REMOVING THE AUXILIARIES BELT

Fig. 405: Identifying Auxiliaries Belt And Special Tool 999 7109
Courtesy of VOLVO CARS CORPORATION

NOTE: Make a note of the routing of the belt.

Remove the auxiliaries belt. Use: see **9997109** .

REPLACING THE BELT TENSIONER

Fig. 406: Belt Tensioner Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- both mounting screws from the auxiliaries belt bracket for the belt tensioner
- the belt tensioner.

Install:

- a new belt tensioner
- the screws for the belt tensioner. Tighten.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE AUXILIARIES BELT

NOTE: Ensure that the auxiliaries belt is correctly positioned on all the pulleys.

Install the auxiliaries belt. Use: see **9997109** .

INSTALLING THE ENGINE CONTROL MODULE (ECM)

Fig. 407: Identifying Engine Control Module
Courtesy of VOLVO CARS CORPORATION

CAUTION: Check that no pins or sockets are damaged on the connector.

Install the surround for the control module box.

Carefully press the engine control module (ECM) down into the grooves on the inside of the control module box. Press down all the way.

Install the tool: see **9995722** around the control module.

Move the upper section of the tool forwards as far as it will go. Pull up the tool.

Press the cover into place over the control module. Check that the air ducts are correctly positioned.

FINISHING

Start the engine and check the function.

CAMSHAFT SEAL/VARIABLE VALVE TIMING (VVT) UNIT, REPLACING

see **CAMSHAFT SEAL/VARIABLE VALVE TIMING (VVT) UNIT, REPLACING**

TIMING BELT, REPLACING

see **TIMING BELT, REPLACING**

VARIABLE VALVE TIMING SOLENOID, REPLACING

TIMING GEAR (B8444S; 2005-2011)

VVT UNIT EXHAUST CAMSHAFT, REPLACING

Remove VVT-unit exhaust camshaft. See **VVT UNIT, RIGHT CYLINDER HEADVVT UNIT, LEFT CYLINDER HEAD**

AUXILIARIES BELT/BELT TENSIONER, REPLACEMENT

Special tools:

see **9997195**

see **9997279**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE UPPER ENGINE COVERS

Remove the upper engine covers by pulling them straight up.

REMOVING THE COVER OVER THE SERVO PUMP

Remove:

- one end of the ground cable between the engine and body and the hose between the expansion tank and engine
- the 2 screws on the cover over the servo pump
- the cover.

REMOVING THE SERVO OIL LINE

Fig. 408: Removing the Servo Oil Line
Courtesy of VOLVO CARS CORPORATION

Remove:

- the nut of the clamp
- the screw on the oil feed pipe.

Plug the openings and wipe up any spills.

Bend aside the servo oil line. Scrap the gasket.

REMOVING THE AUXILIARIES BELT

Fig. 409: Locking the Tensioner with Holder 9997195
Courtesy of VOLVO CARS CORPORATION

CAUTION: Relieve the load on the belt tensioner by turning it clockwise to max. 230 Nm and lock the tensioner with relevant tool.

CAUTION: Ensure that 230 Nm is not exceeded when the belt tensioner is relieved. The torque takes more than 20 seconds to carry out without risk of affecting the belt tensioner.

see **9997195**

Fig. 410: Routing Of The Belt
Courtesy of VOLVO CARS CORPORATION

Lift off the auxiliaries belt.

HINT: Note the routing of the belt to facilitate reinstallation.

REMOVING THE BELT TENSIONER

Fig. 411: Removing The Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw of the tensioning and damping element
- the center screw to the belt tensioner. see **9997279**
- the belt tensioner.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE BELT TENSIONER

Fig. 412: Removing The Belt Tensioner The Center Screw To The Belt Tensioner. see 9997279 tighten. See Tightening Torque.
Courtesy of VOLVO CARS CORPORATION

Install:

- the belt tensioner
- the center screw to the belt tensioner. see **9997279** Tighten. See **TIGHTENING TORQUE** .
- the screw of the tensioning and damping element; tighten

INSTALLING THE AUXILIARIES BELT

Fig. 413: Installing The Auxiliaries Belt
Courtesy of VOLVO CARS CORPORATION

Install the auxiliaries belt.

Rotate the belt tensioner clockwise to max. 230 Nm and remove tool: see **9997195** .

NOTE: Make sure the belt is properly seated in the groove.

INSTALLING THE SERVO OIL LINE

Fig. 414: Removing the Servo Oil Line
Courtesy of VOLVO CARS CORPORATION

Install:

- a new gasket
- the servo oil line
- the nut on the clamp; tighten
- the screw on the oil feed pipe; tighten.

Wipe up any spills.

INSTALLING THE COVER OVER THE SERVO PUMP

Install:

- the cover over the servo pump.
- the 2 screws; tighten.
- the ground cable between the engine and body and the hose between the expansion tank and engine.

INSTALLING THE UPPER ENGINE COVERS

Position the upper engine covers and press them into the retainers.

Check the crankshaft seal for leakage.

INSTALLATION

NOTE: For tightening torques, see TIGHTENING TORQUE .

INSTALLING THE CARRIER PLATE

Fig. 3: Carrier Plate, Studs And Gear Sector
Courtesy of VOLVO CARS CORPORATION

NOTE: Ensure that the mating surfaces on the crankshaft and carrier plate are completely clean.

Use tool see **9995678** , which consists of 3 studs with nuts.

Install:

- The 3 studs belonging to tool see **9995678** , distributed as illustrated
- the carrier plate.

NOTE: Check that the locating pin on the crankshaft is positioned opposite the hole in the carrier plate.

Locate gear sector see **9995112** against the carrier plate.

Pull the flywheel towards the crankshaft using the three nuts on special tool see **9995678** .

CAUTION: The carrier plate must lie against the crankshaft flange before the screws are installed. There is a risk that excess locking fluid on the screws will come between the mating surfaces.

Install 7 new screws. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .

Remove the 3 nuts and studs.

Install the remaining 3 new screws. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .

Install the engine speed (RPM) sensor with the bracket. Tighten.

FINISHING

Install transmission AW55-50. See **TRANSMISSION, INSTALLING** .

Install transmission AW50AWD. See **TRANSMISSION, INSTALLING** .

CRANKSHAFT SEAL REAR, REPLACING

Special tools:

see **9995112**

see **9997174**

see **9991801**

see **9995678**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information is always correct.**

REMOVAL

REMOVING THE FLYWHEEL AND CARRIER PLATE

Fig. 4: Checking Flywheel
Courtesy of VOLVO CARS CORPORATION

Remove the gearbox:

- See **TRANSMISSION - REMOVAL, REPLACEMENT AND INSTALLATION** .

Remove the flywheel / carrier plate. Use gear sector see **9995112** as a counterhold when slackening off the screws.

REMOVING THE SEAL

Fig. 5: Identifying Old Seal And Special Tool Extractor 999 5651
Courtesy of VOLVO CARS CORPORATION

NOTE: Do not damage the mating surfaces of the crankshaft and cylinder block

Remove the old seal using extractor see **9995651** .

Clean around the crankshaft flange at the front and rear. Remove any thread sealant residue from the screw holes.

If necessary wash off the oil on the rear cylinder block surface and the gearbox clutch housing. Blow clean using compressed air.

Fig. 6: Cleaning Around Crankshaft Flange
Courtesy of VOLVO CARS CORPORATION

CAUTION: When cleaning work around the flange, not in and out. No grinding tools or similar may be used.

It is extremely important that there is no thread sealant residue or other dirt. This could cause leakage.

NOTE: To clean the crankshaft, use cloth 9511024.

INSTALLATION

INSTALLING THE SEALING RING

CAUTION: Only Volvo approved engine oil may be used. Grease must not be used at all. It attracts dirt and results in the build up of coke.

Lubricate the sealing ring mating surface against the cylinder block and the lips of the seal.

Fig. 7: Identifying Special Tool 999 7174
Courtesy of VOLVO CARS CORPORATION

Thread the seal onto the bevelled part of the inner section of see **9997174** with the felt side of the seal outward.

Screw the drift onto the crankshaft (2 screws) of the flywheel.

Pull in the seal with the outer part of the drift, see **9997174** , using the screw in the center of the tool. The seal is in place when the outer drift bottoms against the inner drift. Remove tool see **9997174** . Scrap the old flywheel screws.

INSTALLING FLYWHEEL AND CARRIER PLATE

Fig. 8: 3 Flywheel Studs
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that the surface of the crankshaft and the mating surfaces for the flywheel / carrier plate are clean. Ensure that there is no thread sealant residue in the screw holes.

Install:

- the flywheel and carrier plate
- the 3 studs see **9995678** distributed as illustrated. Turn the short thread length towards the crankshaft.

NOTE: Check that the locating pin on the crankshaft is positioned opposite the hole in the flywheel / carrier plate. The position of the guide hole is marked.

Fig. 9: Checking Flywheel
Courtesy of VOLVO CARS CORPORATION

CAUTION: It is important that the flywheel and carrier plate bear on the crankshaft flange before the other screws are installed.

Always use new screws. Ensure that the thread sealant on the new screws is intact. If not apply a few drops of sealant 1161056 to the thread.

- Align gear sector: see **9995112** .
- Pull the flywheel / carrier plate towards the crankshaft using the 3 nuts on special tool see **9995678** . The turned section of the nut must be turned towards the flywheel / carrier plate.
- Install the other screws. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .
- Replace the 3 special screws with new standard screws. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .
- Then angle-tighten all 10 screws crosswise. Use see **9512050** . Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .
- Ensure that the flywheel sensor and bracket are installed. Install the clutch driven plate and clutch.

INSTALLING THE GEARBOX

Install the gearbox:

- **manual transmissions** . See **TRANSMISSION - REMOVAL, REPLACEMENT AND**

INSTALLATION .

- **automatic transmissions** . See:
- For gasoline 4T65 2003- see **TRANSMISSION, INSTALLING (2003, 2004)** or **TRANSMISSION, INSTALLING (2005, 2006)** .
- For gasoline AW50AWD 2003- see **TRANSMISSION, INSTALLING**
- For gasoline AW55-50 2004- see **TRANSMISSION, INSTALLING** .

CHECKING THE ENGINE:

Test drive the car to check the function of the engine and the gearbox.

CRANKSHAFT SEAL, FRONT, REPLACING

Replace the front crankshaft seal. See **OIL PUMP / CRANKSHAFT SEAL, FRONT, REPLACING** .

CRANK MECHANISM (B6294T; 2003-2006)

CARRIER PLATE, REPLACING

Special tools:

see **9995112**

see **9995678**

REMOVAL

PREPARATORY WORK

Remove the transmission. See **TRANSMISSION, REMOVING** .

REMOVING THE CARRIER PLATE

Remove the engine speed (RPM) sensor with the bracket. Place it to one side.

Fig. 10: Blocking Carrier Plate Using Gear Sector 999 5112
Courtesy of VOLVO CARS CORPORATION

Block the carrier plate using gear sector see **9995112** .

Remove:

- all screws
- the carrier plate
- gear sector see **9995112** .

Fig. 11: Check Crankshaft Seal For Leakage
Courtesy of VOLVO CARS CORPORATION

Check the crankshaft seal for leakage.

INSTALLATION

INSTALLING THE CARRIER PLATE

Fig. 12: Carrier Plate, Studs And Gear Sector
Courtesy of VOLVO CARS CORPORATION

NOTE: Ensure that the mating surfaces on the crankshaft and carrier plate are completely clean.

Use tool see **9995678** , which consists of 3 studs with nuts.

Install:

- the 3 studs belonging to tool see **9995678** , distributed as illustrated
- the carrier plate.

NOTE: Check that the locating pin on the crankshaft is positioned opposite the hole in the carrier plate.

Locate gear sector see **9995112** against the carrier plate.

Pull the carrier plate towards the crankshaft using the three nuts on special tool see **9995678** .

CAUTION: The carrier plate must lie against the crankshaft flange before the screws are installed. There is a risk that excess locking fluid on the screws will come between the mating surfaces.

Install 7 **new** screws. Tighten crosswise. Tighten to **45 Nm** .

Remove the 3 nuts and studs.

Install the remaining 3 **new** screws. Tighten the screws. Tighten to **45 Nm** . Then angle-tighten all 10 screws crosswise 50°.

Install the engine speed (RPM) sensor with the bracket. Tighten to **10 Nm** .

FINISHING

Install the transmission. See **TRANSMISSION, INSTALLING** .

CRANKSHAFT SEAL REAR, REPLACING

Special tools:

see **9995112**

see **9995919**

see **9997174**

see **9991801**

see **9995678**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information is always correct.**

REMOVING THE FLYWHEEL AND CARRIER PLATE

Fig. 13: Checking Flywheel
Courtesy of VOLVO CARS CORPORATION

Remove the gearbox:

- For gasoline 4T65 2003- see **TRANSMISSION, REMOVING** .
- For gasoline AW50AWD 2003- see **TRANSMISSION, REMOVING**
- For gasoline AW55-50 2004- see **TRANSMISSION, REMOVING** .

Remove the flywheel / carrier plate. Use gear sector see **9995112** as a counterhold when slackening off the screws.

REMOVING THE SEAL

Fig. 14: Identifying Old Seal And Special Tool Extractor 999 5651
Courtesy of VOLVO CARS CORPORATION

NOTE: Do not damage the mating surfaces of the crankshaft and cylinder block

Remove the old seal using extractor see **9995919** .

Clean around the crankshaft flange at the front and rear. Remove any thread sealant residue from the screw holes.

If necessary wash off the oil on the rear cylinder block surface and the gearbox clutch housing. Blow clean using compressed air.

Fig. 15: Cleaning Around Crankshaft Flange
Courtesy of VOLVO CARS CORPORATION

CAUTION: When cleaning work around the flange, not in and out. No grinding tools or similar may be used.

It is extremely important that there is no thread sealant residue or other dirt. This could cause leakage.

NOTE: To clean the crankshaft, use cloth 9511024.

INSTALLING THE SEALING RING

CAUTION: Only Volvo approved engine oil may be used. Grease must not be used at all. It attracts dirt and results in the build up of coke.

Lubricate the sealing ring mating surface against the cylinder block and the lips of the seal.

Fig. 16: Identifying Sealing Ring
Courtesy of VOLVO CARS CORPORATION

Thread the seal onto the beveled section of the inner section of tool see **9997174** with the felt side of the seal outwards. Install the drift on the crankshaft, 2 x screws, for the flywheel. Pull in the seal using the outer section of the drift: see **9997174** using the screw in the center of the tool. The seal is in position when the outer drift bottoms out against the inner drift. Remove the tool: see **9997174** . Discard the old screws for the flywheel.

INSTALLING FLYWHEEL AND CARRIER PLATE

Fig. 17: 3 Flywheel Studs
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that the surface of the crankshaft and the mating surfaces for the flywheel / carrier plate are clean. Ensure that there is no thread sealant residue in the screw holes.

Install:

- the flywheel and carrier plate

- the 3 studs see **9995678** distributed as illustrated. Turn the short thread length towards the crankshaft.

NOTE: Check that the locating pin on the crankshaft is positioned opposite the hole in the flywheel / carrier plate. The position of the guide hole is marked.

Fig. 18: Checking Flywheel
Courtesy of VOLVO CARS CORPORATION

CAUTION: It is important that the flywheel and carrier plate bear on the crankshaft flange before the other screws are installed.

Always use new screws. Ensure that the thread sealant on the new screws is intact. If not apply a few drops of sealant 1161056 to the thread.

- Align gear sector: see **9995112** .
- Pull the flywheel / carrier plate towards the crankshaft using the 3 nuts on special tool see **9995678** . The turned section of the nut must be turned towards the flywheel / carrier plate.
- Install the other screws. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .
- Replace the 3 special screws with new standard screws. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .
- Then angle tighten all 10 screws crosswise. Use see **9512050** . Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .
- Ensure that the flywheel sensor and bracket are installed. Install the clutch driven plate and clutch.

INSTALLING THE GEARBOX

Install the gearbox:

- For gasoline 4T65 2003- see **TRANSMISSION, REMOVING** .
- For gasoline AW50AWD 2003- see **TRANSMISSION, REMOVING**

- For gasoline AW55-50 2004- see **TRANSMISSION, REMOVING** .

CHECKING THE ENGINE:

Test drive the car to check the function of the engine and the transmission.

CRANKSHAFT SEAL, FRONT, REPLACING

Special tools:

see **9995304**

see **9995919**

see **9995455**

see **9995433**

REMOVAL

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Remove the timing belt. See **REMOVAL**.

Check the tensioner and idler pulleys. See **CHECKING THE TENSIONER PULLEY AND IDLER PULLEY**.

Fig. 19: Pulling Away Timing Gear Pulley Using Puller 999 5304
Courtesy of VOLVO CARS CORPORATION

Carefully pull crankshaft timing gear pulley free. Use puller see **9995304** .

REMOVING FRONT CRANKSHAFT SEAL

Fig. 20: Identifying Seal Installation Using Tool 9995455
Courtesy of VOLVO CARS CORPORATION

Remove the old seal. Use extractor see **9995919** .

Clean sealing surfaces.

Lubricate and install the new seal. Use drift see **9995455** .

Press in drift and seal with crankshaft center nut.

NOTE: **Ensure that the crankshaft does not rotate when pressing in the crankshaft seal.**

INSTALLATION

FINISHING

Fig. 21: Installing Pulley For Auxiliaries Belt
Courtesy of VOLVO CARS CORPORATION

Install a **new timing belt** . See **INSTALLATION**.

Install the pulley for the auxiliaries belt. Locate the steering gear on the locating pin in the timing gear pulley.

Install the auxiliaries belt.

Install counterhold see **9995433** .

Tighten the crankshaft center nut. Install the vibration damper using **new screws** . See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Use the crankshaft center nut as a counterhold.

FINAL CHECK

Check the engine oil level. Top up if necessary.

Test drive the engine.

CRANKSHAFT MECHANISM (B8444S, TF-80SC AWD; 2005-2011)

CARRIER PLATE, REPLACING

REMOVAL

REMOVING THE TRANSMISSION AND CARRIER PLATE

Remove the transmission. See **REPLACING THE GEARBOX** .

Fig. 22: Locking The Carrier Plate
Courtesy of VOLVO CARS CORPORATION

Lock the carrier plate using an M10 screw. Remove the carrier plate.

INSTALLATION

INSTALLING THE CARRIER PLATE

Fig. 23: Identifying The Carrier Plate
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that the mating surfaces on the crankshaft and carrier plate are completely clean.

The carrier plate must lie against the crankshaft flange before the screws are installed. There is a risk that excess locking fluid on the screws will come between the mating surfaces.

Brush off all the old locking fluid from the two old screws. Use a wire brush. Mark the cleaned screws using a marker pen.

Install:

- the carrier plate, tighten it in towards the crankshaft with the two cleaned and marked screws.

NOTE: Check that the locating pin on the crankshaft is positioned opposite the hole in the carrier plate.

- 6 x **new** screws. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Remove the two old marked screws.

Install the remaining **new** screws. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Fig. 24: Locking The Carrier Plate
Courtesy of VOLVO CARS CORPORATION

Remove the locking screw.

INSTALLING THE GEARBOX

Install the gearbox. See: **REPLACING THE GEARBOX** .

CRANKSHAFT SEAL REAR, REPLACING

Special tools:

see **9995651**

see **9997194**

NOTE: The illustrations in this service information are used for different model years

and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVAL

REMOVING THE CARRIER PLATE

Remove the carrier plate. See: **CARRIER PLATE, REPLACING**.

REMOVING THE REAR SEALING RING

Fig. 25: Identifying Old Seal And Special Tool Extractor 999 5651
Courtesy of VOLVO CARS CORPORATION

CAUTION: Do not damage the mating surfaces of the crankshaft and cylinder block.

Remove the old sealing ring using puller see **9995651** .

Clean around the crankshaft flange and screw holes to remove any thread sealant residue. If necessary, wash and dry away any oil from the engine's rear engine block plane and the transmission clutch housing. Blow clean with compressed air.

Fig. 26: Cleaning Around Crankshaft Flange
Courtesy of VOLVO CARS CORPORATION

CAUTION: When cleaning work around the flange, not in and out. No grinding tools or similar may be used. It is extremely important that there is no thread sealant residue or other dirt. This could cause leakage.

NOTE: To clean the crankshaft, use cloth 9511024.

INSTALLATION

INSTALLING THE REAR SEALING RING

CAUTION: Only Volvo approved engine oil may be used. Grease must not be used at all. It attracts dirt and results in the build-up of coke.

Fig. 27: Locating The Inner Part Onto The Crankshaft (Tool 9997194)
Courtesy of VOLVO CARS CORPORATION

Lubricate the sealing ring mating surface against the cylinder block and the lips of the seal.

Fit a new sealing ring on the inner part of tool see **9997194** and screw the inner part onto the crankshaft using two old screws from the carrier plate.

Fig. 28: Press In The Sealing Ring With The Outer Part (Tool 9997194)
Courtesy of VOLVO CARS CORPORATION

Press in the sealing ring with the outer part of tool see **9997194** with the center screw to the stop.

Remove tool see **9997194** . Scrap the carrier plate screws.

INSTALLING THE CARRIER PLATE

Install the carrier plate. See to: **CARRIER PLATE, REPLACING**.

CRANKSHAFT SEAL, FRONT, REPLACING

Special tools:

see **9997196**

see **9997198**

see **9995304**

see **9995069**

see **9997197**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE AUXILIARIES BELT

Remove the auxiliaries belt. See **AUXILIARIES BELT/BELT TENSIONER, REPLACEMENT** .

REMOVING THE RIGHT FRONT WHEEL

Raise the vehicle. See **JACKING POINTS, BODY** .

Remove:

- the right front wheel
- the 1 plastic nut of the wheel arch liner. Bend aside the wheel arch liner.

REMOVING THE VIBRATION DAMPER

Fig. 29: Identifying Counterhold 9997196

Courtesy of VOLVO CARS CORPORATION

Install counterhold see **9997196** . Undo the center screw.

Fig. 30: Identifying Insert Screw
Courtesy of VOLVO CARS CORPORATION

Insert screw see **9997198** in the center hole of the crankshaft.

Fig. 31: Puller 9995304 Installed
Courtesy of VOLVO CARS CORPORATION

Install puller see **9995304** . Pull off the vibration damper.

REMOVING THE FRONT SEALING RING

Fig. 32: Removing the Sealing Ring Using Puller 9995069
Courtesy of VOLVO CARS CORPORATION

Remove:

- the sealing ring using puller see **9995069**
- screw see **9997198** in the center hole of the crankshaft.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE FRONT SEALING RING

Fig. 33: Installing New Sealing Ring With Drift 9997197
Courtesy of VOLVO CARS CORPORATION

Install a new sealing ring with drift see **9997197** . Pull the drift in to the stop with the old center screw. Remove the drift.

INSTALLING THE VIBRATION DAMPER

Clean the surface for the sealing ring on the vibration damper with cloth 951 1024.

CAUTION: The direction of cleaning should be around the flange.

Fig. 34: Identifying The Vibration Damper
Courtesy of VOLVO CARS CORPORATION

Install:

- the vibration damper
- screw see **9997198** in the center hole of the crankshaft.

Fig. 35: Counterhold 9997196 Installed
Courtesy of VOLVO CARS CORPORATION

Install:

- counterhold see **9997196**

- drift see **9997198** and press the vibration damper in to the stop using the old center screw. Tighten to 100 Nm.

Remove:

- the center screw; scrap it
- tools see **9997198** and see **9997198** .

Insert a new screw at the vibration damper and tighten as specified: **TIGHTENING TORQUE** .

Remove counterhold see **9997196** .

INSTALLING THE RIGHT FRONT WHEEL

Install:

- the wheel arch liner; tighten the plastic nut
- the right front wheel. See **INSTALLING WHEELS** .

Lower the vehicle.

INSTALLING THE AUXILIARIES BELT

Install the auxiliaries belt. See **AUXILIARIES BELT/BELT TENSIONER, REPLACEMENT** .

CHECK

Start the engine and check for leaks and proper function.

CYLINDER HEAD (B5254T2; 2003-2007)

CYLINDER HEAD/GASKET, REPLACEMENT

Special tools:

see **9995452**

see **9995454**

see **9995670**

see **9995451**

see **9512050**

see **9512767**

see **9995450**

see **9995718**

see **9995719**

NOTE: **Since the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

NOTE: **There are a number of versions of the VVT-unit (variable valve timing). Therefore it is extremely important to always read the information referring to the engine variant/model year to be remedied.**

REMOVAL

PREPARATION

Fig. 36: Pinching Expansion Tank Hose
Courtesy of VOLVO CARS CORPORATION

Remove

- the radiator breather tube from the expansion tank. Install lock grip pliers
- the battery negative lead. First read, see **BATTERY, DISCONNECTING**
- the right front wheel.

DRAINING COOLANT

Fig. 37: Coolant Drain Plug
Courtesy of VOLVO CARS CORPORATION

Raise the car.

Remove the splash guard under the engine.

Open the engine nipple.

Drain the coolant into a container.

Close the nipple.

REMOVING COMPONENTS

Fig. 38: Identifying Clamp, Pipe Screw, Oil Return Line And Turbocharger
Courtesy of VOLVO CARS CORPORATION

Remove:

- the clamp between the oil pressure pipe and the oil return line at the turbocharger (TC)

- the pipe screw that holds the oil pressure pipe to the connector on the cylinder block
- the oil return line. Seal the opening in the cylinder block
- the lower screw that holds the heat deflector plate over the turbocharger (TC)
- the nuts for the front exhaust pipe connection to the turbocharger (TC). Lift off the exhaust pipe and tie it up. Seal the opening in the exhaust pipe

NOTE: The metal hose for the front exhaust pipe is easy to damage if it is twisted. Handle it with care to avoid leakage.

DEPRESSURIZING THE FUEL SYSTEM

Lower the car.

Depressurize the fuel system acc. to:

Start the engine.

Remove the fuel pump fuse.

The engine will stop after approx. 20 seconds.

Turn over the engine 3-5 seconds.

Switch off the ignition.

Replace the fuse.

REMOVING COMPONENTS

Fig. 39: Engine Compartment
Courtesy of VOLVO CARS CORPORATION

Remove

- the engine stabilizer brace between the suspension turrets
- the ground strips between the engine and the firewall
- the heat deflector plate above the turbocharger (TC)
- the plastic charge air pipe above the engine. Seal the openings
- the cover over the nozzle pipes
- the cover over the ignition coils
- the upper engine coolant hose for the engine and radiator
- the screw holding the dip stick pipe to the intake manifold
- the brake vacuum hose from the intake manifold.

Undo the clamp holding the plastic charge air pipe to the electronic throttle module.

Fig. 40: Air Cleaner And Fuse Box
Courtesy of VOLVO CARS CORPORATION

Remove

- the connector from the mass air flow (MAF) sensor
- the intake hose from the mass air flow (MAF) sensor. Seal the opening.

Release the hoses from the bracket at the rear of the cylinder head. Remove the bracket.

Remove

- the clamp for the positive lead at the rear of the cylinder head
- the torque bracket
- the pipe screw for the water-heated crankcase ventilation.

REMOVING THE FUEL RAIL

Fig. 41: Fuel Rail
Courtesy of VOLVO CARS CORPORATION

- Remove the clamp for the injector wiring at the rear of the cylinder head
- Detach the wiring from the injectors
- Remove the fuel rail mounting screws
- Spray universal oil or similar around the injector connectors on the intake manifold
- Gently work the fuel rail and injectors loose
- Separate the quick-release connector for the fuel line. See **FUEL LINE, LOCK**.
- Carefully put the fuel rail to one side.

FUEL LINE, LOCK

REMOVING LOCK

Fig. 42: Identifying Secondary Lock & Screw

Unscrew the screw (1).

Bend out the secondary lock (2). Pull out the catch.

Remove the fuel rail.

INSTALLING THE LOCK

Fig. 43: Identifying Secondary Lock & Screw

NOTE: Screw in the screw until it takes.

Install the fuel rail.

Press in the secondary lock (2).

Screw the screw (1) right in.

REMOVING IGNITION COILS

Fig. 44: Identifying Ignition Coils
Courtesy of VOLVO CARS CORPORATION

- Mark up the ignition coils so that their original positions can be established
- Remove the mounting screws for the ignition coils and the screws at the two ground terminals
- Disconnect the connector for the variable valve timing solenoid
- Lift up and place the ignition coils and wiring to one side.

Remove:

- the crankcase ventilation hose from the top of the camshaft cover
- the camshaft position sensor (CMP) housing and trigger wheel.

REMOVING INTAKE MANIFOLD

Fig. 45: Identifying Intake Manifold
Courtesy of VOLVO CARS CORPORATION

Remove:

- The EVAP hose from the intake manifold
- the by-pass valve vacuum hose. Disconnect the connector for the electronic throttle module (ETM)
- the upper row of screws holding the intake manifold to the cylinder head. Slacken off the lower screws. Lift up the intake manifold. Remove the pipe screw for the water heated crankcase ventilation underneath the intake manifold
- the pipe screw for the crankcase ventilation from the underside of the intake manifold.

Lift up and remove the intake manifold.

NOTE: Make sure that the fuel pressure pipe is not damaged.

REMOVING COMPONENTS

Fig. 46: Expansion Tank And Servo Oil Reservoir
Courtesy of VOLVO CARS CORPORATION

Disconnect the connectors for the ABS sensor and level sensor in the expansion tank.

Lift up the expansion tank and servo oil reservoir. Place them on top of the engine.

NOTE: Make sure that oil does not leak from the breather hole in the filler cap.

Remove the auxiliaries belt.

Remove:

- front timing cover
- the hose for the water-heated crankcase ventilation from the thermostat housing.

Separate the connector for the engine coolant temperature (ECT) sensor.

SETTING UP THE ENGINE

Fig. 47: Crankshaft And Camshafts Markings
Courtesy of VOLVO CARS CORPORATION

Remove the nuts from the cover on the fender liner.

Turn the crankshaft clockwise until the markings on the crankshaft and camshafts correspond.

Remove the upper timing cover.

REMOVING THE TIMING BELT

Slacken off the center screw for the belt tensioner slightly.

Hold the center screw secure and turn the tensioner eccentric clockwise with a 6 mm Allen key to 10 o'clock.

Remove:

- the timing belt from the timing gear pulley
- the screw that holds the inner timing cover to the cylinder head.

Install tool see **9995452** at the rear of the camshafts.

REMOVING THE TIMING GEAR PULLEY

Remove the cable duct from its mountings on the right-hand suspension turret.

NOTE: Do not damage the paintwork.

Hold the cable duct out of the way and remove:

- the plug at the front of the variable valve timing unit (TX55).

  NOTE: Use paper or similar to absorb oil that drains.

- the center screw in the variable valve timing unit (TX55).

Carefully pull out the timing gear pulley with the variable valve timing (VVT) unit.

Remove tool see **9995452** .

REMOVING COMPONENTS FROM TURBOCHARGER (TC)

Fig. 48: Identifying Turbocharger Components
Courtesy of VOLVO CARS CORPORATION

Remove:

- the heat deflector plate above the manifold
- the upper engine coolant pipe. Place it to one side
- the oil pressure pipe for the turbocharger (TC)
- the pipe screw at the lower coolant pipe for the turbocharger (TC). Put the pipe to one side
- the nuts and washers holding the manifold to the cylinder head.

Lift off the turbocharger and manifold. Carefully put them on top of the transmission.

RELEASING THE INLET PIPE FOR THE COOLANT PUMP

Fig. 49: Viewing Coolant Pump Inlet Pipe
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw that holds the coolant pump intake pipe to the engine block a few turns. Leave the screw in place
- the two screws for the connection between the coolant pipe and the bypass channel. Carefully turn the pipe to remove it from the cylinder block.

REMOVING THE CAMSHAFT COVER AND CYLINDER HEAD

Fig. 50: Identifying Special Tool 999 5454
Courtesy of VOLVO CARS CORPORATION

- Remove the spark plugs from cylinders 1 and 5
- Install 2 tools see **9995454** . Leave a 2-3 mm gap to the camshaft cover.

NOTE: Make sure that the screw in the sparkplug thread is fully tightened. VVT-solenoid (variable valve timing).

- The variable valve timing solenoids.
- Remove all the screws securing the camshaft cover to the cylinder head.

Fig. 51: Identifying Pliers And Stop Lugs
Courtesy of VOLVO CARS CORPORATION

- Use pliers see **9995670** to lift the cover from the cylinder head.
- Install the pliers at the stop lugs. Start with cylinder 1 and work alternately backwards
- Slacken off the wing nuts approximately 2 turns. Repeat the procedure.

Fig. 52: Identifying Pressing Out Of Camshaft Seals
Courtesy of VOLVO CARS CORPORATION

Carefully press out the front and rear camshaft seals.

Fig. 53: Cylinder Head Bolt Removal Sequence
Courtesy of VOLVO CARS CORPORATION

Remove:

- tools see **9995454**
- the camshaft cover
- the camshafts
- the screws holding the cylinder head onto the cylinder block. Start at the sides and work alternately towards the center.

Get some help and lift of the cylinder head. Place the cylinder head on two wooden blocks.

NOTE: Work carefully to avoid damaging the contact faces.

WHEN REPLACING OR WORKING ON THE CYLINDER HEAD

Lift out the valve lifters. Use a magnet or suction cup.

Remove the thermostat housing and transfer it to the new cylinder head.

NOTE: Work carefully to avoid damaging the contact faces.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

NOTE: To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .

CLEANING

Fig. 54: Cleaning Camshaft And Cylinder Block
Courtesy of VOLVO CARS CORPORATION

WARNING: Use a fume hood or extractor when using gasket solvent

Clean the gasket faces for:

- the manifold. Check that the studs are tightened
- the coolant bypass channel
- the thermostat housing
- the intake manifold
- the cylinder block
- camshaft cover.

Blow the oil ducts clean.

NOTE: Use a razor blade or a gasket scraper and gasket solvent P/N 1161 440.

SETTING UP THE ENGINE

Fig. 55: Crankshaft Stop Tool 9995451 Installed
Courtesy of VOLVO CARS CORPORATION

- Position the crankshaft
- Remove the starter motor mounting screws. Pull out the starter motor and place it to one side
- Remove the blind cover plug
- Turn the crankshaft slightly **clockwise** .
- Install crankshaft stop see **9995451** . Ensure that it bottoms out against the cylinder block.
- Turn the crankshaft **counter-clockwise** until it stops against the crankshaft stop
- Check that the marking on the crankshaft timing gear pulley corresponds with the marking on the oil pump.

INSTALLING THE CYLINDER HEAD

Fig. 56: Cylinder Head Bolt Installation Sequence
Courtesy of VOLVO CARS CORPORATION

- Ensure that all studs at the exhaust ports are tightened
- Lubricate the studs with paste **116 1408.**
- Install a new cylinder head gasket
- Install the cylinder head
- Lubricate and install all the screws (use new screws).
- Tighten the screws as illustrated. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** . Use protractor see **9512050** .

INSTALLING VALVE LIFTERS AND CAMSHAFTS

Fig. 57: Identifying Intake And Exhaust Camshafts
Courtesy of VOLVO CARS CORPORATION

- Lubricate the valve lifter wells.

NOTE: **If the cylinder head has been replaced, the valve clearance must be adjusted. See VALVE CLEARANCE .**

- Install all valve lifters
- Lubricate the camshaft bearing positions
- Install the intake camshaft. Ensure that the groove at the back of the camshaft is **above** an imaginary center line
- Position the exhaust camshaft. Ensure that the groove at the back of the camshaft is **below** an imaginary center line.

APPLYING LIQUID GASKET

Fig. 58: Applying Liquid Gasket
Courtesy of VOLVO CARS CORPORATION

Install new O-rings around the spark plug wells at the cylinder head.

Apply liquid gasket **1161 059** to the camshaft cover.

Use roller see **9512767** . The surface must be **covered without any excess** .

NOTE: Make sure that no liquid gasket ends up in the oil channels.

INSTALLING THE CAMSHAFT COVER

Fig. 59: Identifying Special Tool 999 5454
Courtesy of VOLVO CARS CORPORATION

- Lubricate the camshaft lobes, the camshaft bearing surfaces and the valve lifters
- Install the camshaft cover
- Install press tool see **9995454** (2x).
- Tighten the camshaft cover screws alternately, keeping it parallel to the cylinder head using the press

tools

- Install all the screws. Tighten the screws from the middle and outwards
- Remove the press tools.

Fig. 60: Viewing Coolant Pump Inlet Pipe
Courtesy of VOLVO CARS CORPORATION

Install:

- the variable valve timing (VVT) solenoid. Use a new gasket.
- the spark plugs. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES**
- the hose for water-heated crankcase ventilation to the thermostat housing. Tighten the clamp.

Connect the connector for the engine coolant temperature (ECT) sensor.

Install the inlet pipe for the coolant pump on the cylinder head. Use a new gasket.

NOTE: Apply thread sealant, 116 056 to the screw threads.

Tighten the screw for securing the coolant pump inlet pipe to the cylinder block.

INSTALLING THE MANIFOLD AND TURBOCHARGER (TC)

Fig. 61: Identifying Manifold And Turbocharger
Courtesy of VOLVO CARS CORPORATION

Install:

- new gaskets. Lift and install the manifold and turbocharger (TC)
- the nuts and washers holding the manifold to the cylinder head
- the upper and lower turbocharger (TC) coolant pipes. Tighten the clamp on the rubber hose
- the pipe screws for the coolant pipes. Use new seal washers. Tighten
- the oil pressure pipe
- the pipe screw holding the oil pressure pipe to the turbocharger (TC). Use new seal washers. **Do not tighten.**

Lubricate the studs on the turbocharger (TC). Use paste **116 1408** .

Install the front exhaust pipe onto the turbocharger (TC). Use new nuts. **Do not tighten.** Install the heat deflector plate over the manifold.

INSTALLING THE REAR CAMSHAFT SEAL

Fig. 62: Identifying Rear Camshaft Seal And Special Tool 999 5450
Courtesy of VOLVO CARS CORPORATION

To clean the shaft journal and mating surface, use emery cloth P/N 951 1024.

NOTE: For cleaning, work around the shaft journal - not in and out. It is essential that any residue from the emery cloth and any other contaminants are completely removed before the new seal ring is installed.

Use drift see **9995450** .

Lubricate the surface of the seal that the camshaft rotates against.

Press in the seal until the drift bottoms out.

NOTE: If there are grooves on the camshaft, the seal can be pressed in a further 2 mm: Reverse the sleeve.

Install camshaft adjustment tool see **9995452** at the rear of the camshafts.

Ensure that the screws retaining the adjustment tool to the camshafts and the screws holding the tool together are well tightened.

INSTALLING THE FRONT CAMSHAFT SEALS

Fig. 63: Front Camshaft Seals
Courtesy of VOLVO CARS CORPORATION

- Use drift see **9995718** .
- Lubricate the surface of the seal that the camshaft rotates against.
- Use the variable valve timing unit / timing belt pulley mounting screws. Tighten the screws until the drift bottoms out
- Remove the drift
- Install the screw holding the inner timing cover to the cylinder head.

CHECKING AND ADJUSTING THE VARIABLE VALVE TIMING UNIT

Check and adjust the variable valve timing unit. See: **VARIABLE VALVE TIMING UNIT, CHECKING AND ADJUSTING**

INSTALLING COMPONENTS

Fig. 64: Expansion Tank And Servo Oil Reservoir
Courtesy of VOLVO CARS CORPORATION

Install:

- front timing cover
- the cable duct to the mountings on the right suspension turret
- the auxiliaries belt
- the expansion tank
- the servo oil reservoir
- the bleed hose to the expansion tank. Tighten the clamp.

Check that the hoses are installed correctly.

Connect the connectors for the ABS sensor at the right suspension turret and for the coolant level sensor in the expansion tank.

Fig. 65: Engine Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the starter motor
- the pipe screw for the water heated crankcase ventilation at the rear of the cylinder head. Use new seal washers. Tighten to **26 Nm**
- the camshaft position sensor (CMP) housing and trigger wheel
- the lower engine stabilizer brace bracket in the cylinder head
- the upper engine stabilizer brace.

Fig. 66: Identifying Ignition Coils And Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the bracket and lifting eyelet for the engine stabilizer brace bracket
- the ignition coils and ground terminals according to earlier markings. Connect the connector for the variable valve timing solenoid
- the clamp for the positive lead at the lifting eyelet bracket
- the plastic intake pipe to the mass air flow (MAF) sensor. Tighten the clamp.

Connect the connector to the mass air flow (MAF) sensor. Use a clamp on the wiring at the front of the air cleaner (ACL).

INSTALLING INTAKE MANIFOLD

Fig. 67: Identifying Intake Manifold And Components
Courtesy of VOLVO CARS CORPORATION

Clean the intake manifold gasket face to the cylinder head.

Install a new gasket on the cylinder head. Secure with the two screws in the lower row.

Lower and twist the intake manifold so that the fuel pressure line goes through the cavity in the intake manifold.

NOTE: Work carefully to avoid damaging the fuel pressure pipe.

Route the crankcase ventilation hose through the cavity in the intake manifold.

Install:

- the pipe screw for the crankcase ventilation on the underside of the intake manifold. Use new seal washers. Tighten to **26 Nm**
- the rest of the screws holding the intake manifold to the cylinder head. Tighten to **19 Nm**
- the hose to the canister purge (CP) valve
- the control hose for the turbocharger (TC) by-pass valve
- the brake vacuum hose
- the crankcase ventilation hose to the top of the camshaft cover. Use a new clamp
- the cover over the ignition coils
- the upper timing cover
- the upper engine coolant hose for the engine and radiator. Tighten the clamp
- the screw holding the dip stick pipe to the intake manifold. Connect the connector to the electronic throttle module (ETM)
- the charge air pipe between the throttle body (TB) and the charge air cooler (CAC). Remove the seal. Tighten the clamp.

INSTALLING THE FUEL RAIL

Fig. 68: Fuel Rail And Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the fuel rail. Use new screws. Press the quick-release connector for the fuel pressure line until it clicks. See **FUEL LINE, LOCK**
- the clamp for the injector wiring at the rear of the cylinder head
- the protective cover over the injector connectors
- the charge air pipe over the engine. Tighten the pipe using the three screws on the engine. Tighten the clamps.

INSTALLING COMPONENTS

Fig. 69: Identifying Clamp, Pipe Screw, Oil Return Line And Turbocharger
Courtesy of VOLVO CARS CORPORATION

Raise the car. Install:

- the pipe screw that holds the turbocharger (TC) oil pressure pipe to the engine. Use new seal washers. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES**
- the turbocharger (TC) oil return line. Use a new gasket and sealing ring. Tighten. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES**
- the clamp between the oil pressure pipe and the oil return line. Tighten the three nuts that hold the front exhaust pipe to the turbocharger (TC). See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .
- the lower screw for the heat deflector plate over the turbocharger (TC)
- the splash guard under the engine
- the plastic nuts for the hatch in the right fender liner
- the right front wheel. See **INSTALLING WHEELS** .

Fig. 70: Engine Compartment
Courtesy of VOLVO CARS CORPORATION

Lower the car.

Tighten the pipe screw for the turbocharger (TC) oil pressure pipe. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** .

Install:

- the ground strips between the cylinder head and the firewall
- the engine stabilizer brace between the suspension turrets Clamp the servo hose at the right-hand engine stabilizer brace mounting
- the negative battery lead. First read, see **BATTERY, DISCONNECTING** .

CHECK

Replace the oil and oil filter if necessary.

Check:

- the engine oil level
- the servo oil level
- the coolant level.

Warm up the engine until the thermostat opens.

Check the engine for leaks.

Top up the coolant if necessary.

CYLINDER HEAD (B6294T; 2003-2006)

CYLINDER HEAD/GASKET, REPLACING

Special tools:

see **9995452**

see **9512666**

see **9995454**

see **9995670**

see **9995451**

see **9512050**

see **9995450**

see **9995718**

see **9512767**

REMOVAL

PREPARATIONS

NOTE: **Since the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

Fig. 71: Identifying Servo Oil Reservoir And Expansion Tank
Courtesy of VOLVO CARS CORPORATION

- Disconnect the battery negative lead. First read, see **BATTERY, DISCONNECTING**
- Remove the radiator breather tube at the expansion tank
- Install lock grip pliers
- Install the cover from the expansion tank.

Lift up the servo reservoir and place it on top of the engine.

NOTE: Make sure that the power steering fluid does not leak from the breather hole in the filler cap.

Seal the hose between the expansion tank and the radiator.

Disconnect the hose at the tank. Lift up the expansion tank and place it on top of engine.

Remove the turbocharger (TC). See **TURBOCHARGER (TC), REPLACING** .

REMOVING COMPONENTS

Fig. 72: Identifying Engine Compartment
Courtesy of VOLVO CARS CORPORATION

Remove:

- the ground strip between the cylinder head and the engine
- the upper engine coolant hose between the engine and radiator
- the solenoid valve (turbocharger (TC) control system) from the air cleaner (ACL)
- the air cleaner (ACL) intake from the connection on the front cover plate
- air cleaner (ACL) assembly
- torque rod for cross stay
- the upper timing cover
- the cover over the ignition coils
- the front timing cover. See **TIMING COVER FRONT, REPLACING** .

Relieve the load from the belt tensioner. Remove the auxiliaries belt.

DEPRESSURIZING THE FUEL SYSTEM

Depressurize the fuel system acc. to **DEPRESSURIZING THE FUEL SYSTEM**.

REMOVING THE FUEL RAIL

Fig. 73: Removing/Installing Fuel Rail
Courtesy of VOLVO CARS CORPORATION

Remove:

- the brake vacuum hose from the intake manifold
- the charge air pipe from the electronic throttle module
- the dip stick pipe from the intake manifold
- the pipe screw for the crankcase ventilation connection at the intake manifold
- the protective cover over the nozzle connectors
- the fuel rail mounting screws.

Spray universal oil or similar around the injector connectors on the intake manifold. Gently work the fuel rail and injectors loose.

Unplug fuel line's quick-connector under the intake manifold. Use tool see **9512666** . Carefully put the fuel rail to one side.

Remove the EVAP hose from the intake manifold.

REMOVING COMPONENTS

Fig. 74: Camshaft Position (CMP) Sensor Housing, Trigger Wheel, Pipe Screw For Water-Heated Crankcase Ventilation & Clamps
Courtesy of VOLVO CARS CORPORATION

Remove:

- the camshaft position (CMP) sensor housing and trigger wheels
- the pipe screw at the rear edge of the cylinder head for the water heated crankcase ventilation
- the clamps for the high tension wiring and positive cable.

RELEASING THE INLET PIPE FOR THE COOLANT PUMP

Fig. 75: Viewing Coolant Pump Inlet Pipe
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw that holds the inlet pipe for the coolant pump on the cylinder block
- the two screws for the connector between the coolant pipe and the bypass channel. Carefully turn the pipe to remove it from the cylinder block.

SETTING UP THE ENGINE

Fig. 76: Identifying Camshafts And Crankshaft Markings
Courtesy of VOLVO CARS CORPORATION

- Remove the nuts from the cover on the fender liner
- Position the upper timing cover
- Turn the crankshaft clockwise until the markings on the crankshaft and camshafts correspond
- Remove the upper timing cover.

REMOVING COMPONENTS

Fig. 77: View of Ignition Coils, Connectors and Ground Terminals
Courtesy of VOLVO CARS CORPORATION

Remove:

- the variable valve timing solenoid connectors
- the connector for the coolant temperature sensor
- the screws for the ignition coils and the two ground terminals.

NOTE: Mark up the ignition coils before removing.

Lift up and place the ignition coils and wiring to one side.

REMOVING THE TIMING BELT

Fig. 78: Identifying Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

Slacken off the center screw for the belt tensioner slightly.

Hold the center screw still. Turn the tensioner eccentric clockwise to **10 o'clock** using a **(6 mm) Allen key** .

Remove the timing belt.

REMOVING THE VARIABLE VALVE TIMING UNIT AND TIMING GEAR PULLEY

Fig. 79: Camshaft Adjustment Tool 999 5452 At Rear Of Camshafts
Courtesy of VOLVO CARS CORPORATION

Install tool see **9995452** at the rear of the camshafts.

- Remove the center plugs for the variable valve timing units.

NOTE: Collect oil spills using paper under the plugs

- Remove the variable valve timing unit center screws
- Pull or work off the variable valve timing units and timing gear pulley.

Remove tool see **9995452** .

REMOVING THE THERMOSTAT HOUSING

Fig. 80: Removing/Installing Thermostat Housing
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the thermostat housing cable duct
- screws holding the thermostat housing to the cylinder head. Lift out the thermostat housing, gasket and cable duct
- the screw holding the inner timing cover to the cylinder head.

REMOVING THE CAMSHAFT COVER AND CYLINDER HEAD

Fig. 81: Removing/Installing Camshaft Cover/Cylinder Head
Courtesy of VOLVO CARS CORPORATION

- spark plugs for cylinders **2 and 5** . Install tool see **9995454** , 2 pcs., leave a **2-3 mm** gap to the camshaft cover. Make sure that the screw in the spark plug well is tightened completely.
- Variable valve timing solenoids
- the screws holding the camshaft cover to the cylinder head.

Fig. 82: Using Pliers 999 5670 To Lift Cover From Cylinder Head
Courtesy of VOLVO CARS CORPORATION

- Use pliers see **9995670** to lift the cover from the cylinder head. Apply the pliers at the stop lugs.
- Start with cylinder 1 and work alternately backward
- Slacken off the wing nuts approximately 2 turns
- Repeat the procedure with the pliers.

Fig. 83: Identifying Pressing Out Of Camshaft Seals
Courtesy of VOLVO CARS CORPORATION

Carefully press out the front and rear camshaft seals.

Remove the seals.

Fig. 84: Cylinder Head Screws Removal Sequence
Courtesy of VOLVO CARS CORPORATION

Remove:

- tools see **9995454**
- the camshaft cover

- the camshafts.

CAUTION: Mark up and position the lifters so that their original positions can be established.

Lift out the valve lifters.

Use a suction cup.

Position the valve lifters on a piece of paper to drain.

- Remove the screws holding the cylinder head on the cylinder block
- Start at the sides and work alternately towards the center (see the illustration)
- Get help to lift off the cylinder head.

NOTE: Do not damage the mating faces.

WHEN REPLACING OR WORKING ON THE CYLINDER HEAD

Remove:

- the intake manifold and gasket
- the coolant outlet pipe.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

NOTE: To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .

CLEANING THE GASKET FACES

Fig. 85: Cleaning Gasket Faces
Courtesy of VOLVO CARS CORPORATION

Clean the gasket faces for:

- the manifold. Check that the studs are tightened
- the coolant bypass channel
- the coolant outlet pipe
- the intake manifold
- the cylinder block
- camshaft cover.

Blow the oil ducts clean.

NOTE: Use a razor blade or a plastic gasket scraper and gasket solvent 1161 440 . Use a fume hood or extractor when using gasket solvent.

INSTALLING THE CYLINDER HEAD GASKET

CAUTION: Always use new gaskets where the joint has been broken.

ALIGNING THE CRANKSHAFT

Fig. 86: Identifying Crankshaft Stop Tool 999 5451
Courtesy of VOLVO CARS CORPORATION

- Remove the starter motor mounting screws. Pull out the starter motor and place to one side
- Remove the blind cover plug
- Turn the crankshaft slightly clockwise. Install crankshaft stop see **9995451** . Make sure that it bottoms out against the engine block.
- Turn the crankshaft counter-clockwise until it stops against the crankshaft stop
- Check that the marking on the crankshaft timing gear pulley corresponds with the marking on the oil pump.

INSTALLING THE CYLINDER HEAD

Fig. 87: Cylinder Head Screws Tightening Sequence
Courtesy of VOLVO CARS CORPORATION

Install a new cylinder head gasket.

Install the cylinder head.

Use **new screws** . Lubricate and install all the screws.

Tighten the screws in the order illustrated. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Follow the steps.

Use angle gauge see **9512050** .

INSTALLING VALVE LIFTERS AND CAMSHAFTS

Fig. 88: Identifying Intake And Exhaust Camshafts
Courtesy of VOLVO CARS CORPORATION

When installing a new cylinder head, the valve clearance must be set, see **VALVE CLEARANCE, SETTING / ADJUSTING** .

CAUTION: Make sure that the lifters are in the same position as before.

Lubricate the valve lifter wells and the lifters. Install all the valve lifters.

INSTALLING THE CAMSHAFTS

- Lubricate the camshaft bearing positions
- Install the intake camshaft. Ensure that the groove at the back of the camshaft is above an imaginary center line
- Position the exhaust camshaft. Ensure that the groove at the back of the camshaft is below an imaginary center line.

APPLYING LIQUID GASKET

Fig. 89: Applying Liquid Gasket To Camshaft Cover
Courtesy of VOLVO CARS CORPORATION

NOTE: Make sure that no liquid gasket gets into the oil channels.

- Install new O-rings around the spark plug wells at the cylinder head
- Apply liquid gasket **11 61 059** to the camshaft cover
- Use roller see **9512767** . The surface must be completely covered without any excess.

INSTALLING THE CAMSHAFT COVERS

Fig. 90: Removing/Installing Camshaft Cover/Cylinder Head
Courtesy of VOLVO CARS CORPORATION

- Lubricate the camshaft lobes, the camshaft bearing surfaces and the valve lifters
- Install the camshaft cover. Install press tool see **9995454** , 2 pcs.
- Tighten the camshaft cover screws alternately, keeping it parallel to the cylinder head using the press tools
- Install all the screws and tighten
- Install the variable valve timing solenoids using new gaskets
- Remove the press tools
- Install the spark plugs. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE REAR CAMSHAFT SEALS

Fig. 91: Rear Camshaft Seal
Courtesy of VOLVO CARS CORPORATION

- Use drift see **9995450** .
- Lubricate the surface of the seal that the camshaft rotates against
- Press in the seal until the drift bottoms out.

NOTE: **If there are wear grooves on the camshaft, the seal can be pressed in another 2 mm by reversing the tool's sleeve.**

SECURING THE CAMSHAFTS

Fig. 92: Camshaft Adjustment Tool 999 5452 At Rear Of Camshafts
Courtesy of VOLVO CARS CORPORATION

Use camshaft tool see **9995452** .

Separate the camshaft adjustment tool into two units.

CAUTION: The camshafts must not be turned more than is listed in the text below. The valves may be damaged.

- Install the exhaust camshaft section of the adjustment tool
- Screw into the rear edge of the camshaft
- Carefully turn the camshaft adjustment tool clockwise (as viewed from the back of the engine) until the camshaft adjustment tool is parallel with the join between the cylinder head and camshaft cover
- Install the intake camshaft section of the adjustment tool
- Screw into the rear edge of the camshaft
- Carefully turn the camshaft adjustment tool counter-clockwise until it is in contact with the exhaust camshaft section of the camshaft adjustment tool
- Screw the adjustment tool sections together into one
- Check that the screws retaining the adjustment tool to the camshafts and the screws holding the tool together are well tightened.

INSTALLING THE FRONT CAMSHAFT SEAL

Fig. 93: Identifying Front Camshaft Seal Tool 9995718
Courtesy of VOLVO CARS CORPORATION

- Use drift see **9995718** .
- Lubricate the surface of the seal that the camshaft rotates against
- Use the mounting screws for the variable valve timing unit
- Tighten the screws until the drift bottoms out.

INSTALLING THE THERMOSTAT HOUSING

Fig. 94: Removing/Installing Thermostat Housing
Courtesy of VOLVO CARS CORPORATION

Install:

- the screw holding the inner timing cover to the cylinder head
- the thermostat housing and cable duct. Use a new gasket
- the screw for the thermostat housing cable duct.

CHECKING THE TENSIONER PULLEY AND IDLER PULLEY

- Spin the idler pulley and listen for noise. If replacing with a new idler pulley, tighten to **24 Nm**
- Spin the tension pulley and listen for noise. When replacing, screw the tension pulley into place using the center screw. Screw in the center screw by hand
- Ensure that the tensioner fork is centered over the cylinder block rib / bracket. Ensure that the Allen hole on the eccentric is at **10 o'clock** .

INSTALLING THE VARIABLE VALVE TIMING (VVT) UNIT ON THE EXHAUST CAMSHAFT

Fig. 95: Identifying Pulley Marking 1 Cog Before Cover Marking
Courtesy of VOLVO CARS CORPORATION

- Slacken off, but do not remove the screws which secure the timing gear pulley to the VVT unit
- Press the variable valve timing unit and timing gear onto the camshaft
- Install the center screw which secures the variable valve timing unit to the camshaft. Tighten slightly
- Turn the variable valve timing unit counter-clockwise as far as it will go. Slacken off the center screw
- Position the upper timing cover
- Turn the timing gear pulley clockwise until the screws at the oval holes are in the limit position. Continue turning clockwise until the timing gear pulley marking is **1 cogs** before the marking on the upper timing cover.

NOTE: Do not turn counter-clockwise during this procedure.

- Check that the timing gear pulley is still in the limit position in the oval holes
- Tighten the center screw in the VVT unit. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Check that the variable valve timing unit does not rotate when tightening
- Install and tighten the centre plug according to **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Fig. 96: Identifying Camshafts And Crankshaft Markings
Courtesy of VOLVO CARS CORPORATION

Turn the variable valve timing unit clockwise to the limit position. Turn the timing gear pulley so that the markings correspond.

INSTALLING THE VARIABLE VALVE TIMING (VVT) UNIT ON THE INTAKE CAMSHAFT

Fig. 97: Identifying Pulley Marking 2 Cogs Before Cover Marking
Courtesy of VOLVO CARS CORPORATION

- Slacken off, but do not remove the screws which secure the timing gear pulley to the VVT unit
- Press the variable valve timing unit / timing gear onto the camshaft
- Install the center screw which secures the variable valve timing unit to the camshaft. Tighten slightly
- Turn the variable valve timing unit counter-clockwise as far as it will go
- Slacken off the center screw
- Turn the timing belt pulley clockwise until the screws at the oval holes are in the end-position. Continue turning clockwise until the timing belt pulley marking is **2 cogs** before the marking on the upper timing casing.

NOTE: Do not turn counter-clockwise during this procedure.

- Check that the timing gear pulley is still in the limit position in the oval holes
- Tighten the center screw in the VVT unit. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Check that the variable valve timing unit does not rotate when tightening
- Install and tighten the center plug. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Fig. 98: Identifying Camshafts And Crankshaft Markings
Courtesy of VOLVO CARS CORPORATION

Turn the variable valve timing unit clockwise to the limit position.

Turn the timing gear pulley so that the markings correspond.

FINISHING

Fig. 99: Identifying Timing Belt Routing
Courtesy of VOLVO CARS CORPORATION

Tighten the timing belt tensioner center screw. Tighten to **5 Nm** .

Install the timing belt in the following order:

- crankshaft
- the idler pulley
- intake cam
- exhaust cam
- water pump
- tension pulley.

The variable valve timing units do not have a return spring and are easily dislodged when reinstalling the timing

belt. Check that the markings correspond

NOTE: Adjust the timing belt pulleys so that the screws do not end up in an end-position in the oval holes.

PREPARATIONS FOR ADJUSTING THE TIMING BELT

Fig. 100: Identifying Needle Position At Varying Temperatures
Courtesy of VOLVO CARS CORPORATION

This adjustment is to be made with a cold engine. A suitable temperature is approximately **20 °C/68 °F** .

At a higher temperature, for example, with a warm engine or a higher ambient temperature, the needle is further to the right.

The illustration shows the position of the indicator at different engine temperatures.

ADJUSTING THE TIMING BELT

Hold the center screw secure and turn the belt tensioner eccentric clockwise until the tensioner indicator passes the marked position.

Turn the eccentric back so that the indicator reaches the marked position in the center of the window.

Remember to hold the center screw secure at the same time.

Hold the eccentric secure and tighten the center screw. Tighten to **25 Nm** .

Check that the indicator is in the correct position.

Check:

- that the timing gear pulley is not in the limit position in the oval holes
- the timing gear pulley so that the markings line up with the upper timing cover.

Tighten the screws for the timing gear pulleys. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

REMOVING TOOLS

Remove:

- the camshaft adjustment tools see **9995451**
- the crankshaft stop see **9995452**

Install the plug with a new blind cover plug. Tighten to **40 Nm** .

CHECKING THE MARKINGS AND BELT TENSION

Fig. 101: Identifying Camshafts And Crankshaft Markings
Courtesy of VOLVO CARS CORPORATION

- Press the timing belt to check that the indicator on the tensioner moves easily
- Position the upper timing cover
- Turn the crankshaft two turns. Check that the markings on the crankshaft timing gear pulley and the camshaft timing gear pulley match up with the markings on the oil pump and upper timing cover respectively
- Check that the indicator on the belt tensioner is within the marked position
- Remove the upper timing cover.

INSTALLING COMPONENTS

Fig. 102: Installing Components At Rear Of Cylinder Head
Courtesy of VOLVO CARS CORPORATION

Install:

- the trigger wheel.

CAUTION: Only fits one way, make sure you get it right

- the camshaft position (CMP) sensor housing
- the pipe screw for the water heated crankcase ventilation at the rear of the cylinder head. Use new seal washers. Tighten to **26 Nm** .

Fig. 103: View of Ignition Coils, Connectors and Ground Terminals
Courtesy of VOLVO CARS CORPORATION

Install:

- the ignition coils according to the earlier markings

- the connector for the engine coolant temperature sensor
- the connectors for the variable valve timing solenoids
- the screws for the **2 ground terminals** between ignition coils **1 and 2 and 5 and 6** .

INSTALLING COMPONENTS AT THE INTAKE MANIFOLD

Fig. 104: Installing Intake Manifold Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the starter motor
- the throttle body (TB) connector to the engine wiring
- the charge air pipe to the throttle body (TB). Tighten the clamp
- the brake vacuum hose to the intake manifold
- the pipe screws at the underside of the intake pipe for the water heated crankcase ventilation. Tighten to **26 Nm**
- the dip stick pipe onto the intake manifold.

INSTALLING THE FUEL RAIL

Fig. 105: Removing/Installing Fuel Rail
Courtesy of VOLVO CARS CORPORATION

- the fuel rail. Use **new screws** . Tighten to **10 Nm** . Press the quick-release connector for the fuel pressure line until it clicks
- the clamps that hold the injector wiring and the positive cable to the rear edge of the cylinder head
- the protective cover over the nozzle connectors
- the upper engine coolant hose to the cylinder head and radiator. Tighten the clamp.

INSTALLING THE INTAKE PIPE FOR THE COOLANT PUMP

Fig. 106: Viewing Coolant Pump Inlet Pipe
Courtesy of VOLVO CARS CORPORATION

NOTE: Apply thread sealant 1161 056 on the screws.

Install:

- the inlet pipe for the coolant pump to the cylinder head. Use a **new gasket**
- the screw which secures the coolant pump inlet pipe to the cylinder block
- The turbocharger (TC). See **TURBOCHARGER (TC), REPLACING** .

INSTALLING COMPONENTS

Fig. 107: Installing Identified Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the bracket for the torque rod
- the upper screw securing the automatic transmission dip stick pipe to the engine
- the ground strips between the right frame member and the cylinder head.
- the cable duct on the inside of the right suspension turret
- the front timing cover. See **TIMING COVER FRONT, REPLACING**
- expansion tank. Connect the connector to the coolant level sensor
- the hose to the expansion tank from the radiator. Secure the clamp and remove the lock grip pliers. Connect the connector to the ABS sensor
- the servo reservoir. Ensure that the hoses are correctly positioned.

Fig. 108: Identifying Plastic Hoses Between Turbocharger, Charge Air Cooler & Air Cleaner/Turbocharger
Courtesy of VOLVO CARS CORPORATION

Install:

- the upper timing cover
- the cover over the ignition coils
- the plastic intake pipe over the engine. Adjust and tighten the intake pipe at the turbocharger (TC). Tighten the clamps and mounting screws on the plastic pipe
- the plastic charge air pipe over the engine. Tighten the clamps and mounting screws
- the hose between the charge air cooler (CAC) and the plastic charge air pipe over the engine. Tighten the clamps
- the crankcase ventilation hose to the PTC resistor in the plastic intake pipe over the engine. Use a **new clamp**
- the connector for the PTC resistor
- the protective cover over the PTC resistor
- the EVAP hose to the plastic intake pipe
- the air cleaner (ACL) assembly
- the plastic intake pipe to the mass air flow (MAF) sensor. Tighten the clamp
- the connector to the mass air flow (MAF) sensor. Clamp the wiring at the front of the air cleaner (ACL)

- the turbocharger (TC) control valve to the mounting on the air cleaner (ACL)
- the blue marked hose and the turbocharger (TC) control system to the intake manifold
- the red marked hose and turbocharger (TC) control system to the charge air pipe
- the yellow marked hose and turbocharger (TC) control system to the pressure regulators
- the cross stay between the suspension turrets
- the suspension turret covers. Clamp the servo hose to the right mounting on the engine stabilizer brace
- the battery negative lead. Also read, see **BATTERY, DISCONNECTING** .

CHECKING AND TOPPING UP

Replace the oil and oil filter if necessary.

Check:

- the engine oil level
- the servo oil level
- the coolant level.

Warm up the engine until the thermostat opens.

Check:

- the engine for leaks
- the oil level in the transmission
- the coolant level.

Top up if necessary.

CYLINDER HEAD (B8444S; 2005-2011)

CYLINDER HEAD/GASKET, CYLINDER 1, 3, 5 AND 7 (BANK 1), REPLACING

Special tools	
	T9512050 PROTRACTOR **Tool number:** T9512050 **Tool description:** PROTRACTOR **Tool boards:** EU14-1; SV14-1; US14-1

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

Disconnect the battery negative cable. See: **BATTERY, DISCONNECTING** .

This work requires that the vehicle be raised. See **JACKING POINTS, BODY** .

Remove:

- the VVT units. See: **VVT UNIT, RIGHT CYLINDER HEAD** and **VVT UNIT, LEFT CYLINDER HEAD**
- the engine cooling fan (FC). See **ENGINE COOLING FAN (FC), REPLACING**
- the temperature sensor, see: **TEMPERATURE SENSOR ENGINE COOLANT, REPLACING** .

EXPOSING

EXPOSING THE CYLINDER HEAD, CYLINDERS 1, 3, 5 AND 7 (BANK 1)

Remove:

- the hose clamp for the upper coolant hose, place the coolant hose to one side.
- the 2 x connectors for the camshaft position (CMP) sensors

Fig. 109: Removing The Coolant Hoses
Courtesy of VOLVO CARS CORPORATION

Remove the coolant hoses and place them to one side.

Fig. 110: Removing The 2 X M8 Upper Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x M8 upper screws holding the water pump.

Fig. 111: Locating Water Outlet Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the M8 screw.
- the 2 x M8 nuts
- 2 x M8 studs.

REMOVING THE MANIFOLD

Fig. 112: Install The 2 Bracket Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x M8 screws holding the bracket to the manifold.

Fig. 113: Removing/Installing The 8 X M8 Nuts
Courtesy of VOLVO CARS CORPORATION

Remove the 8 x M8 nuts holding the flanged joint to the manifold. Discard the gasket.

REMOVAL

WHEN REPLACING OR WORKING ON THE CYLINDER HEAD

Lift out the lifters using a magnet or suction cup. Note positions.

NOTE: Do not damage the mating surfaces.

REMOVING THE CYLINDER HEAD

remove

- the 10 x M12 screws
- the cylinder head. Discard the gasket.
- the gasket in the coolant's "bypass channel".

NOTE: Do not damage the mating surfaces.

CLEANING

Clean and check the gasket faces for:

- the coolant bypass channel
- the intake manifold
- the cylinder block
- camshaft cover.

Carefully blow the oil ducts clean.

INSTALLATION

NOTE: for tightening torques, see:TIGHTENING TORQUE

INSTALLING THE CYLINDER HEAD

Fig. 114: Apply sealing compound 307 57050
Courtesy of VOLVO CARS CORPORATION

NOTE: Check that all studs at the exhaust ports are tightened.

Install:

- a new manifold gasket. Lubricate the studs using paste: 116 1408
- a new cylinder head gasket. Apply sealing compound 307 57050 to both sides. See the illustration.
- the cylinder head
- lubricated screws, use **new** screws.

Tighten the screws in a circle from the inside and outwards. Use protractor: see **9512050** . Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE VALVE LIFTERS

NOTE: If the cylinder head has been replaced, the valve clearance must be adjusted. See VALVE CLEARANCE, SETTING/ADJUSTING .

Lubricate and install all the valve lifters. For correct location, see earlier notes.

INSTALLING THE MANIFOLD

NOTE: To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .

Fig. 115: Removing/Installing The 8 X M8 Nuts
Courtesy of VOLVO CARS CORPORATION

Install:

- a **new** gasket
- the exhaust manifold
- the **new** nuts, x 8. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Fig. 116: Install The 2 Bracket Bolts
Courtesy of VOLVO CARS CORPORATION

Install the 2 x M8 screws for the bracket.

INSTALLING COMPONENTS

Install:

- the M8 screw.
- the 2 x M8 nuts
- the 2 x M8 studs. Tighten
- the upper 2 x M8 screws for the water pump.
- 2 x coolant hoses. Tighten the hose clamps
- the upper coolant hose. Tighten the hose clamp

Install:

- the VVT units. See: and, see **VVT UNIT EXHAUST CAMSHAFT, REPLACING**
- the engine cooling fan (FC). See **ENGINE COOLING FAN (FC), REPLACING**
- the temperature sensor. See: **INSTALLATION** .

CYLINDER HEAD/GASKET, CYLINDER 2, 4, 6 AND 8 (BANK 2), REPLACING

Special tools	
	T9512050 PROTRACTOR **Tool number:** T9512050 **Tool description:** PROTRACTOR **Tool boards:** EU14-1; SV14-1; US14-1

NOTE: **As the illustrations in this service information are used for different model years**

and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

Disconnect the battery negative cable. See: **BATTERY, DISCONNECTING** .

This work requires the vehicle to be raised. See:

see **JACKING POINTS, BODY** .

EXPOSING

REMOVING THE VARIABLE VALVE TIMING (VVT) UNIT

Remove the VVT units. See: **VVT UNIT, RIGHT CYLINDER HEAD** and **VVT UNIT, LEFT CYLINDER HEAD** .

REMOVING COMPONENTS

Remove the cable harness from the engine bracket by opening the catches for the mounting.

Remove:

- the connector for the camshaft position sensor
- the vacuum valve, place to one side.

Fig. 117: Identifying The Hose Clip
Courtesy of VOLVO CARS CORPORATION

Remove the hose clip for the coolant hose.

Fig. 118: Identifying Heat Shield
Courtesy of VOLVO CARS CORPORATION

Remove:

- the M6 screw.
- the heat shield.

Fig. 119: Removing Alternator Upper Mounting Screw
Courtesy of VOLVO CARS CORPORATION

Remove the M8 upper mounting screw for the alternator.

REMOVING THE MANIFOLD

- the catalytic converter. See : **REMOVAL**

Fig. 120: Remove (2) Bracket Screws
Courtesy of VOLVO CARS CORPORATION

Remove the screws, 2 x M8

Fig. 121: Remove the 8 x Manifold Nuts
Courtesy of VOLVO CARS CORPORATION

Remove the 8 x M8 nuts. Discard the gasket.

REMOVAL

REMOVING THE CYLINDER HEAD

When replacing/working on the cylinder head. Lift out the valve lifters. Use a magnet or suction cup. Note

location.

NOTE: **Be careful so that the contact faces of the parts are not damaged.**

Remove:

- the 10 x M12 screws
- the cylinder head. Discard the gasket.

CLEANING

Clean and check the gasket faces for:

- the coolant bypass channel
- the intake manifold
- the cylinder block
- camshaft cover.

NOTE: **Blow the oil ducts clean.**

INSTALLATION

NOTE: **For tightening torques, see: TIGHTENING TORQUE .**

INSTALLING THE CYLINDER HEAD

NOTE: **Check that all studs at the exhaust ports are tightened. See: SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS .**

Fig. 122: Apply sealing compound 307 57050
Courtesy of VOLVO CARS CORPORATION

Install new manifold gasket.

Lubricate the studs with paste, part no. 116 1408.

Install:

- new cylinder head gasket. Apply sealing compound 307 57050 on both sides. See the illustration.
- the cylinder head
- lubricated screws, use new screws.

Tighten the screws in a circle from the inside and outwards. Use protractor: see **9512050** . Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE VALVE LIFTERS

NOTE: If the cylinder head has been replaced, the valve clearance must be adjusted. See VALVE CLEARANCE, SETTING/ADJUSTING .

Install:

- lubricate and install all the valve lifters. For correct location, see earlier notes.

INSTALLING THE MANIFOLD

Fig. 123: Remove the 8 x Manifold Nuts
Courtesy of VOLVO CARS CORPORATION

Install:

- a new gasket
- new nuts, 8 x M8.

Fig. 124: Identifying Bracket
Courtesy of VOLVO CARS CORPORATION

Install:

- the 2 x M8 screws
- the three-way catalytic converter. See: **INSTALLATION** .

INSTALLING COMPONENTS

Install:

- the heat shield
- the connector for the camshaft position sensor
- secure the cable harness on the engine bracket using the catches for the mounting.
- the connector for the camshaft position sensor
- the vacuum valve
- the hose clip for the coolant hose.

INSTALLING VVT-UNITS

Install the VVT units. See: **VVT UNIT EXHAUST CAMSHAFT, REPLACING** .

VALVE COVER/GASKET, REPLACING

Remove the power steering pump. See **POWER STEERING PUMP, REPLACING**

Remove the intake manifold. See **INJECTORS/PULSATION DAMPERS, REPLACING** .

Fig. 125: Identifying Induction Pipe
Courtesy of VOLVO CARS CORPORATION

Induction pipe. See **TIGHTENING TORQUE**

VALVE COVER LEFT.

Fig. 126: View Of Valve Cover Left
Courtesy of VOLVO CARS CORPORATION

M6. See **TIGHTENING TORQUE**

To install, reverse the removal procedure.

DRIVE TRAIN (B6294T; 2003-2006)

CAMSHAFT SEAL/VARIABLE VALVE TIMING (VVT) UNIT, REPLACING

REMOVING THE FRONT CAMSHAFT SEAL

NOTE: **The illustrations in this service information are used for different model years and / or models. Therefore there may be some variation. However, the essential information in the illustrations is always correct.**

CAUTION: There are a number of versions of the variable valve timing unit. Therefore it is extremely important to always read the information referring to the engine variant/model year to be remedied.

REPLACING THE REAR CAMSHAFT SEAL

See **REMOVAL AND INSTALLATION**.

PREPARATION

Interrupt the current: Disconnect the battery negative lead. First read, see **BATTERY, DISCONNECTING** .

Remove the timing belt from the timing gear pulley for the camshafts. See **TIMING BELT, REPLACING**. Check the tensioner and idler pulleys. See **TIMING BELT, REPLACING**.

Remove the camshaft position (CMP) sensor housings and the trigger wheels.

REMOVING THE VARIABLE VALVE TIMING UNIT / TIMING GEAR PULLEY

Fig. 137: Camshaft Adjustment Tool 999 5452 Installed
Courtesy of VOLVO CARS CORPORATION

Install adjustment tool see **9995452** at the rear of the camshafts. Screw the adjustment tool sections together into one.

Remove:

- The center plugs for the variable valve timing units (Tx55)
- The center screws for the variable valve timing units (Tx55). Pull or work off the variable valve timing units and timing gear pulleys.

REMOVING THE FRONT CAMSHAFT SEAL

Fig. 138: Identifying Seal And Special Tool 999 5651
Courtesy of VOLVO CARS CORPORATION

Carefully press in tool see **9995651** between the seal and the camshaft. Pry out the seal.

INSTALLING THE FRONT CAMSHAFT SEAL

NOTE: **The purpose of the section, "Installing the VVT unit/timing gear pulley", described here is to ensure that the VVT unit is correctly positioned and to reset the camshaft timing gear pulley to the correct position using the markings made at the factory. This is to ensure that the conditions are correct for any later fault-tracing.**

NOTE: **For tightening torques, see: TIGHTENING TORQUE .**

CLEANING

To clean the shaft journal and mating surface, use emery cloth P/N 951 1024.

NOTE: **When cleaning work around the shaft journal, not in and out. It is essential that any residue from the emery cloth and any other contaminants are completely removed before the new sealing ring is installed.**

INSTALLING THE FRONT CAMSHAFT SEAL

9995718

Fig. 139: Installing Drift 999 5718
Courtesy of VOLVO CARS CORPORATION

Lubricate the surface of the seal that the camshaft rotates against.

Install the camshaft seal. Use drift see **9995718** . Use the mounting screw for the variable valve timing unit. Tighten until the drift bottoms out.

CHECKING AND ADJUSTING THE VARIABLE VALVE TIMING UNIT

Check and adjust the variable valve timing unit. See: **VARIABLE VALVE TIMING UNIT, CHECKING AND ADJUSTING** .

CHECKING THE MARKINGS AND BELT TENSION

Fig. 140: Checking Timing Belt Tension
Courtesy of VOLVO CARS CORPORATION

Press the timing belt to check that the indicator on the tensioner moves easily. Position the upper timing cover.

Turn the crankshaft 2 **rotations** and check that the markings on the crankshaft and timing gear pulleys correspond. Check that the indicator on the belt tensioner is within the marked position. Remove the upper timing cover.

Install:

- the starter motor. Tighten screws at gearbox. Tighten. See **TIGHTENING TORQUE**
- the trigger wheel. Tighten the screw
- the camshaft position (CMP) sensor housing. Tighten the screws
- the new cover in the rear edge of the camshaft

- the intake pipe between the charge air cooler (CAC) and the electronic throttle module (ETM).

FINISHING

Install the auxiliaries belt around the pulley on the crankshaft.

Install:

- the plastic nuts for the hatch in the right wing liner
- the right front wheel. See **INSTALLING WHEELS** .

Fig. 141: Expansion Tank And Servo Reservoir
Courtesy of VOLVO CARS CORPORATION

Install the front timing cover. See **TIMING COVER FRONT, REPLACING** .

Tension the auxiliaries belt. Check that it is correctly positioned on all pulleys.

Install:

- the expansion tank
- the hose between the expansion tank and the radiator. Remove the lock grip pliers
- the servo reservoir
- the upper timing cover.

Twist the intake pipe for the turbocharger for cylinders 1, 2 and 3 into position. Tighten the clamp. Install the plastic hoses between the turbocharger (TC) and the charge air cooler and between the air cleaner (ACL) and the turbocharger (TC). Tighten the hose clamps.

Fig. 142: Engine And Stabilizer Brace
Courtesy of VOLVO CARS CORPORATION

Install:

- the engine stabiliser brace. Tighten the screws
- the screw holding the engine stabiliser brace to the bracket on the engine. Tighten
- the battery negative lead. Also read, see **BATTERY, DISCONNECTING** .

FINAL CHECK

Check and top up if required:

- coolant level
- the servo fluid level. Test drive the engine.

REMOVAL AND INSTALLATION

PREPARATION

Fig. 143: Engine And Stabilizer Brace
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw holding the engine stabiliser brace to the bracket on the engine
- the screws holding the engine stabiliser brace to the suspension turrets
- the engine stabiliser brace
- the air cleaner (ACL) cover. Place it to one side
- the camshaft position (CMP) sensor housing and the trigger wheel.

REMOVING THE REAR CAMSHAFT SEAL

Fig. 144: Identifying Special Tool Extractor 999 5919
Courtesy of VOLVO CARS CORPORATION

Pull out the seal. Use puller see **9995919** . Use emery cloth 951 1024 to clean the shaft journal and mating surface.

NOTE: **When cleaning work around the shaft journal, not in and out. It is essential that any residue from the emery cloth and any other contaminants are completely removed before the new sealing ring is installed.**

Lubricate the surface of the seal that the camshaft rotates against. Install the camshaft seal. Use drift see **9995450** .

NOTE: The seal is normally positioned at the same level as the internally bevelled edge. If the shaft journal is showing signs of wear, the seal can be pressed in a further 2 mm : Turn the drift socket.

FINISHING

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Fig. 145: Engine And Stabilizer Brace
Courtesy of VOLVO CARS CORPORATION

Install:

- the trigger wheel. Tighten the screw
- the camshaft position (CMP) sensor housing. Tighten the screws
- the air cleaner (ACL) cover
- the engine stabiliser brace. Tighten the screws
- the screw holding the engine stabiliser brace to the bracket on the engine. Tighten.

Test drive the engine.

REPLACING THE ACCESSORY DRIVE BELT / BELT TENSIONER

NOTE: Removal steps in this procedure may contain installation details.

PREPARATION

Fig. 146: Pinching Expansion Tank Hose
Courtesy of VOLVO CARS CORPORATION

Lift up servo reservoir and place on top of engine.

NOTE: Ensure that no oil leaks out of the ventilation hole in the cover.

Remove the cover and surround for the distribution box.

Fig. 147: Removing Auxillary Belt
Courtesy of VOLVO CARS CORPORATION

Use a **14 mm** spanner and turn clockwise as far as possible to relieve the load.

Lift off the belt.

REMOVING THE AUXILIARIES BELT

Fig. 148: Identifying Vibration Damper Screws, Counterhold And Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Raise the vehicle and remove

- the right front wheel
- the plastic nuts from the cover in the wing liner
- the outer section on the oscillation damper. Use the crankshaft's center nut as a counterhold.
- the auxiliaries belt

Tighten, see **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**

REMOVING THE BELT TENSIONER

Fig. 149: Removing The Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

Remove the following items:

- the protective cover above the screw
- screw, belt tensioner
- support reel

Tighten, see **TIGHTENING TORQUE**

REMOVING THE BELT TENSIONER

Fig. 150: Belt Tensioner Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove belt tensioner mounting screws from auxiliaries belt bracket.

Remove the belt tensioner.

Install a new belt tensioner.

Tighten, see **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**

To install, reverse the removal procedure.

REPLACING THE VARIABLE VALVE TIMING SOLENOID

NOTE: **The illustrations in this service information are used for different model years and / or models. Therefore there may be some variation. However, the essential information in the illustrations is always correct.**

PREPARATIONS

Fig. 151: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

Applies only to B6xx4T

Remove the plastic pipes between the turbocharger (TC) and charge air cooler (CAC) and between the air cleaner (ACL) and the turbocharger (TC).

Put them to one side.

Slacken off the clamp for the intake manifold at the turbocharger (TC) for cylinders 1, 2 and 3. Turn the upper section of the manifold towards the firewall.

REMOVING THE VARIABLE VALVE TIMING SOLENOID

Fig. 152: Identifying Upper Timing Belt Cover
Courtesy of VOLVO CARS CORPORATION

Remove the upper timing belt cover.

NOTE: **Clean the area around the variable valve timing (VVT) solenoid thoroughly to avoid contaminated oil entering the ducts / the variable valve timing (VVT) unit.**

Remove:

- the connector for the check valve
- the screws holding the valve
- the control valve and the gasket.

INSTALLING THE VARIABLE VALVE TIMING SOLENOID

Clean the gasket faces. Note the cleanliness requirements above.

Install a new gasket.

Install:

- a new check valve Tighten the control valve crosswise. Tighten to **10 Nm**

- the connector
- the upper timing belt cover.

FINISHING

Fig. 153: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

Applies only to B6xx4T

Turn back the intake manifold for the turbocharger (TC) for cylinders 1, 2, 3 and tighten the clamp.

Install the plastic hoses between the turbocharger (TC) and the charge air cooler and between the air cleaner (ACL) and the turbocharger (TC).

Tighten the hose clamps.

TIMING BELT, REPLACING

Special tools:

see **9995433**

see **9995456**

REMOVAL

NOTE: **Since the illustrations in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 154: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

CAUTION: Remove the ignition key.

Remove:

- the screw holding the engine stabiliser brace to the bracket on the engine
- the screws holding the engine stabiliser brace to the suspension turrets
- the engine stabiliser brace.

Remove the plastic pipes between the turbocharger (TC) and charge air cooler (CAC) and between the air cleaner (ACL) and turbocharger (TC). Put them to one side.

Remove the clamp from the intake manifold for the turbocharger (TC) for cylinders 1, 2 and 3. Turn the upper section of the pipe towards the bulkhead.

Fig. 155: Pinching Expansion Tank Hose
Courtesy of VOLVO CARS CORPORATION

Relieve the load from the belt tensioner. Remove the auxiliaries belt.

Remove the upper timing belt cover.

Remove the front timing belt cover. See **TIMING COVER FRONT, REPLACING** .

Lift up the servo reservoir and place it on top of the engine.

NOTE: Ensure that the power steering oil does not leak from the breather hole in the filler cap.

Seal the hose between the expansion tank and the radiator. Disconnect the hose at the tank.

Lift up the expansion tank and place it on top of engine.

Fig. 156: Crankshaft And Camshafts Markings
Courtesy of VOLVO CARS CORPORATION

Raise the car.

Remove:

- the right front wheel

- the plastic nuts on the cover in the wing liner.

Install the upper timing belt cover.

Turn the crankshaft clockwise until the markings on the crankshaft and camshaft pulleys correspond.

Turn the crankshaft a further 1/4 turn clockwise.

Then turn back counter-clockwise until the markings correspond.

Remove the upper timing belt cover.

Fig. 157: Identifying Vibration Damper Screws, Counterhold And Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Remove the 4 vibration damper screws. Counterhold the crankshaft central nut.

Remove:

- the vibration damper
- the auxiliaries belt
- the belt cover behind the crankshaft pulley for the auxiliaries belt.

Spray universal oil or similar around the rubber sleeve on the underside of the oil pump.

Remove the rubber sleeve.

REMOVING THE TIMING BELT

Fig. 158: Identifying Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

Slacken off the belt tensioner

Slacken off the centre screw for the belt tensioner slightly.

Hold the centre screw still. Turn the tensioner eccentric **counter-clockwise** using a 6 mm Allen key. Turn to 10 o'clock.

Unhook and remove the timing belt.

NOTE: The component can be reused unless it has been subjected to abnormal mechanical stress, damage or oil contamination.

CAUTION: The crankshaft or camshafts must not be rotated while the timing belt is removed.

CHECKING THE TENSIONER PULLEY AND IDLER PULLEY

Check bearing wear:

Spin the idler pulley and listen for noise. If replacing with a new idler pulley, tighten to **24 Nm** .

Spin the tension pulley and listen for noise. When replacing, screw the tension pulley into place using the centre screw.

Screw in the centre screw by hand.

Ensure that the tensioner fork is centred over the cylinder block rib / bracket.

Ensure that the Allen hole on the eccentric is at 10 o'clock.

INSTALLATION

INSTALLING THE TIMING BELT

Fig. 159: Identifying Timing Belt Routing
Courtesy of VOLVO CARS CORPORATION

NOTE: **The component can be reused unless it has been subjected to abnormal mechanical stress, damage or oil contamination.**

Install the belt in the following order:

- crankshaft
- the idler pulley
- intake cam
- exhaust cam
- water pump
- tension pulley.

TENSIONING THE TIMING BELT

Fig. 160: Identifying Needle Position At Varying Temperatures
Courtesy of VOLVO CARS CORPORATION

This adjustment is done with a cold engine. Suitable temperature is approximately 20 ° C/ 68 ° F.

At a higher temperature, for example with a warm engine or a higher ambient temperature, the needle is farther to the right.

The illustration shows the position of the indicator when aligning the timing belt tensioner at different temperatures.

Carefully turn the crankshaft clockwise until the timing belt is tensioned. The belt must be in tension between the intake camshaft pulley, the idler pulley and the crankshaft.

Hold the belt tensioner centre screw secure. Turn the belt tensioner eccentric **clockwise** until the tensioner indicator passes the marked position.

Then turn the eccentric back so that the indicator reaches the marked position in the centre of the window.

Hold the eccentric secure. Tighten the centre screw to **25 Nm.**

Check that the indicator is in the correct position.

CHECK

Fig. 161: Checking Timing Belt Tension
Courtesy of VOLVO CARS CORPORATION

Press the belt to check that the indicator on the tensioner moves easily.

Install the upper timing belt cover.

Turn the crankshaft 2 turns. Check that the markings on the crankshaft and camshaft pulley correspond.

Check that the indicator on the belt tensioner is within the marked area.

FINISHING

Fig. 162: Identifying Vibration Damper Screws, Counterhold And Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Install the auxiliaries belt around the pulley on the crankshaft.

Install

- the rubber sleeve on the underside of the oil pump
- the vibration damper. Use **new screws** . Tighten and angle tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Use the crankshaft centre nut as a counterhold
- the plastic nuts for the cover in the right-hand wing liner
- the right front wheel. See **INSTALLING WHEELS** .

Fig. 163: Expansion Tank And Servo Reservoir
Courtesy of VOLVO CARS CORPORATION

Lower the car.

- Remove the front timing belt cover. See

see **INSTALLING THE FRONT TIMING COVER** .

Tension the auxiliaries belt.

- the expansion tank
- the hose between the expansion tank and the radiator. Remove the lock grip pliers
- the servo reservoir
- the upper timing belt cover.

Twist the intake pipe for the turbocharger for cylinders 1, 2 and 3 into position. Tighten the clamp.

Install the plastic hoses between the turbocharger (TC) and charge air cooler (CAC) and between the air cleaner (ACL) and turbocharger (TC).

Tighten the hose clamps.

Fig. 164: Engine And Stabilizer Brace
Courtesy of VOLVO CARS CORPORATION

- the engine stabiliser brace. Tighten to **50 Nm**
- the screw holding the engine stabiliser brace to the bracket on the engine. Tighten to **80 Nm** .

FINAL CHECK

Check and top up if required

- coolant level
- the servo fluid level.

Test run the engine .

ENGINE MOUNTING (2003-2012)

BUSHING SUB-FRAME, REPLACING (2003-2008)

Special tools:

see **9995575**

see **9995576**

see **9512564**

see **9997018**

see **9997070**

see **9995716**

see **9995460**

see **9995185**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

IMPORTANT INFORMATION

Fig. 165: Identifying Left-Hand Rear Bushing
Courtesy of VOLVO CARS CORPORATION

CAUTION: **The left-hand rear bushing on the sub-frame is a different version to the other three bushings. The hole in the centre of the bushing is oval. The oval must be positioned front-rear with the car.**

HINT: Carry out work using see 9995575 together with see 9995576 or see 9512564 .

PREPARATORY WORK

Remove the engine cover.

Fig. 166: Installed Lifting Eye
Courtesy of VOLVO CARS CORPORATION

Applies only to six cylinder engines:

Install lifting eye see **9997018** on the left side of the engine at the 2 screws.

Lock the lifting lug using the catch.

Fig. 167: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Installing the lifting beams and lifting hooks on the engine lifting lugs.

NOTE: The front lifting beam must be equipped with fixture kit see 9997070 as illustrated.

Position lifting beam see **9995716** on the wheel arch and directly above the engine lifting eyelets on the left and right-hand sides.

Connect lifting hooks see **9995460** on the lifting lugs on the right-hand side of the engine with a clearance of 10 mm.

Applies only to the T6:

Also use lifting lug see **9995185** on the left-hand side of the engine.

Tighten to light contact on the left hand side.

Fig. 168: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front wheels
- the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 169: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 170: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

REMOVING COMPONENTS

Fig. 171: Identifying Screw For Cable Duct
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the cable duct
- evacuation pipe mounting for the control module box from the sub-frame.

REMOVING THE LOWER SCREW FROM THE FRONT ENGINE PAD

Fig. 172: Front Engine Pad Lower Screw
Courtesy of VOLVO CARS CORPORATION

Remove the lower screw for the front engine pad.

REMOVING THE LOWER TORQUE ROD

Fig. 173: Identifying Torque Rod To Engine Screws
Courtesy of VOLVO CARS CORPORATION

Remove 4 screws from the lower torque rod (A).

Fig. 174: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the torque rod screws.

REMOVING THE VIBRATION DAMPER (6-CYLINDER ENGINES ONLY)

Fig. 175: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Remove the four vibration damper screws. Counterhold the crankshaft central nut.

Remove:

- the vibration damper
- the auxiliaries belt.

REMOVING THE SCREWS FOR THE RIGHT-HAND ENGINE MOUNTING

Fig. 176: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove the screws holding the right-hand engine mounting in the engine.

REMOVING THE NUTS AND SCREW FOR THE STEERING GEAR

Fig. 177: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the four nuts and the screw holding the steering gear
- the nut (A), holding the lower half of the collision protection system. **(Applies only to right-hand drive cars)** .

REMOVING THE DELIVERY LINE FOR THE STEERING GEAR

Fig. 178: Identifying Oil Pipe And Clamps For Steering Gear
Courtesy of VOLVO CARS CORPORATION

Remove the delivery line for the steering gear from the snap fastener on the sub-frame. Remove any fuel line to the engine block heater.

LOWERING THE SUB-FRAME

Fig. 179: Identifying Lifting Table, Sub-Frame Brackets, Screws And Washers
Courtesy of VOLVO CARS CORPORATION

Remove and hang the engine block heater (if applicable) on the left front mounting for the sub-frame.

Remove the fuel line for the engine block heater (if applicable) on the sub-frame from the snap fasteners.

Position a lifting table under the sub-frame.

Apply the lifting table so that the load is taken off the sub-frame screws.

Remove the sub-frame screws together with the accompanying brackets and washers.

Carefully lower the sub-frame approximately 50 mm.

NOTE: Ensure that the steering gear screws release from the sub-frame.

Fig. 180: Identifying Heated Oxygen Sensor (HO2S) Connector
Courtesy of VOLVO CARS CORPORATION

Remove the bracket for the heated oxygen sensor (HO2S) from the sub-frame.

Remove the heated oxygen sensor's wiring from the right side of the **sub-frame (only applies to 6 cylinder engines)** .

Lower the sub-frame a further 40 mm.

PRESSING OUT THE BUSHINGS

Fig. 181: Identifying Special Tools To Press Bushings
Courtesy of VOLVO CARS CORPORATION

Install the hydraulic tool and press sleeve as illustrated.

Press the bushings out of the sub-frame, see the following illustration.

NOTE: It is arbitrary which of tools see 9995575 , see 9995576 and see 9512564 is used.

MARKING FOR THE BUSHING ON THE SUB-FRAME

Fig. 182: Identifying Marking For The Bushing On The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Clean the hole for the bushing in the sub-frame.

Press out the bushing by hand.

CAUTION: The markings on the bushing and sub-frame must be positioned opposite each other.

MARKING THE LEFT-HAND REAR BUSHING

Fig. 183: Identifying Left-Hand Rear Bushing
Courtesy of VOLVO CARS CORPORATION

NOTE: The left-hand rear bushing on the sub-frame is a different version to the other three bushings. The hole in the center of the bushing is oval. The oval must be positioned lengthways to the car, as illustrated.

CAUTION: The markings on the bushing and sub-frame must be positioned opposite each other.

PRESSING IN THE BUSHINGS

Fig. 184: Identifying Special Tools To Press Bushings
Courtesy of VOLVO CARS CORPORATION

Install the hydraulic tool and press sleeve as illustrated.

Fig. 185: Identifying Bushings & Sub-Frame Assembly
Courtesy of VOLVO CARS CORPORATION

Press the bushings into the sub-frame, see the following illustration.

NOTE: It is arbitrary which of tools see 9995575 , see 9995576 and see 9512564 is used.

INSTALLING THE WIRING FOR THE HEATED OXYGEN SENSOR (HO2S)

Fig. 186: Identifying Heated Oxygen Sensor (HO2S) Connector
Courtesy of VOLVO CARS CORPORATION

Lift up the sub-frame slightly (approximately 50 mm from the car body).

Install the bracket for the heated oxygen sensor (HO2S) on the sub-frame.

Install the heated oxygen sensor (HO2S) wiring on the right hand side of the sub-frame (**applies to 6- cylinder engines only**).

LIFTING THE SUB-FRAME

Fig. 187: Identifying Lifting Table, Sub-Frame Brackets, Screws And Washers
Courtesy of VOLVO CARS CORPORATION

Lift the sub-frame up completely.

At the same time locate the mounting screws for the steering gear on the sub-frame.

Loosely install the sub-frame brackets together with the washers.

Install the four screws for the sub-frame. Use new screws. **Do not tighten yet** .

First tighten the screws on the left side of the sub-frame. Tighten to **105 Nm** . Angle tighten to **120°** . Then tighten the right-hand side to the same value as the left side

Finally tighten the bracket screws. Tighten to **50 Nm** . Install the engine block heater (if applicable) on the left front mounting for the sub-frame.

CAUTION: Tighten the left-hand side first. The sub-frame guides are on the left-hand side.

INSTALLING THE NUTS AND SCREW FOR THE STEERING GEAR

Fig. 188: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Install the four nuts and the screw holding the steering gear. Use new nuts and a new screw. Tighten to **50 Nm** .

Applies to right-hand drive cars:

Install nut (A), holding the lower half of the collision protection. Tighten to **50 Nm** .

INSTALLING THE DELIVERY LINE FROM THE STEERING GEAR

Fig. 189: Identifying Pipes and Screw Clips
Courtesy of VOLVO CARS CORPORATION

Install the delivery line from the steering gear on the mountings on the sub-frame. Install any fuel line for the engine block heater.

INSTALLING THE SCREWS FOR THE ENGINE MOUNTING TO THE ENGINE

Fig. 190: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Reinstall the screws holding the engine mounting to the engine. Tighten to **35 Nm** . Angle-tighten **90°** .

NOTE: Use new screws.

INSTALLING THE VIBRATION DAMPER (6-CYLINDER ENGINES ONLY)

Fig. 191: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Install the vibration damper using new screws. Tighten to **35 Nm** . Angle-tighten **50°** .

Use the crankshaft center nut as a counterhold.

TIGHTENING THE SCREWS FOR THE LOWER TORQUE ROD

Fig. 192: Identifying Torque Rod To Engine Screws
Courtesy of VOLVO CARS CORPORATION

Tighten the 4 screws (A) for the lower torque rod. Tighten to **50 Nm** .

INSTALLING THE SCREW FOR THE FRONT ENGINE PAD

Fig. 193: Front Engine Pad Lower Screw
Courtesy of VOLVO CARS CORPORATION

Install the front engine pad screw. Tighten to **50 Nm** .

See Sub frame, adjustment:**SUBFRAME, ADJUSTING**

INSTALLING THE PROTECTIVE COVER

Fig. 194: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Install the splashguard under the engine.

REMOVING LIFTING TOOLS

Remove:

- lifting tool see **9995716** with supplementary kit see **9997070** .
- lifting hooks see **9995460** .

Applies only to the T6:

Remove:

- lifting eye see **9995185**
- lifting eye see **9997018** .

FINISHING

Install the wheels, see **INSTALLING WHEELS** .

Install the engine cover.

REPLACING THE TORQUE ROD

REMOVAL

REMOVING THE TORQUE ROD

Fig. 195: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Remove

- the screw for the torque rod mounting in the torque control arm and bracket on the engine
- the screws at the suspension turrets
- the torque rod.

Fig. 196: Identifying Torque Rod And Brackets
Courtesy of VOLVO CARS CORPORATION

Transfer

- the brackets (A) on the left and right-hand sides to the new torque rod. Do not tighten yet.

INSTALLATION

INSTALLING THE TORQUE ROD

Fig. 197: Identifying Torque Rod And Bolts With Torque Specifications
Courtesy of VOLVO CARS CORPORATION

Install

- the torque rod
- the screws for the brackets at the suspension turrets. Tighten to **50 Nm** .
- the screw and nut for the torque rod mounting in the torque control arm/bracket on the engine. Tighten to **85 Nm** .

Tighten the torque rod to the brackets to **85 Nm** .

ENGINE MOUNTING (B5254T2; 2003-2007)

ENGINE PAD FRONT, REPLACING

Special tools:

see **9995716**

see **9995460**

see **9997070**

NOTE: As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATION

Remove the protective cover over the engine.

REMOVING THE AIR INTAKE

Fig. 198: Removing The Air Intake
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 screws
- the air intake.

INSTALLING LIFTING TOOLS

Fig. 199: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Install lifting tool see **9995716** converted with kit see **9997070** . Install lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

REMOVING THE LOWER ENGINE PAD SCREW

Fig. 200: Locating Lower Engine Pad Bolt
Courtesy of VOLVO CARS CORPORATION

Raise the vehicle.

Remove the screw from the engine pad.

REMOVING THE SCREW FOR THE CABLE DUCT

Fig. 201: Identifying The Cable Duct
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the cable duct.

REMOVING THE BRACKET AND ENGINE PAD

Fig. 202: Locating Bracket And Engine Pad
Courtesy of VOLVO CARS CORPORATION

Remove:

- the nut (A)
- the 3 screws (B)
- the bracket
- the engine pad.

TIGHTENING TORQUE

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE BRACKET AND ENGINE PAD

Fig. 203: Locating Bracket And Engine Pad
Courtesy of VOLVO CARS CORPORATION

Install:

- the engine pad
- the screw for the engine pad mounting in the sub-frame. Do not tighten
- the bracket
- the 3 x M10 screws (B)
- the M10 nut (A).

REMOVING LIFTING TOOLS

Remove lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460** .

INSTALLING THE SCREW ON THE CABLE CONDUCT

Install the M6 screw for the cable duct mounting in the engine pad bracket.

INSTALLING THE AIR INTAKE

Install:

- the air intake
- the 2 M6 screws.

FINISHING

Tighten the lower M10 screw for the engine pad.

ENGINE PAD REAR, REPLACING

Special tools:

see **9995716**

see **9995460**

see **9995972**

see **9997070**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Remove the engine cover.

STEERING SHAFT JOINT LOWER REMOVING

Fig. 204: Identifying Lower Steering Shaft Joint
Courtesy of VOLVO CARS CORPORATION

Fold the floor carpet out of the way.

Bend up the outer section of the steering shaft boot.

Remove the retaining clip around the boot.

Pull the boot up.

Remove:

- the screw securing the mounting for the steering shaft in the joint
- the joint from the steering shaft.

REMOVING THE UPPER TORQUE ROD

Fig. 205: Identifying Engine Stabilizer Brace And Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the mounting screws for the torque rod
- the screw and nut for the engine mounting and torque rod
- the engine stabilizer brace.

REMOVING THE UPPER NUT FOR THE ENGINE PAD

Fig. 206: Locating The Nut
Courtesy of VOLVO CARS CORPORATION

Remove the nut.

INSTALLING LIFTING TOOLS

Fig. 207: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Install lifting tool see **9995716** converted with kit see **9997070** . Install lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

REMOVING THE RIGHT ENGINE MOUNTING

Fig. 208: Identifying Fender Liner Plastic Nuts And Protective Plate
Courtesy of VOLVO CARS CORPORATION

Remove the right-hand front wheel. Detach the right-hand lower front section of the fender liner.

Remove:

- the plastic nuts on the fender liner
- the protective plate.

Bend out the fender liner.

Fig. 209: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove both the right hand engine mounting screws.

REMOVING THE SPLASH GUARD UNDER ENGINE

Fig. 210: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 211: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 212: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

REMOVING THE SIPS MEMBER

Fig. 213: Identifying SIPS Member
Courtesy of VOLVO CARS CORPORATION

Remove:

- the four mounting screws
- the brake pipe from the snap fastener on the member
- The SIPS member.

REMOVING THE EXHAUST MOUNTING

Fig. 214: Identifying Exhaust Pipe Rubber Mountings
Courtesy of VOLVO CARS CORPORATION

Remove the rubber mountings for the exhaust pipe.

REMOVING THE ENGINE PAD SCREW

Fig. 215: Locating Engine Pad Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the engine pad mounting in the steering gear.

LOWERING THE SUB-FRAME

Fig. 216: Identifying Rear Sub-Frame Screws, Brackets & Washers
Courtesy of VOLVO CARS CORPORATION

Position a mobile jack with universal plate see **9995972** at the rear of the sub-frame.

Remove the following on both sides:

- the two screws holding the sub-frame bracket in the body
- the rear screw for the sub-frame with the bracket and washer.

Fig. 217: Lowering The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Carefully lower the sub-frame until dimension A between the sub-frame and the body is 110 mm.

REMOVING THE ENGINE COVER

Remove the engine pad.

TIGHTENING TORQUE

For correct tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE ENGINE PAD

Position the engine pad in the upper seat.

NOTE: Ensure that the guide pin for the engine pad locates correctly.

Hold the engine pad in position. Carefully raise the sub-frame.

NOTE: Guide in the steering shaft joint whilst raising the sub-frame.

Install the screw for the engine pad mounting in the steering gear. M10.

INSTALLING THE SUB-FRAME

Fig. 218: Identifying Rear Sub-Frame Screws, Brackets & Washers
Courtesy of VOLVO CARS CORPORATION

Install on both sides:

- the bracket
- the two screws for the mounting bracket. M10
- the screw for the sub-frame mounting. Use a new screw.

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE EXHAUST MOUNTING

Install the rubber mountings for the exhaust pipe.

HINT: Use soap solution to facilitate installing the rubber mountings.

INSTALLING THE SIPS MEMBER

Install:

- the brake pipe in the snap fastener on the member
- the SIPS member
- the four screws for the SIPS (side impact protection system) member mounting. M8.

INSTALLING THE SKID PLATE

Move the skid plate up in to the bumper cover strip. Press forwards until the mounting brackets engage in the sub-frame.

Install:

- the six screws. M10
- the splash guard under the engine. M8.

INSTALLING THE RIGHT-HAND ENGINE MOUNTING

Install the two screws for the right-hand engine mounting. Use new screws.

Fold the fender liner back into position

Install:

- the skid plate
- the plastic nuts
- the front wheel. See **INSTALLING WHEELS** .

For tightening torques, see **TIGHTENING TORQUE** .

REMOVING LIFTING TOOLS

Remove lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460** .

INSTALLING THE UPPER NUT FOR THE ENGINE PAD

Install a new nut. M10.

HINT: Use a magnetic sleeve or trap the nut using a wad of paper in the sleeve to facilitate installation.

INSTALLING THE UPPER TORQUE ROD

Install:

- the engine stabilizer brace
- the four mounting screws for the torque rod. M10
- the screw and nut for the engine mounting and torque rod. M12.

STEERING SHAFT JOINT LOWER INSTALLING

Install the steering shaft on the lower steering shaft joint.

Install:

- the new screw. M8
- the steering shaft boot and snap ring.

Fold back the carpet.

FINISHING

Install the engine cover.

ENGINE PAD RIGHT, REPLACING (2005-2007)

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 219: Identifying Splash Guard Under Engine

Courtesy of VOLVO CARS CORPORATION

Remove:

- the splash guard under the engine
- the right front wheel.

Fig. 220: Identifying Mobile Jack And Special Tool 999 5972
Courtesy of VOLVO CARS CORPORATION

Position a mobile jack with a universal plate see **9995972** under the oil pan on the right side of the engine.

Check that the plate does not catch in the sub-frame.

Carefully lift to relive the load from the engine pad.

DETACHING THE FENDER LINER

Fig. 221: Identifying Fender Liner Plastic Nuts And Protective Plate
Courtesy of VOLVO CARS CORPORATION

Slacken off the right lower front part of the fender liner.

Remove:

- the plastic nuts on the fender liner
- the protective plate.

Bend out the fender liner.

REMOVING THE VIBRATION DAMPER

Fig. 222: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Applies only to 6 cylinder engines:

Remove the four vibration damper screws. Counterhold the crankshaft central nut.

Remove the vibration damper.

REMOVING THE RIGHT-HAND ENGINE MOUNTING

Fig. 223: Engine Mountings Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- both the screws (A)
- both the screws (B)
- the engine pad.

TIGHTENING TORQUE

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE RIGHT-HAND ENGINE MOUNTING

Fig. 224: Engine Mountings Screws
Courtesy of VOLVO CARS CORPORATION

Install:

- the engine pad
- both the screws (A) loosely
- both the screws (B).

Tighten the screws.

For tightening torques, see **TIGHTENING TORQUE** .

Remove the mobile jack.

INSTALLING THE VIBRATION DAMPER

Applies only to 6 cylinder engines:

Install:

- the vibration damper
- the four screws. Counterhold the crankshaft central nut.

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE FENDER LINER

Install:

- the fender liner
- the protective plate
- the plastic nuts on the fender liner.

FINISHING

Install:

- the splash guard under the engine
- the right front wheel. See **INSTALLING WHEELS** .

REPLACING THE ENGINE TORQUE BRACKET

REMOVAL

REMOVING THE TORQUE BRACKET

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

Fig. 225: Identifying Torque Bracket And Screws
Courtesy of VOLVO CARS CORPORATION

Remove

- the engine stabilizer brace
- the charge air pipe (only turbocharged (TC) engines)
- the screw for the dip stick pipe (6 cylinder automatics only)
- the oil filler cap
- the cover over the ignition coils
- the torque bracket.

INSTALLATION

INSTALLING THE TORQUE BRACKET

Fig. 226: Identifying Torque Bracket And Screws
Courtesy of VOLVO CARS CORPORATION

Install

- the torque bracket. Tighten the screws (A). Tighten to **50 Nm**
- the screw for the dip stick pipe (6 cylinder automatics only)
- the cover over the ignition coils
- the oil filler cap
- the charge air pipe (only turbocharged (TC) engines)
- the engine stabilizer brace.

Tighten the screws on the suspension turrets. Tighten to **50 Nm** . Tighten the screw in the torque bracket (B). Tighten to **80 Nm** .

SUB-FRAME FRONT, REPLACING (2003-2006)

Special tools:

see **9995716**

see **9995460**

see **9512050**

see **9997062**

see **9997070**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 227: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Install lifting tool see **9995716** converted with kit see **9997070** and lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

Remove the front wheels.

REMOVING THE CLAMP FOR THE SERVO PRESSURE HOSE

Fig. 228: Clamp On Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove the clamp for the servo pressure pipe on the sub frame.

REMOVING THE RIGHT ENGINE MOUNTING

Fig. 229: Identifying Fender Liner Plastic Nuts And Protective Plate
Courtesy of VOLVO CARS CORPORATION

Slacken off the right lower front part of the fender liner.

Remove:

- the plastic nuts on the fender liner
- the protective plate.

Bend out the fender liner.

Fig. 230: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove both the right hand engine mounting screws. (1)

REMOVING THE SPLASH GUARD UNDER ENGINE

Fig. 231: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 232: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 233: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

EXPOSING THE SUB-FRAME

Fig. 234: Identifying Cable Duct Screw And Ground Lead Screw
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the cable duct
- the screw for the ground lead.

Fig. 235: Front Engine Pad Lower Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the front engine pad.

Fig. 236: Identifying Pipes and Screw Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the screw clip for the steering gear return line
- the fuel line for the engine block heater, if applicable.

Fig. 237: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the two screws holding the torque rod at the transmission.

Fig. 238: Identifying Anti-Roll Bar Links
Courtesy of VOLVO CARS CORPORATION

Remove the anti-roll bar links from the anti-roll bar on both sides. Counterhold using a Torx wrench so that the ball joint boot is not damaged.

REMOVING THE DRIVE SHAFT

Fig. 239: Identifying Drive Shaft Screw Removal Using Counter Hold On Brake Disc
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the drive shaft. Use a screwdriver as a counterhold on the brake disc.

Knock the end of the drive shaft into the hub. Use a brass drift.

Loosen the ball joint pin from the link arm, see **BALL JOINT, REPLACING** .

Fig. 240: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove the four nuts and screws holding the steering gear to the sub-frame.

Remove the power steering line from the clips on the sub-frame.

Fig. 241: Identifying SIPS Member
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw in the mounting for the front SIPS member
- the brake pipe from the snap fastener on the member
- The SIPS member.

Fig. 242: Identifying Exhaust Pipe Rubber Mountings
Courtesy of VOLVO CARS CORPORATION

Remove the rubber mountings for the exhaust pipe.

REMOVING THE SUB-FRAME

Fig. 243: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Position a lifting table under the sub-frame

Remove the following on both sides:

- the screws holding the sub-frame brackets in the bodywork
- the screw for the sub-frame mounting.

Hang up the engine block heater secured on the left-hand side of the sub-frame, if applicable.

Carefully lower the sub-frame.

NOTE: Ensure that the brake pipe clears the exhaust pipe mounting when lowering the frame.

NOTE: Ensure that the steering gear screws release from the sub-frame.

TRANSFERRING COMPONENTS

Fig. 244: Identifying Bevel Protractor
Courtesy of VOLVO CARS CORPORATION

Transfer:

- the control arms. Use new screws and new nut. Tighten the front screws. Tighten to **65 Nm** . Angle-tighten **90°** . Use bevel protractor see **9512050** . Tighten the rear screw. Tighten to **105Nm** . Angle-tighten **90°**
- the anti-roll bar. Tighten to **60 Nm**
- the right-hand engine mounting. Tighten the screws. Tighten to **65 Nm** . Angle-tighten **60°**
- the exhaust mounting bracket. Tighten to **50 Nm**
- the shock absorber Tighten to **50 Nm**
- lower torque rod. Tighten to **65 Nm** . Angle-tighten **90°** .

Install new pipe / hose holders.

INSTALLING THE SUB-FRAME

Fig. 245: Identifying Front And Rear Screws To Control Arms
Courtesy of VOLVO CARS CORPORATION

Position the sub-frame on a lifting table.

Carefully lift the sub-frame.

Locate the control arms to the ball joints and the steering gear to its mountings.

HINT: Lubricate the rubber coated clamp for the servo pressure pipe on the sub-frame using a soap solution. Install the screw before raising the sub-frame completely. Do not tighten the screw more than 2 turns as the pipe must be able to slide to the correct position in the clamp whilst raising the sub frame.

NOTE: Ensure that the brake pipe at the exhaust mounting is not trapped when raising the sub frame.

Lift the sub-frame up completely.

Install the four screws in the sub-frame together with the sub-frame brackets and engine block heater, if applicable. Use new screws. Lubricate the screws.

First tighten the screws on the left side of the sub-frame. Tighten to **105 Nm** . Angle tighten to **120°** . Then tighten the right-hand side to the same value.

Finally tighten the screws for the brackets on both sides to **50 Nm** .

see **SUBFRAME, ADJUSTING**

INSTALLING REMOVED COMPONENTS

Install:

- the rubber mountings for the exhaust pipe
- SIPS (side impact protection system) member
- the four screws for the SIPS (side impact protection system) member. Tighten to **24 Nm** .

Install the four nuts and the screw holding the steering gear. Use new nuts and a new screw. Tighten to **50 Nm** .

Clip the cable in position.

Install:

- the ball joints. Use new nuts. Tighten to **80 Nm** . Counterhold using a Torx wrench so that the ball joint boot is not damaged
- the anti-roll bar links. Use new nuts. Tighten to **50 Nm** . Counterhold using a Torx wrench so that the boot is not damaged.

Install:

- the lower torque rod. Tighten the two screws. Tighten to **10 Nm**
- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the screw clip for the steering gear return line
- the fuel line for the engine block heater, if applicable.
- the screw for the cable duct
- the screw for the ground lead.

INSTALLING THE DRIVE SHAFT

Install new screws on both sides. Use a screwdriver as a counterhold. Tighten to **35Nm** . Angle-tighten **90°** . Use bevel protractor see **9512050** .

INSTALLING THE SKID PLATE

Move the skid plate up into the bumper wraparound.

Press forwards until the mounting brackets engage in the sub frame.

Install the screws. Tighten to **50 Nm** .

Install the splashguard under the engine. Tighten to **24 Nm** .

INSTALLING THE RIGHT-HAND ENGINE MOUNTING

Install the right-hand engine mounting. Use new screws. Tighten to **35 Nm** . Angle-tighten **90°** .

Fold the fender liner back into position.

Install:

- the skid plate
- the plastic nuts
- the front wheels. See **INSTALLING WHEELS**

INSTALLING THE CLAMP FOR THE SERVO PRESSURE HOSE

Fig. 246: Clamp On Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Tighten the clamp for the servo pressure pipe on the sub frame. Tighten to **10 Nm** .

REMOVING LIFTING TOOLS

Remove lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460** .

FINISHING

Align the wheels. See **WHEEL ALIGNMENT, CHECKING / ADJUSTING** .

SUB-FRAME FRONT, REPLACING (2007)

Special tools:

see **9995716**

see **9995460**

see **9512050**

see **9997062**

see **9997070**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 247: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Install lifting tool see **9995716** converted with kit see **9997070** and lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

Remove the front wheels.

REMOVING THE CLAMP FOR THE SERVO PRESSURE HOSE

Fig. 248: Clamp On Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove the clamp for the servo pressure pipe on the sub frame.

REMOVING THE RIGHT ENGINE MOUNTING

Fig. 249: Identifying Fender Liner Plastic Nuts And Protective Plate
Courtesy of VOLVO CARS CORPORATION

Slacken off the right lower front part of the fender liner.

Remove:

- the plastic nuts on the fender liner
- the protective plate.

Bend out the fender liner.

Fig. 250: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove both the right hand engine mounting screws. (1)

REMOVING THE SPLASH GUARD UNDER ENGINE

Fig. 251: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 252: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 253: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

EXPOSING THE SUB-FRAME

Fig. 254: Identifying Cable Duct Screw And Ground Lead Screw
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the cable duct
- the screw for the ground lead.

Fig. 255: Front Engine Pad Lower Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the front engine pad.

Fig. 256: Identifying Pipes and Screw Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the screw clip for the steering gear return line
- the fuel line for the engine block heater, if applicable.

Fig. 257: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the two screws holding the torque rod at the transmission.

Fig. 258: Identifying Anti-Roll Bar Links
Courtesy of VOLVO CARS CORPORATION

Remove the anti-roll bar links from the anti-roll bar on both sides. Counterhold using a Torx wrench so that the ball joint boot is not damaged.

REMOVING THE DRIVE SHAFT

Fig. 259: Identifying Drive Shaft Screw Removal Using Counter Hold On Brake Disc
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the drive shaft. Use a screwdriver as a counterhold on the brake disc.

Knock the end of the drive shaft into the hub. Use a brass drift.

Loosen the ball joint pin from the link arm, see **BALL JOINT, REPLACING** .

Fig. 260: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove the four nuts and screws holding the steering gear to the sub-frame.

Remove the power steering line from the clips on the sub-frame.

Fig. 261: Identifying SIPS Member
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw in the mounting for the front SIPS member
- the brake pipe from the snap fastener on the member
- The SIPS member.

Fig. 262: Identifying Exhaust Pipe Rubber Mountings
Courtesy of VOLVO CARS CORPORATION

Remove the rubber mountings for the exhaust pipe.

REMOVING THE SUB-FRAME

Fig. 263: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Position a lifting table under the sub-frame

Remove the following on both sides:

- the screws holding the sub-frame brackets in the bodywork
- the screw for the sub-frame mounting.

Hang up the engine block heater secured on the left-hand side of the sub-frame, if applicable.

Carefully lower the sub-frame.

NOTE: Ensure that the brake pipe clears the exhaust pipe mounting when lowering the frame.

NOTE: Ensure that the steering gear screws release from the sub-frame.

TRANSFERRING COMPONENTS

Fig. 264: Identifying Bevel Protractor
Courtesy of VOLVO CARS CORPORATION

Transfer:

- the control arms. Use new screws and new nut. Tighten the front screws. Tighten to **65 Nm** . Angle-tighten **90°** . Use bevel protractor see **9512050** . Tighten the rear screw. Tighten to **105Nm** . Angle-tighten **90°**
- the anti-roll bar. Tighten to **60 Nm**
- the right-hand engine mounting. Tighten the screws. Tighten to **65 Nm** . Angle-tighten **60°**
- the exhaust mounting bracket. Tighten to **50 Nm**
- the shock absorber Tighten to **50 Nm**
- lower torque rod. Tighten to **65 Nm** . Angle-tighten **90°** .

Install new pipe / hose holders.

INSTALLING THE SUB-FRAME

Fig. 265: Identifying Front And Rear Screws To Control Arms
Courtesy of VOLVO CARS CORPORATION

Position the sub-frame on a lifting table.

Carefully lift the sub-frame.

Locate the control arms to the ball joints and the steering gear to its mountings.

HINT: Lubricate the rubber coated clamp for the servo pressure pipe on the sub-frame using a soap solution. Install the screw before raising the sub-frame completely. Do not tighten the screw more than 2 turns as the pipe must be able to slide to the correct position in the clamp whilst raising the sub frame.

NOTE: Ensure that the brake pipe at the exhaust mounting is not trapped when raising the sub frame.

Lift the sub-frame up completely.

Install the four screws in the sub-frame together with the sub-frame brackets and engine block heater, if applicable. Use new screws. Lubricate the screws.

First tighten the screws on the left side of the sub-frame. Tighten to **105 Nm** . Angle tighten to **120°** . Then tighten the right-hand side to the same value.

Finally tighten the screws for the brackets on both sides to **50 Nm** .

see **SUBFRAME, ADJUSTING**

INSTALLING REMOVED COMPONENTS

Install:

- the rubber mountings for the exhaust pipe
- SIPS (side impact protection system) member
- the four screws for the SIPS (side impact protection system) member. Tighten to **24 Nm** .

Install the four nuts and the screw holding the steering gear. Use new nuts and a new screw. Tighten to **50 Nm** .

Clip the cable in position.

Install:

- the ball joints. Use new nuts. Tighten to **80 Nm** . Counterhold using a Torx wrench so that the ball joint boot is not damaged
- the anti-roll bar links. Use new nuts. Tighten to **50 Nm** . Counterhold using a Torx wrench so that the boot is not damaged.

Install:

- the lower torque rod. Tighten the two screws. Tighten to **10 Nm**
- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the screw clip for the steering gear return line
- the fuel line for the engine block heater, if applicable.
- the screw for the cable duct
- the screw for the ground lead.

INSTALLING THE DRIVE SHAFT

Install new screws on both sides. Use a screwdriver as a counterhold. Tighten to **35Nm** . Angle-tighten **90°** . Use bevel protractor see **9512050** .

INSTALLING THE SKID PLATE

Move the skid plate up into the bumper wraparound.

Press forwards until the mounting brackets engage in the sub frame.

Install the screws. Tighten to **50 Nm** .

Install the splashguard under the engine. Tighten to **24 Nm** .

INSTALLING THE RIGHT-HAND ENGINE MOUNTING

Install the right-hand engine mounting. Use new screws. Tighten to **35 Nm** . Angle-tighten **90°** .

Fold the fender liner back into position.

Install:

- the skid plate
- the plastic nuts
- the front wheels. See **INSTALLING WHEELS**

INSTALLING THE CLAMP FOR THE SERVO PRESSURE HOSE

Fig. 266: Clamp On Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Tighten the clamp for the servo pressure pipe on the sub frame. Tighten to **10 Nm** .

REMOVING LIFTING TOOLS

Remove lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460** .

FINISHING

Align the wheels. See **WHEEL ALIGNMENT, CHECKING / ADJUSTING** .

TORQUE ROD LOWER, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 267: Removing The Splash Guard
Courtesy of VOLVO CARS CORPORATION

Raise the car.

Remove the splash guard under the engine.

REMOVING THE LOWER TORQUE ROD

Fig. 268: Installing Lower Torque Rod
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screws (A)
- the nuts (B)
- the engine stabilizer brace.

INSTALLING THE LOWER TORQUE ROD

Fig. 269: Installing Lower Torque Rod
Courtesy of VOLVO CARS CORPORATION

Install the strut.

Tighten:

- the screws (A) to the transmission. (M10)
- the nuts (B) against the sub-frame. See **TIGHTENING TORQUE**
- the engine stabilizer brace.

FINISHING

Fig. 270: Removing The Splash Guard
Courtesy of VOLVO CARS CORPORATION

Install the splashguard under the engine.

TIGHTENING TORQUE

see: **TIGHTENING TORQUE**

ENGINE MOUNTING (B6294T; 2003-2006)

ENGINE PAD FRONT, REPLACING

Special tools:

see **9995716**

see **9995460**

see **9997018**

see **9997070**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE AIR INTAKE

Fig. 271: Removing The Air Intake
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 screws
- the air intake.

REMOVING THE CHARGE AIR PIPE

Detach the clamps at the charge air cooler (CAC) and at the electronic throttle unit (ETM). Pull off the pipe and allow it to hang.

REMOVING THE LOWER ENGINE PAD SCREW

Fig. 272: Locating Lower Engine Pad Bolt
Courtesy of VOLVO CARS CORPORATION

Raise the vehicle.

Remove the screw from the engine pad.

REMOVING THE SCREW FOR THE CABLE DUCT

Fig. 273: Identifying The Cable Duct
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the cable duct.

INSTALLING LIFTING TOOLS

Fig. 274: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Lower the vehicle.

Install lifting lug see **9997018** on the left hand side of the engine at the 2 screws.

Lock the lifting lug using the snap ring.

Install lifting tool see **9995716** converted with kit see **9997070** . Install lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

REMOVING THE BRACKET AND ENGINE PAD

Fig. 275: Locating Bracket And Engine Pad
Courtesy of VOLVO CARS CORPORATION

Remove:

- the nut (A)
- the 3 screws (B)
- the bracket
- the engine pad.

TIGHTENING TORQUE

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE BRACKET AND ENGINE PAD

Fig. 276: Locating Bracket And Engine Pad
Courtesy of VOLVO CARS CORPORATION

Install:

- the engine pad
- the screw for the engine pad mounting in the sub-frame. Do not tighten
- the bracket
- the 3 x M10 screws (B)
- the M10 nut (A).

REMOVING LIFTING TOOLS

Remove lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460** .

INSTALLING THE SCREW ON THE CABLE CONDUCT

Raise the car.

Install the M6 screw for the cable duct mounting in the engine pad bracket.

Tighten the lower M10 screw for the engine pad.

INSTALLING THE CHARGE AIR PIPE

Lower the car.

Install the charge air pipe and tighten the clamps.

INSTALLING THE AIR INTAKE

Install:

- the air intake
- the two screws. M6.

ENGINE PAD REAR, REPLACING

Special tools:

see **9995716**

see **9995460**

see **9995972**

see **9997018**

see **9997070**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

STEERING SHAFT JOINT LOWER REMOVING

Fig. 277: Identifying Lower Steering Shaft Joint
Courtesy of VOLVO CARS CORPORATION

Fold the floor carpet out of the way.

Bend up the outer section of the steering shaft boot.

Remove the retaining clip around the boot.

Pull the boot up.

Remove:

- the screw securing the mounting for the steering shaft in the joint
- the joint from the steering shaft.

REMOVING THE UPPER TORQUE ROD

Fig. 278: Identifying Engine Stabilizer Brace And Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the mounting screws for the torque rod
- the screw and nut for the engine mounting and torque rod
- the engine stabilizer brace.

REMOVING THE UPPER NUT FOR THE ENGINE PAD

Fig. 279: Locating The Nut
Courtesy of VOLVO CARS CORPORATION

Remove the nut.

INSTALLING LIFTING TOOLS

Fig. 280: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Install lifting lug see **9997018** on the left hand side of the engine at the 2 screws.

Lock the lifting lug using the snap ring.

Install lifting tool see **9995716** converted with kit see **9997070** . Install lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

REMOVING THE RIGHT ENGINE MOUNTING

Fig. 281: Identifying Fender Liner Plastic Nuts And Protective Plate
Courtesy of VOLVO CARS CORPORATION

Remove the right front wheel.

Slacken off the right lower front part of the fender liner.

Remove:

- the plastic nuts on the fender liner
- the protective plate.

Bend out the fender liner.

Fig. 282: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws for the vibration damper. Counterhold the crankshaft central nut

Remove the vibration damper.

REMOVING THE SPLASH GUARD UNDER ENGINE

Fig. 283: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 284: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 285: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

REMOVING THE SIPS MEMBER

Fig. 286: Identifying SIPS Member
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 4 screws for the mounting
- the brake pipe from the snap fastener on the member
- The SIPS member.

REMOVING THE EXHAUST MOUNTING

Fig. 287: Identifying Exhaust Pipe Rubber Mountings
Courtesy of VOLVO CARS CORPORATION

Remove the rubber mountings for the exhaust pipe.

REMOVING THE ENGINE PAD SCREW

Fig. 288: Locating Engine Pad Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the engine pad mounting in the steering gear.

LOWERING THE SUB-FRAME

Fig. 289: Identifying Rear Sub-Frame Screws, Brackets & Washers
Courtesy of VOLVO CARS CORPORATION

Position a mobile jack with universal plate see **9995972** at the rear of the sub-frame.

Remove the following on both sides:

- the 2 screws holding the sub-frame bracket in the bodywork
- the rear screw for the sub-frame with the bracket and washer.

Fig. 290: Lowering The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Carefully lower the sub-frame until dimension A between the sub-frame and the body is 110 mm.

REMOVING THE ENGINE COVER

Remove the engine pad.

TIGHTENING TORQUE

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE ENGINE PAD

Position the engine pad in the upper seat.

NOTE: Ensure that the guide pin for the engine pad locates correctly.

Hold the engine pad in position. Carefully raise the sub-frame.

Install the new M10 screw for the engine pad mounting in the steering gear.

INSTALLING THE SUB-FRAME

Fig. 291: Identifying Rear Sub-Frame Screws, Brackets & Washers
Courtesy of VOLVO CARS CORPORATION

Install on both sides:

- the bracket
- the 2 x M10 screws for the mounting bracket
- the screw for the sub-frame mounting. Use a new screw.

For tightening torques, see **TIGHTENING TORQUE** .

INSTALLING THE EXHAUST MOUNTING

Install the rubber mountings for the exhaust pipe.

HINT: Use soap solution to facilitate installing the rubber mountings.

INSTALLING THE SIPS MEMBER

Install:

- the brake pipe in the snap fastener on the member
- the SIPS member

- the 4 x M8 screws for the SIPS (side impact protection system) member mounting.

INSTALLING THE SKID PLATE

Move the skid plate up in to the bumper cover strip. Press forwards until the mounting brackets engage in the sub-frame.

Install:

- the 6 x M10 screws
- the splash guard under the engine. M8.

INSTALLING THE RIGHT-HAND ENGINE MOUNTING

Install:

- the 2 x right hand engine mounting screws Use new screws
- the 4 screws for the vibration damper. Use new screws.

Fold the fender liner back into position

Install:

- the skid plate
- the plastic nuts
- the front wheel. See **INSTALLING WHEELS** .

For tightening torques, see **TIGHTENING TORQUE** .

REMOVING LIFTING TOOLS

Remove:

- lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460**
- lifting lug 999 7018.

INSTALLING THE UPPER NUT FOR THE ENGINE PAD

Install a new M10 nut.

HINT: Use a magnetic sleeve or trap the nut using a wad of paper in the sleeve to facilitate installation.

INSTALLING THE UPPER TORQUE ROD

Install:

- the engine stabilizer brace
- the 4 x M10 mounting screws for the torque rod
- the M12 screw and nut for the engine mounting and torque rod.

STEERING SHAFT JOINT LOWER INSTALLING

Install the steering shaft on the lower steering shaft joint.

Install:

- the new screw. M8
- the steering shaft boot and snap ring.

Fold back the carpet.

ENGINE PAD RIGHT, REPLACING (2005-2007)

see **ENGINE PAD RIGHT, REPLACING (2005-2007)**

REPLACING THE ENGINE TORQUE BRACKET

see **REPLACING THE ENGINE TORQUE BRACKET**

SUB-FRAME FRONT, REPLACING

Special tools:

see **9997018**

see **9995716**

see **9995460**

see **9512050**

see **9997062**

see **9997070**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 292: Identifying Fixture Kit, Lifting Beam And Lifting Hooks
Courtesy of VOLVO CARS CORPORATION

Install lifting lug see **9997018** on the left hand side of the engine at the 2 screws.

Lock the lifting lug using the snap ring.

Install lifting tool see **9995716** converted with kit see **9997070** . Install lifting hooks see **9995460** .

Lift the engine to relieve the load on the engine pads.

Remove the front wheels.

REMOVING THE CLAMP FOR THE SERVO PRESSURE HOSE

Fig. 293: Clamp On Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove the clamp for the servo pressure line on the sub frame.

REMOVING THE RIGHT ENGINE MOUNTING

Fig. 294: Identifying Fender Liner Plastic Nuts And Protective Plate
Courtesy of VOLVO CARS CORPORATION

Slacken off the right lower front part of the fender liner.

Remove:

- the plastic nuts on the fender liner
- the protective plate.

Bend out the fender liner.

Fig. 295: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws for the vibration damper. Counterhold the crankshaft central nut.

Remove the vibration damper.

Fig. 296: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 2 screws for the right hand engine mounting. (1)

REMOVING THE SPLASH GUARD UNDER ENGINE

Fig. 297: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 298: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 299: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

EXPOSING THE SUB-FRAME

Fig. 300: Identifying Cable Duct Screw And Ground Lead Screw
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the cable duct
- the screw for the ground lead.

Fig. 301: Front Engine Pad Screw
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the front engine pad.

Fig. 302: Identifying Pipes and Screw Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the screw clip for the steering gear return line
- the fuel line for the engine block heater and the engine block heater (if applicable) on the left side of the sub-frame.

Fig. 303: Identifying Torque Rod To Engine Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws holding the torque rod to the engine.

Fig. 304: Identifying Anti-Roll Bar Links
Courtesy of VOLVO CARS CORPORATION

Remove the anti-roll bar links from the anti-roll bar on both sides. Counterhold using a Torx wrench so that the ball joint boot is not damaged.

REMOVING THE DRIVE SHAFT

Fig. 305: Identifying Drive Shaft Screw Removal Using Counter Hold On Brake Disc
Courtesy of VOLVO CARS CORPORATION

Remove the screw for the drive shaft. Use a screwdriver as a counterhold on the brake disc.

Knock the end of the drive shaft into the hub. Use a brass drift.

Fig. 306: Disconnecting Ball Joint Pinion From Control Arm Using 999 7062
Courtesy of VOLVO CARS CORPORATION

Disconnect the ball joint pinion from the control arm. Use tool see **9997062** .

Install cap nut **7062-1** on the ball joint pinion.

Tighten the nut against the control arm.

Then turn back one turn to form a gap between the cap nut and the control arm.

Position the extractor on the control arm. Detach the ball joint from the control arm.

Fig. 307: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove the 4 nuts and the screw holding the steering gear to the sub-frame.

Remove the power steering line from the clips on the sub-frame.

Fig. 308: EVAP Canister Hose
Courtesy of VOLVO CARS CORPORATION

Remove the hose for the EVAP canister in the joint by pulling apart the hose. Route the hose under the anti-roll bar.

Fig. 309: Identifying SIPS Member
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw in the mounting for the front SIPS member
- the brake pipe from the snap fastener on the member
- The SIPS member.

Fig. 310: Identifying Exhaust Pipe Rubber Mountings
Courtesy of VOLVO CARS CORPORATION

Remove the rubber mountings for the exhaust pipe.

Fig. 311: Identifying Heated Oxygen Sensor (HO2S) Connector
Courtesy of VOLVO CARS CORPORATION

Remove the connector for the heated oxygen sensor (HO2S) from its mounting.

REMOVING THE SUB-FRAME

Fig. 312: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Position a lifting table under the sub-frame

Remove the following on both sides:

- the screws holding the sub-frame brackets in the bodywork
- the screw for the sub-frame mounting.

Carefully lower the sub-frame.

NOTE: Ensure that the brake pipe clears the exhaust pipe mounting when lowering the frame.

NOTE: Ensure that the steering gear screws release from the sub-frame.

TRANSFERRING COMPONENTS

Fig. 313: Identifying Bevel Protractor
Courtesy of VOLVO CARS CORPORATION

Transfer:

- the control arms. Use new screws and new nut. Tighten the front screws. Tighten to **65 Nm** . Angle-tighten **90°** . Use bevel protractor see **9512050** . Tighten the rear screw. Tighten to **105 Nm** . Angle-tighten **90°**
- the anti-roll bar. Tighten to **60 Nm**
- the right-hand engine mounting. Tighten the screws. Tighten to **65 Nm** . Angle-tighten **60°**
- the exhaust mounting bracket. Tighten to **50 Nm**
- the shock absorber Tighten to **50 Nm**
- lower torque rod. Tighten to **65 Nm** . Angle-tighten **90°** .

Install new pipe / hose holders.

INSTALLING THE SUB-FRAME

Fig. 314: Identifying Front And Rear Screws To Control Arms
Courtesy of VOLVO CARS CORPORATION

Position the sub-frame on a lifting table.

Carefully lift the sub-frame.

Locate the control arms to the ball joints and the steering gear to its mountings.

HINT: Lubricate the rubber coated clamp for the servo pressure pipe on the sub-frame using a soap solution. Install the screw before raising the sub-frame completely. Do not tighten the screw more than 2 turns as the pipe must be able to slide to the correct position in the clamp whilst raising the sub frame.

NOTE: Ensure that the brake pipe at the exhaust mounting is not trapped when raising the sub frame.

Lift the sub-frame up completely.

Install the four screws in the sub-frame together with the sub-frame brackets and engine block heater, if applicable. Use new screws. Lubricate the screws.

First tighten the screws on the left side of the sub-frame. Tighten to **105 Nm** . Angle tighten to **120°** . Then tighten the right-hand side to the same value.

Finally tighten the screws for the brackets on both sides to **50 Nm** .

INSTALLING REMOVED COMPONENTS

Install:

- the heated oxygen sensor (HO2S) connector
- the rubber mountings for the exhaust pipe
- SIPS (side impact protection system) member
- the four screws for the SIPS (side impact protection system) member. Tighten to **24 Nm** .

Route the hose for the EVAP canister to the correct position and press the joints together

Install the four nuts and the screw holding the steering gear. Use new nuts and a new screw. Tighten to **50 Nm** .

Clip the cable in position.

Install:

- the ball joints. Use new nuts. Tighten to **80 Nm** . Counterhold using a Torx wrench so that the ball joint boot is not damaged
- the anti-roll bar links. Use new nuts. Tighten to **50 Nm** . Counterhold using a Torx wrench so that the boot is not damaged.

Install:

- the lower torque rod. Tighten the two screws. Tighten to **10 Nm**
- the oil pipe for the steering gear from the snap fasteners along the sub-frame
- the screw clip for the steering gear return line
- the engine block heater and the fuel line to the engine block heater if applicable
- the screw for the cable duct
- the screw for the ground lead.

INSTALLING THE DRIVE SHAFT

Install new screws on both sides. Use a screwdriver as a counterhold. Tighten to **35 Nm** . Angle-tighten **90°** . Use bevel protractor see **9512050** .

INSTALLING THE SKID PLATE

Move the skid plate up into the bumper wraparound.

Press forwards until the mounting brackets engage in the sub frame.

Install the screws. Tighten to **50 Nm** .

Install the splashguard under the engine. Tighten to **24 Nm** .

INSTALLING THE RIGHT-HAND ENGINE MOUNTING

Install the right-hand engine mounting. Use new screws. Tighten to **35 Nm** . Angle-tighten **90°** .

Fold the fender liner back into position.

Install:

- the skid plate
- the plastic nuts
- the front wheels. See **INSTALLING WHEELS** .

INSTALLING THE CLAMP FOR THE SERVO PRESSURE HOSE

Fig. 315: Clamp On Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Tighten the clamp for the servo pressure pipe on the sub frame. Tighten to **10 Nm** .

REMOVING LIFTING TOOLS

Remove lifting tool see **9995716** , kit see **9997070** , lifting hooks see **9995460** and lifting lug see **9997018** .

Remove

FINISHING

Align the wheels. See **WHEEL ALIGNMENT, CHECKING / ADJUSTING** .

TORQUE ROD LOWER, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 316: Removing The Splash Guard
Courtesy of VOLVO CARS CORPORATION

Raise the car.

Remove the splash guard under the engine.

REMOVING THE LOWER TORQUE ROD

Fig. 317: Installing The Lower Torque Rod
Courtesy of VOLVO CARS CORPORATION

Remove:

- the four screws (A)
- the two nuts (B)
- the engine stabilizer brace.

INSTALLING THE LOWER TORQUE ROD

Fig. 318: Installing The Lower Torque Rod
Courtesy of VOLVO CARS CORPORATION

Install the strut.

Tighten:

- the four screws (A) to the engine. (M10)
- the two nuts (B) to the sub-frame. See **TIGHTENING TORQUE**
- the engine stabilizer brace.

FINISHING

Fig. 319: Removing The Splash Guard
Courtesy of VOLVO CARS CORPORATION

Install the splashguard under the engine.

ENGINE SUSPENSION (2003-2012)

BUSHING SUB-FRAME, REPLACING (2009-2012)

Special tools:

see **9995575**

see **9995576**

see **9512564**

see **9997018**

see **9997070**

see **9995716**

see **9995460**

see **9995185**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

IMPORTANT INFORMATION

Fig. 320: Identifying The Round Hole
Courtesy of VOLVO CARS CORPORATION

NOTE: **From 2009 onwards the hole in the middle of the bushing is round.**

HINT: Carry out work using see 9995575 together with see 9995576 or see 9512564 .

PREPARATORY WORK

Remove the engine cover.

Fig. 321: Installed Lifting Eye
Courtesy of VOLVO CARS CORPORATION

Applies only to six cylinder engines:

Install lifting eye see **9997018** on the left side of the engine at the 2 screws.

Lock the lifting lug using the catch.

Fig. 322: Identifying Fixture Kit, Lifting Beam And Lifting Hooks

Courtesy of VOLVO CARS CORPORATION

Installing the lifting beams and lifting hooks on the engine lifting lugs.

NOTE: The front lifting beam must be equipped with fixture kit see 9997070 as illustrated.

Position lifting beam see **9995716** on the wheel arch and directly above the engine lifting eyelets on the left and right-hand sides.

Connect lifting hooks see **9995460** on the lifting lugs on the right-hand side of the engine with a clearance of 10 mm.

Applies only to the T6:

Also use lifting lug see **9995185** on the left-hand side of the engine.

Tighten to light contact on the left hand side.

Fig. 323: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front wheels
- the splash guard under the engine.

REMOVING THE SKID PLATE

Fig. 324: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 325: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

Lift and slide the splash guard forward.

Remove the protective plate.

NOTE: **There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.**

REMOVING COMPONENTS

Fig. 326: Identifying Screw For Cable Duct
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the cable duct
- evacuation pipe mounting for the control module box from the sub-frame.

REMOVING THE LOWER SCREW FROM THE FRONT ENGINE PAD

Fig. 327: Front Engine Pad Lower Screw
Courtesy of VOLVO CARS CORPORATION

Remove the lower screw for the front engine pad.

REMOVING THE LOWER TORQUE ROD

Fig. 328: Identifying Torque Rod To Engine Screws
Courtesy of VOLVO CARS CORPORATION

Remove 4 screws from the lower torque rod (A).

REMOVING THE VIBRATION DAMPER (6-CYLINDER ENGINES ONLY)

Fig. 329: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Remove the four vibration damper screws. Counterhold the crankshaft central nut.

Remove:

- the vibration damper
- the auxiliaries belt.

REMOVING THE SCREWS FOR THE RIGHT-HAND ENGINE MOUNTING

Fig. 330: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove the screws holding the right-hand engine mounting in the engine.

REMOVING THE NUTS AND SCREW FOR THE STEERING GEAR

Fig. 331: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the four nuts and the screw holding the steering gear
- the nut (A), holding the lower half of the collision protection system. **(Applies only to right-hand drive cars)** .

REMOVING THE DELIVERY LINE FOR THE STEERING GEAR

Fig. 332: Identifying Oil Pipe And Clamps For Steering Gear
Courtesy of VOLVO CARS CORPORATION

Remove the delivery line for the steering gear from the snap fastener on the sub-frame. Remove any fuel line to the engine block heater.

LOWERING THE SUB-FRAME

Fig. 333: Identifying Lifting Table, Sub-Frame Brackets, Screws And Washers
Courtesy of VOLVO CARS CORPORATION

Remove and hang the engine block heater (if applicable) on the left front mounting for the sub-frame.

Remove the fuel line for the engine block heater (if applicable) on the sub-frame from the snap fasteners.

Position a lifting table under the sub-frame.

Apply the lifting table so that the load is taken off the sub-frame screws.

Remove the sub-frame screws together with the accompanying brackets and washers.

Carefully lower the sub-frame approximately 50 mm.

NOTE: Ensure that the steering gear screws release from the sub-frame.

Fig. 334: Identifying Heated Oxygen Sensor (HO2S) Connector
Courtesy of VOLVO CARS CORPORATION

Remove the bracket for the heated oxygen sensor (HO2S) from the sub-frame.

Remove the heated oxygen sensor's wiring from the right side of the **sub-frame (only applies to 6 cylinder engines)** .

Lower the sub-frame a further 40 mm.

PRESSING OUT THE BUSHINGS

Fig. 335: Identifying Special Tools To Press Bushings
Courtesy of VOLVO CARS CORPORATION

Install the hydraulic tool and press sleeve as illustrated.

Press the bushings out of the sub-frame, see the following illustration.

NOTE: It is arbitrary which of tools see 9995575 , see 9995576 and see 9512564 is used.

MARKING FOR THE BUSHING ON THE SUB-FRAME

Fig. 336: Identifying Marking For The Bushing On The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Clean the hole for the bushing in the sub-frame.

Press out the bushing by hand.

CAUTION: The markings on the bushing and sub-frame must be positioned opposite each other.

MARKING THE LEFT-HAND REAR BUSHING

Fig. 337: Identifying The Round Hole
Courtesy of VOLVO CARS CORPORATION

NOTE: From 2009 onwards the hole in the middle of the bushing is round.

CAUTION: The markings on the bushing and sub-frame must be positioned opposite each other.

PRESSING IN THE BUSHINGS

Fig. 338: Identifying Special Tools To Press Bushings
Courtesy of VOLVO CARS CORPORATION

Install the hydraulic tool and press sleeve as illustrated.

Fig. 339: Identifying Bushings & Sub-Frame Assembly
Courtesy of VOLVO CARS CORPORATION

Press the bushings into the sub-frame, see the following illustration.

NOTE: It is arbitrary which of tools see 9995575 , see 9995576 and see 9512564 is used.

INSTALLING THE WIRING FOR THE HEATED OXYGEN SENSOR (HO2S)

Fig. 340: Identifying Heated Oxygen Sensor (HO2S) Connector
Courtesy of VOLVO CARS CORPORATION

Lift up the sub-frame slightly (approximately 50 mm from the car body).

Install the bracket for the heated oxygen sensor (HO2S) on the sub-frame.

Install the heated oxygen sensor (HO2S) wiring on the right hand side of the sub-frame (**applies to 6- cylinder engines only**).

LIFTING THE SUB-FRAME

Fig. 341: Identifying Lifting Table, Sub-Frame Brackets, Screws And Washers
Courtesy of VOLVO CARS CORPORATION

Lift the sub-frame up completely.

At the same time locate the mounting screws for the steering gear on the sub-frame.

Loosely install the sub-frame brackets together with the washers.

Install the four screws for the sub-frame. Use new screws. **Do not tighten yet** .

First tighten the screws on the left side of the sub-frame. Tighten to **105 Nm** . Angle tighten to **120°** . Then tighten the right-hand side to the same value as the left side

Finally tighten the bracket screws. Tighten to **50 Nm** . Install the engine block heater (if applicable) on the left front mounting for the sub-frame.

CAUTION: Tighten the left-hand side first. The sub-frame guides are on the left-hand side.

INSTALLING THE NUTS AND SCREW FOR THE STEERING GEAR

Fig. 342: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Install the four nuts and the screw holding the steering gear. Use new nuts and a new screw. Tighten to **50 Nm** .

Applies to right-hand drive cars:

Install nut (A), holding the lower half of the collision protection. Tighten to **50 Nm** .

INSTALLING THE DELIVERY LINE FROM THE STEERING GEAR

Fig. 343: Identifying Pipes and Screw Clips
Courtesy of VOLVO CARS CORPORATION

Install the delivery line from the steering gear on the mountings on the sub-frame. Install any fuel line for the engine block heater.

INSTALLING THE SCREWS FOR THE ENGINE MOUNTING TO THE ENGINE

Fig. 344: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Reinstall the screws holding the engine mounting to the engine. Tighten to **35 Nm** . Angle-tighten **90°** .

NOTE: Use new screws.

INSTALLING THE VIBRATION DAMPER (6-CYLINDER ENGINES ONLY)

Fig. 345: Counterholding Crankshaft Central Nut
Courtesy of VOLVO CARS CORPORATION

Install the vibration damper using new screws. Tighten to **35 Nm** . Angle-tighten **50°** .

Use the crankshaft center nut as a counterhold.

TIGHTENING THE SCREWS FOR THE LOWER TORQUE ROD

Fig. 346: Identifying Torque Rod To Engine Screws
Courtesy of VOLVO CARS CORPORATION

Tighten the 4 screws (A) for the lower torque rod. Tighten to **50 Nm** .

INSTALLING THE SCREW FOR THE FRONT ENGINE PAD

Fig. 347: Front Engine Pad Lower Screw
Courtesy of VOLVO CARS CORPORATION

Install the front engine pad screw. Tighten to **50 Nm** .

See Sub frame, adjustment:**SUBFRAME, ADJUSTING**

INSTALLING THE PROTECTIVE COVER

Fig. 348: Identifying Splash Guard Under Engine
Courtesy of VOLVO CARS CORPORATION

Install the splashguard under the engine.

REMOVING LIFTING TOOLS

Remove:

- lifting tool see **9995716** with supplementary kit see **9997070** .
- lifting hooks see **9995460** .

Applies only to the T6:

Remove:

- lifting eye see **9995185**
- lifting eye see **9997018** .

FINISHING

Install the wheels, see **INSTALLING WHEELS** .

Install the engine cover.

BUSHING SUB-FRAME, REPLACING (2003-2008)

see **BUSHING SUB-FRAME, REPLACING (2003-2008)**

REPLACING THE TORQUE ROD

see **REPLACING THE TORQUE ROD**

ENGINE SUSPENSION (B8444S; 2005-2008)

ENGINE MOUNT REAR, REPLACING

Special tools:

see **9997070**

see **9997070**

see **9995460**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

PREPARATORY WORK

Remove:

- the oil filler cap
- the upper front engine casing by pulling it straight up. Fit the oil filler cap.

REMOVING THE ENGINE PAD

Fig. 349: Identifying Nut
Courtesy of VOLVO CARS CORPORATION

Remove the upper nut for the engine pad.

REMOVING THE BOLTS TO THE TORQUE ROD

Fig. 350: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x screws by the suspension turret on both sides.

REMOVING THE PROTECTIVE COVER UNDER THE ENGINE

Fig. 351: Identifying the Protective Under Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the protective cover under the engine.

REMOVING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

Fig. 352: Removing Exhaust Pipes
Courtesy of VOLVO CARS CORPORATION

Remove:

- both exhaust pipes' nuts
- both exhaust pipes

INSTALLING THE LIFTING TOOL

Fig. 353: Installing The Lifting Tool 9995716
Courtesy of VOLVO CARS CORPORATION

Install lifting tool see **9995716** converted with kit see **9997070** and lifting hooks see **9995460** .

CAUTION: Do not raise the engine yet.

CAUTION: When lifting the engine make sure that the lifting eye does not scratch the torque rod. Tape the torque rod and keep it away from the lifting eye.

REMOVING THE ENGINE PAD, CONTINUED

Fig. 354: Removing The Engine Pad
Courtesy of VOLVO CARS CORPORATION

Release the heated oxygen sensor (HO2S) connectors, x2, from the subframe.

Fold the protective plate under the steering gear to one side to gain access to the engine pad's lower screw. Remove the engine pad screw.

Raise the engine on the left-hand side of the vehicle approximately **45 mm** . Remove the engine pad together with the protective plate.

INSTALLATION

INSTALLING THE ENGINE PAD

CAUTION: When lowering the engine ensure that the lifting eye does not scratch the torque rod.

Install the engine pad with the protective plate.

Lower the engine.

Install:

- the M10 lower screw for the engine pad.
- the 2 x heated oxygen sensor (HO2S) connectors on the subframe. Reinstall the protective plate under the steering gear.

INSTALLING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

NOTE: To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .

Install:

- both exhaust pipes
- both exhaust pipes' nuts M8.

INSTALLING THE PROTECTIVE COVER UNDER THE ENGINE

Install:

- the protective cover under the engine
- the bolts, M8 x6.

REMOVING THE LIFTING TOOL

Remove the lifting tool: see **9995716** , kit: see **9997070** and lifting hooks: see **9995460** .

INSTALLING THE ENGINE PAD, CONTINUED

Install the M10 upper nut for the engine pad.

FITTING THE BOLTS TO THE TORQUE ROD

Install the 2 x M10 screws, by the suspension turrets on both sides.

FINISHING

Remove the oil filler cap.

Install:

- the upper front engine casing
- the oil filler cap.

ENGINE MOUNT, FRONT, REPLACING

Special tools:

see **9995460**

see **9995716**

see **9997070**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

PREPARATORY WORK

Remove:

- the oil filler cap
- the upper engine casing by pulling it straight up. Fit the oil filler cap.

REMOVING THE AIR CLEANER (ACL) INLET PIPE

Fig. 355: Identifying Air Cleaner Inlet
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x2
- the air cleaner (ACL) inlet pipe

REMOVING THE PROTECTIVE COVER UNDER THE ENGINE

Fig. 356: Identifying the Protective Under Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the protective cover under the engine.

REMOVING THE BOLTS TO THE LOWER TORQUE ROD

Fig. 357: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x transmission screws for the lower torque rod.

REMOVING THE ENGINE PAD

Fig. 358: Front Engine Pad Screw
Courtesy of VOLVO CARS CORPORATION

Remove the lower screw for the engine pad.

REMOVING THE BOLTS TO THE TORQUE ROD

Fig. 359: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x screws by the suspension turret on both sides.

INSTALLING THE LIFTING TOOL

Fig. 360: Installing The Lifting Tool 9995716
Courtesy of VOLVO CARS CORPORATION

CAUTION: When lifting the engine ensure that the lifting eye does not scratch the torque rod. Tape the torque rod and keep it away from the eye.

Install lifting tool see **9995716** converted with kit see **9997070** and lifting hooks see **9995460** . Raise the engine approximately **20 mm** to relieve the load from the engine pad.

REMOVING THE ENGINE PAD, CONTINUED

Fig. 361: Identifying Engine Pad
Courtesy of VOLVO CARS CORPORATION

Remove:

- the upper nut to the engine pad, x1
- the bolts to the engine pad bracket, x3
- the bracket
- the engine pad with the protective plate.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE ENGINE PAD

CAUTION: When lifting the engine ensure that the lifting eye does not scratch the torque rod. Tape the torque rod and keep it away from the eye.

Install:

- the engine pad with the protective plate

- the bracket
- the 3 x screws for the engine pad bracket loosely
- the upper nut for the engine pad loosely. Lower the engine.

Install the lower M10 screw for the engine pad.

FITTING THE BOLTS TO THE LOWER TORQUE ROD

Install the 2 x transmission screws for the lower torque rod. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING SPLASHGUARD UNDER ENGINE

Install:

- the protective cover under the engine
- the bolts, M8 x6.

REMOVING THE LIFTING TOOL

Remove the lifting tool see **9995716** , kit see **9997070** and lifting hooks see **9995460** .

INSTALLING THE ENGINE PAD, CONTINUED

Tighten:

- the 3 x M10 screws for the engine pad bracket
- the M10 upper nut for the engine pad.

FITTING THE BOLTS TO THE TORQUE ROD

Install the 2 x M10 screws, by the suspension turrets on both sides.

INSTALLING THE AIR CLEANER (ACL) INLET PIPE

Install:

- the air cleaner (ACL) inlet pipe
- the 2 M6 screws.

FINISHING

Remove the oil filler cap.

Install:

- the upper engine cover

- the oil filler cap.

ENGINE PAD, RIGHT, REPLACEMENT

Special tools:

see **9995716**

see **9997070**

see **9995460**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

Remove:

- right-hand front wheel
- the oil filler cap
- the upper engine casing by pulling it straight up.

Fit the oil filler cap.

INSTALLING THE LIFTING TOOL

Fig. 362: Installing The Lifting Tool 9995716
Courtesy of VOLVO CARS CORPORATION

NOTE: When lifting the engine make sure that the lifting eye does not scratch the torque rod. Tape the torque rod and keep it away from the eye.

Install: see **9995716** converted with: see **9997070** and lifting hooks: see **9995460** .

Raise the engine slightly on the right-hand side so that the engine pad is unloaded.

REMOVAL

REMOVING THE WING LINER

Fig. 363: Identifying Plastic Nuts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the plastic nuts, x2
- the wing liner.

REMOVING THE ENGINE PAD

Fig. 364: Engine Mountings Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts at **A** , x2.
- the bolts at **B** , x2.
- the engine pad.

INSTALLATION

NOTE: **For tightening torques, see: TIGHTENING TORQUE .**

INSTALLING THE ENGINE PAD

Fig. 365: Engine Mountings Screws
Courtesy of VOLVO CARS CORPORATION

Install:

- the engine pad
- the bolts at **A** loosely, x2.

Lower the engine.

Fit the bolts at **B** , x2.

Tighten:

- the bolts at **A** , x2 in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the bolts at **B** , x2 in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE WING LINER

Install:

- the wing liner
- the plastic nuts, x2.

FINISHING

REMOVING THE LIFTING TOOL

Remove: see **9995716** , see **9997070** and: see **9995460** .

Remove the oil filler cap.

Install:

- the upper engine casing
- the oil filler cap
- the right-hand front wheel in accordance with: **INSTALLING WHEELS** .

SUB-FRAME FRONT, REPLACING (2005, 2006)

Special tools:

see **9995716**

see **9997070**

see **9995460**

see **9995500**

see **9997062**

see **9997076**

see **9995562**

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVAL

PREPARATORY WORK

Remove the front wheels on both sides.

REMOVING THE BOLTS TO THE TORQUE ROD

Fig. 366: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x screws by the suspension turret on both sides.

INSTALLING THE LIFTING TOOL

Fig. 367: Installing The Lifting Tool 9995716
Courtesy of VOLVO CARS CORPORATION

Remove:

- the oil filler cap
- the upper front engine casing by pulling it straight up

CAUTION: When lifting the engine ensure that the lifting eye does not scratch the torque rod. Tape the torque rod and keep it away from the eye.

Install:

- the oil filler cap
- the lifting tool: see **9995716** converted with kit see **9997070** and the lifting hooks: see **9995460** . Lift up the engine slightly so that the engine pads are unloaded.

REMOVING THE WING LINER

Fig. 368: Identifying Plastic Nuts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the plastic nuts, x2
- the wing liner.

REMOVING THE SCREWS FOR THE RIGHT-HAND ENGINE PAD

Fig. 369: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove the bolts (1), x2.

REMOVING THE PROTECTIVE PLATE

Fig. 370: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 371: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

NOTE: There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.

Raise and move the protective plate forward. Remove the protective plate.

REMOVING THE PROTECTIVE COVER UNDER THE ENGINE

Fig. 372: Identifying the Protective Under Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the protective cover under the engine.

REMOVING THE GEARBOX BOLTS TO THE LOWER TORQUE ROD

Fig. 373: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the bolts, x2.

REMOVING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

Fig. 374: Removing Exhaust Pipes
Courtesy of VOLVO CARS CORPORATION

Remove:

- both exhaust pipes' nuts
- both exhaust pipes.

REMOVING THE LOWER BOLT TO THE FRONT ENGINE PAD

Fig. 375: Front Engine Pad Screw
Courtesy of VOLVO CARS CORPORATION

Remove the lower bolt to the engine pad.

REMOVING THE ANTI-ROLL BAR LINK FROM THE ANTI-ROLL BAR ON BOTH SIDES

Fig. 376: Identifying Anti-Roll Bar Links
Courtesy of VOLVO CARS CORPORATION

Remove the anti-roll bar links from the anti-roll bar on both sides. Use: see **9995500** and a Torx wrench as counterhold to avoid damaging the rubber gaiter.

REMOVING THE DRIVE SHAFT

Fig. 377: Identifying Drive Shaft Screw Removal Using Counter Hold On Brake Disc
Courtesy of VOLVO CARS CORPORATION

Remove the bolt for the drive shaft. Use a screwdriver in the brake disc as counterhold. Tap the drive shaft into the hub slightly. Use a brass drift.

REMOVING THE LINK ARM FROM THE WHEEL SPINDLE ON BOTH SIDES

Remove the ball joint according to **BALL JOINT, REPLACING**

Fig. 378: Identifying Wheel Knuckle, Special Tools 999 7076 And 999 5562
Courtesy of VOLVO CARS CORPORATION

Detach the link arm from the ball joint pin.

Pull down the link arm. Use: see **9997076** and move the wheel spindle to the side, and install the protective sleeve: see **9995562** on the ball joint pin at the same time. Keep it in position using the ball joint nut.

REMOVING THE STEERING GEAR FROM THE SUBFRAME

Fig. 379: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame

Courtesy of VOLVO CARS CORPORATION

Remove:

- the nuts, x4
- the bolt, x1.

REMOVING THE SUBFRAME

Fig. 380: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that no pipes or cables are under load or are trapped when lowering the sub-frame.

Release:

- the 2 x heated oxygen sensor (HO2S) connectors from the rear edge of the subframe
- the heated oxygen sensor (HO2S) connector from the front edge of the subframe.

Remove the bolt to the ground cable bracket on the front edge of the subframe.

Position a lifting table under the subframe.

Remove:

- the bolts to the subframe's brackets at the rear edge
- the bolts to the subframe in the front and rear edge
- the subframe's brackets.

Release the heated oxygen sensor (HO2S) cables from the anti-roll bar.

Remove the lower coolant hose from the bracket on the subframe.

Lower the subframe carefully. Release the oil pipes to the steering gear from the clips on the subframe.

Remove the bolt to the bracket holding the pressure pipe to the steering gear on the subframe.

TRANSFERRING THE COMPONENTS

Fig. 381: Identifying Front And Rear Screws To Control Arms
Courtesy of VOLVO CARS CORPORATION

Transfer the link arms on both sides.

Install:

- the 2 x front screws to the control arms. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the rear screw to the control arms. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Transfer the anti-roll bar. Fit the bolts to the anti-roll bar, M10 x4.

Transfer the right-hand engine pad.

Fit the bolts to the engine pad, x2, in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Install a new lower torque rod with the nuts. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Install new pipe/hose holder. Transfer the bracket to the lower coolant hose. Install an M6 screw in the bracket.

INSTALLATION

INSTALLING THE SUBFRAME

CAUTION: Ensure that no pipes or cables are loaded or trapped when raising the sub-frame.

see **SUBFRAME, ADJUSTING**

Raise the subframe.

Install:

- the oil pipes to the steering gear in the clips on the subframe
- the bolt, M6, to the bracket holding the pressure pipe to the steering gear on the subframe
- the lower coolant hose in the bracket on the sub-frame.

Install the sub-frame's four screws together with the sub-frame's brackets and engine heater, if installed.

Use new screws. Lube the screws with oil.

Tighten acc. to: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . First tighten the screws on the sub-frame's left side, then on the right.

Tighten the screws for the brackets M10.

Install the heated oxygen sensor's cables on the anti-roll bar.

Remove the lifting table.

Install:

- the 2 x heated oxygen sensor (HO2S) connectors on the rear edge of the subframe
- the heated oxygen sensor (HO2S) connector on the front edge of the subframe
- the M6 screw to the ground cable mounting on the front edge of the subframe.

INSTALLING THE STEERING GEAR ON THE SUBFRAME

Install:

- the nuts, M10 x4.
- the M10 screw.

FITTING THE LOWER BOLT TO THE FRONT ENGINE PAD

Install the lower M10 screw for the engine pad.

INSTALLING THE GEARBOX BOLTS TO THE LOWER TORQUE ROD

Fit the bolts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

NOTE: **To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .**

Install:

- both exhaust pipes
- both exhaust pipes' nuts, M8.

INSTALLING THE LINK ARM ON BOTH SIDES

Install:

- the link arm. Use: see **9997076** .
- the nut. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Counterhold using a Torx wrench to prevent damaging the ball joint boot.

INSTALLING THE ANTI-ROLL BAR LINK ON BOTH SIDES

Install:

- the anti-roll bar link
- the nut. Tighten acc. to: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC**

COMPONENTS . Use socket see **9995500** and a Torx wrench as a counterhold to prevent damaging the rubber gaiter.

INSTALLING THE DRIVE SHAFT

Fit the bolt on both sides in accordance with: **TIGHTENING TORQUE** .

Use a screwdriver as counterhold.

INSTALLING THE PROTECTIVE COVER UNDER THE ENGINE

Install:

- the protective cover under the engine
- the bolts, M8 x6.

INSTALLING THE PROTECTIVE PLATE

Move the skid plate up into the bumper cover. Press forward until the mounting brackets enter the sub-frame. Install the screws.

FITTING THE BOLTS TO THE RIGHT-HAND ENGINE PAD

Fit the bolts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE WING LINER

Install:

- the wing liner
- the plastic nuts, x2.

REMOVING THE LIFTING TOOL

Remove the lifting tool see **9995716** , kit: see **9997070** and lifting hooks: see **9995460** .

FITTING THE BOLTS TO THE TORQUE ROD

Install the 2 x M10 screws, by the suspension turret on both sides.

FINISHING

Fit the front wheels on both sides in accordance with: **INSTALLING WHEELS** .

Remove the oil filler cap.

Install:

- the upper front engine casing
- the oil filler cap. Carry out wheel alignment in accordance with: **WHEEL ALIGNMENT, CHECKING / ADJUSTING** .

NOTE: **If the entire subframe has been removed for exposing other units/components, do not perform wheel alignment after installing the subframe.**

SUB-FRAME FRONT, REPLACING (2007, 2008)

Special tools:

see **9995716**

see **9997070**

see **9995460**

see **9995500**

see **9997062**

see **9997076**

see **9995562**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

PREPARATORY WORK

Remove the front wheels on both sides.

REMOVING THE BOLTS TO THE TORQUE ROD

Fig. 382: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Remove the 2 x screws by the suspension turret on both sides.

INSTALLING THE LIFTING TOOL

Fig. 383: Installing The Lifting Tool 9995716
Courtesy of VOLVO CARS CORPORATION

Remove:

- the oil filler cap
- the upper front engine casing by pulling it straight up

CAUTION: When lifting the engine ensure that the lifting eye does not scratch the torque rod. Tape the torque rod and keep it away from the eye.

Install:

- the oil filler cap
- the lifting tool: see **9995716** converted with kit see **9997070** and the lifting hooks: see **9995460** . Lift up the engine slightly so that the engine pads are unloaded.

REMOVING THE WING LINER

Fig. 384: Identifying Plastic Nuts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the plastic nuts, x2
- the wing liner.

REMOVING THE SCREWS FOR THE RIGHT-HAND ENGINE PAD

Fig. 385: Identifying Right-Hand Engine Mounting Screws
Courtesy of VOLVO CARS CORPORATION

Remove the bolts (1), x2.

REMOVING THE PROTECTIVE PLATE

Fig. 386: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 6 screws.

Fig. 387: Identifying Protective Plate
Courtesy of VOLVO CARS CORPORATION

NOTE: There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.

Raise and move the protective plate forward. Remove the protective plate.

REMOVING THE PROTECTIVE COVER UNDER THE ENGINE

Fig. 388: Identifying the Protective Under Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the protective cover under the engine.

REMOVING THE GEARBOX BOLTS TO THE LOWER TORQUE ROD

Fig. 389: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove the bolts, x2.

REMOVING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

Fig. 390: Removing Exhaust Pipes
Courtesy of VOLVO CARS CORPORATION

Remove:

- both exhaust pipes' nuts
- both exhaust pipes.

REMOVING THE LOWER BOLT TO THE FRONT ENGINE PAD

Fig. 391: Front Engine Pad Screw
Courtesy of VOLVO CARS CORPORATION

Remove the lower bolt to the engine pad.

REMOVING THE ANTI-ROLL BAR LINK FROM THE ANTI-ROLL BAR ON BOTH SIDES

Fig. 392: Identifying Anti-Roll Bar Links
Courtesy of VOLVO CARS CORPORATION

Remove the anti-roll bar links from the anti-roll bar on both sides. Use: see **9995500** and a Torx wrench as counterhold to avoid damaging the rubber gaiter.

REMOVING THE DRIVE SHAFT

Fig. 393: Identifying Drive Shaft Screw Removal Using Counter Hold On Brake Disc
Courtesy of VOLVO CARS CORPORATION

Remove the bolt for the drive shaft. Use a screwdriver in the brake disc as counterhold. Tap the drive shaft into the hub slightly. Use a brass drift.

REMOVING THE LINK ARM FROM THE WHEEL SPINDLE ON BOTH SIDES

Remove the ball joint according to **BALL JOINT, REPLACING**

Fig. 394: Identifying Wheel Knuckle, Special Tools 999 7076 And 999 5562
Courtesy of VOLVO CARS CORPORATION

Detach the link arm from the ball joint pin.

Pull down the link arm. Use: see **9997076** and move the wheel spindle to the side, and install the protective sleeve: see **9995562** on the ball joint pin at the same time. Keep it in position using the ball joint nut.

REMOVING THE STEERING GEAR FROM THE SUBFRAME

Fig. 395: Identifying Bolt And Nut Holding Steering Gear To Sub-Frame

Courtesy of VOLVO CARS CORPORATION

Remove:

- the nuts, x4
- the bolt, x1.

REMOVING THE SUBFRAME

Fig. 396: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that no pipes or cables are under load or are trapped when lowering the sub-frame.

Release:

- the 2 x heated oxygen sensor (HO2S) connectors from the rear edge of the subframe
- the heated oxygen sensor (HO2S) connector from the front edge of the subframe.

Remove the bolt to the ground cable bracket on the front edge of the subframe.

Position a lifting table under the subframe.

Remove:

- the bolts to the subframe's brackets at the rear edge
- the bolts to the subframe in the front and rear edge
- the subframe's brackets.

Release the heated oxygen sensor (HO2S) cables from the anti-roll bar.

Remove the lower coolant hose from the bracket on the subframe.

Lower the subframe carefully. Release the oil pipes to the steering gear from the clips on the subframe.

Remove the bolt to the bracket holding the pressure pipe to the steering gear on the subframe.

TRANSFERRING THE COMPONENTS

Fig. 397: Identifying Front And Rear Screws To Control Arms
Courtesy of VOLVO CARS CORPORATION

Transfer the link arms on both sides.

Install:

- the 2 x front screws to the control arms. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the rear screw to the control arms. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Transfer the anti-roll bar. Fit the bolts to the anti-roll bar, M10 x4.

Transfer the right-hand engine pad.

Fit the bolts to the engine pad, x2, in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Install a new lower torque rod with the nuts. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Install new pipe/hose holder. Transfer the bracket to the lower coolant hose. Install an M6 screw in the bracket.

INSTALLATION

INSTALLING THE SUBFRAME

CAUTION: Ensure that no pipes or cables are loaded or trapped when raising the sub-frame.

see **SUBFRAME, ADJUSTING**

Raise the subframe.

Install:

- the oil pipes to the steering gear in the clips on the subframe
- the bolt, M6, to the bracket holding the pressure pipe to the steering gear on the subframe
- the lower coolant hose in the bracket on the sub-frame.

Install the sub-frame's four screws together with the sub-frame's brackets and engine heater, if installed.

Use new screws. Lube the screws with oil.

Tighten acc. to: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . First tighten the screws on the sub-frame's left side, then on the right.

Tighten the screws for the brackets M10.

Install the heated oxygen sensor's cables on the anti-roll bar.

Remove the lifting table.

Install:

- the 2 x heated oxygen sensor (HO2S) connectors on the rear edge of the subframe
- the heated oxygen sensor (HO2S) connector on the front edge of the subframe
- the M6 screw to the ground cable mounting on the front edge of the subframe.

INSTALLING THE STEERING GEAR ON THE SUBFRAME

Install:

- the nuts, M10 x4.
- the M10 screw.

FITTING THE LOWER BOLT TO THE FRONT ENGINE PAD

Install the lower M10 screw for the engine pad.

INSTALLING THE GEARBOX BOLTS TO THE LOWER TORQUE ROD

Fit the bolts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE EXHAUST PIPES BETWEEN FRONT AND REAR CATALYTIC CONVERTERS

NOTE: **To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .**

Install:

- both exhaust pipes
- both exhaust pipes' nuts, M8.

INSTALLING THE LINK ARM ON BOTH SIDES

Install:

- the link arm. Use: see **9997076** .
- the nut. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Counterhold using a Torx wrench to prevent damaging the ball joint boot.

INSTALLING THE ANTI-ROLL BAR LINK ON BOTH SIDES

Install:

- the anti-roll bar link
- the nut. Tighten acc. to: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC**

COMPONENTS . Use socket see **9995500** and a Torx wrench as a counterhold to prevent damaging the rubber gaiter.

INSTALLING THE DRIVE SHAFT

Fit the bolt on both sides in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Use a screwdriver as counterhold.

INSTALLING THE PROTECTIVE COVER UNDER THE ENGINE

Install:

- the protective cover under the engine
- the bolts, M8 x6.

INSTALLING THE PROTECTIVE PLATE

Move the skid plate up into the bumper cover. Press forward until the mounting brackets enter the sub-frame. Install the screws.

FITTING THE BOLTS TO THE RIGHT-HAND ENGINE PAD

Fit the bolts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

INSTALLING THE WING LINER

Install:

- the wing liner
- the plastic nuts, x2.

REMOVING THE LIFTING TOOL

Remove the lifting tool see **9995716** , kit: see **9997070** and lifting hooks: see **9995460** .

FITTING THE BOLTS TO THE TORQUE ROD

Install the 2 x M10 screws, by the suspension turret on both sides.

FINISHING

Fit the front wheels on both sides in accordance with: **INSTALLING WHEELS** .

Remove the oil filler cap.

Install:

- the upper front engine casing
- the oil filler cap. Carry out wheel alignment in accordance with: **WHEEL ALIGNMENT, CHECKING / ADJUSTING** .

NOTE: **If the entire subframe has been removed for exposing other units/components, do not perform wheel alignment after installing the subframe.**

TORQUE BRACKET, ENGINE, REPLACING

REMOVAL AND INSTALLATION

REMOVING THE ENGINE BRACKET

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

Fig. 398: Removing Engine Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the engine cover by pulling it straight up
- the torque rod. See **REPLACING THE TORQUE ROD**
- the bracket for the crankcase ventilation hose
- the lifting lug
- the torque bracket.

INSTALLING THE TORQUE BRACKET

Fig. 399: Installing The Torque Bracket
Courtesy of VOLVO CARS CORPORATION

Remove:

- the torque bracket. Tighten the screw (A). Tighten to17Nm. Tighten the screws (C). Tighten to 50 Nm
- the lifting lug and the bracket for the crankcase ventilation hose. Tighten to 10Nm
- the torque rod. See **INSTALLING THE TORQUE ROD** .

  Tighten the screws on the suspension turret. Tighten to 50 Nm. Tighten the screw in the torque bracket (B). Tighten to 80 Nm

- the engine cover.

REPLACING THE TORQUE ROD

REMOVING THE TORQUE ROD

Fig. 400: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Remove

- the protective cover over the engine
- the screw for the torque rod mounting in the torque bracket on the engine
- the screws at the suspension turrets
- the torque rod.

Fig. 401: Identifying Torque Rod And Brackets
Courtesy of VOLVO CARS CORPORATION

Transfer

- the brackets (A) on the left and right-hand sides to the new torque rod. Do not tighten yet.

INSTALLING THE TORQUE ROD

Fig. 402: Engine Compartment Stabilizer (Torque Rod)
Courtesy of VOLVO CARS CORPORATION

Install

- the torque rod
- the screws for the brackets at the suspension turrets. Tighten to **50 Nm**
- the screw and nut for the torque rod mounting in the torque bracket on the engine. Tighten to **80 Nm** .

Tighten the torque rod to the brackets. Tighten to **80 Nm** .

Install the splashguard over the engine.

TORQUE ROD, LOWER, REPLACEMENT

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

Fig. 403: Identifying the Protective Under Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the bolts, x6
- the protective cover under the engine.

REMOVAL

REMOVING THE TORQUE ROD, LOWER

Fig. 404: Identifying Gearbox Bolts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the nuts, x2
- the gearbox bolts, x2
- the torque rod.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE TORQUE ROD, LOWER

Install:

- the torque rod
- the nuts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the gearbox bolts, x2. Tighten in accordance with: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

FINISHING

Install:

- the protective cover under the engine
- the bolts, x6.

ENGINE SUSPENSION (B8444S; 2009-2011)

ENGINE MOUNT REAR, REPLACING

see **ENGINE MOUNT REAR, REPLACING**

ENGINE MOUNT, FRONT, REPLACING

see **ENGINE MOUNT, FRONT, REPLACING**

ENGINE PAD, RIGHT, REPLACEMENT

see **ENGINE PAD, RIGHT, REPLACEMENT**

TORQUE BRACKET, ENGINE, REPLACING

see **TORQUE BRACKET, ENGINE, REPLACING**

TORQUE ROD, LOWER, REPLACEMENT

see **TORQUE ROD, LOWER, REPLACEMENT**

GEARBOX (B5254T2; 2003-2007)

ENGINE / GEARBOX, REMOVING

Special tools:

see **9995666**

see **9995722**

NOTE: **Since the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATION

Fig. 405: Engine Compartment Components
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery negative cable. First read, see **BATTERY, DISCONNECTING**
- the cross stay between the suspension turrets
- the turbocharger control valve from the air cleaner (ACL)
- mass air flow (MAF) sensor connector
- the brake vacuum hose from the air cleaner (ACL)
- the air cleaner (ACL) assembly. Seal the openings in the intake pipe for the turbocharger (TC)
- the plastic charge air pipe above the engine. Seal the opening in the turbocharger (TC)
- the ground strip at the top/rear of the cylinder head.

DRAINING COOLANT

Fig. 406: Identifying Radiator Drain Plug
Courtesy of VOLVO CARS CORPORATION

Position a container under the radiator drain cock.

Drain the coolant.

WARNING: Avoid skin contact with the coolant.

Close the cock.

DEPRESSURIZING THE FUEL SYSTEM

Depressurize the fuel system acc. to:**DEPRESSURIZING THE FUEL SYSTEM**.

Fig. 407: Central Electrical Unit
Courtesy of VOLVO CARS CORPORATION

Remove:

- the cover over the central electrical unit
- the connector for the engine wiring from the central electrical unit
- the positive lead for the starter motor from the terminal block
- the ground lead at the front frame member.

REMOVAL OF PARTS ON TRANSMISSION

Applies only to cars with automatic transmissions.

Remove:

- the screws for the gearbox cable bracket at the gearbox. Tie up the cable
- separate the gearbox wiring
- the oil cooler hoses for the gearbox. Seal the openings.

Fig. 408: Brake Fluid Reservoir And Clutch Master Cylinder Hose
Courtesy of VOLVO CARS CORPORATION

Applies only to cars with manual transmissions.

- Block the hose between the brake fluid reservoir and the clutch master cylinder
- Remove the retaining clip from the clutch pipe junction
- Disconnect the pipe from the junction.

NOTE: Seal the openings against impurities. Wipe up any spilled brake fluid.

Fig. 409: Engine Compartment Components - Front
Courtesy of VOLVO CARS CORPORATION

Remove:

- connectors for temperature and pressure sensor in the charge-air cooler
- the rubber hose at the intake for the charge air cooler (CAC)
- the brake vacuum hose at the intake manifold

- the lower engine coolant hose from the engine
- the plastic pipe between the throttle body (TB) and the charge air cooler (CAC)
- the dip stick pipe. Separate the wiring from the front heated oxygen sensor (HO2S). Remove the wiring from the clips and clamps.

REMOVING COMPONENTS

Fig. 410: Expansion Tank
Courtesy of VOLVO CARS CORPORATION

Disconnect the connector for the level sensor in the expansion tank.

Remove:

- the hoses for the heater unit at the terminal in the bulkhead
- the bleed hose for the radiator at the expansion tank
- the ABS line and clips from the power steering hose. Lift up the expansion tank and servo oil reservoir. Place them on top of the engine.

Fig. 411: Engine Control Module

Courtesy of VOLVO CARS CORPORATION

Remove:

- control module unit cover
- the control modules. Use mounting bracket see **9995722**
- the surround for the control module box.

REMOVING THE CONNECTOR WITH CABLE AND CABLE PROTECTOR

Fig. 412: Disconnecting Connector By Releasing Catches At Front Edge
Courtesy of VOLVO CARS CORPORATION

- Remove the red retaining clip from the connector using a screwdriver
- Disconnect the connector by releasing the catches at the front edge using pliers. Pry out the connector using a screwdriver
- Lift up the connector with the protection underneath and put it to one side
- Remove the ground cable on the right fender liner. Route the cable harness between the front plate and the AC pipe.

DISCONNECTING THE CONNECTOR

Fig. 413: Pulling Locking Plate Straight Up
Courtesy of VOLVO CARS CORPORATION

Remove:

- the right-hand headlamp by pulling up the two lock facings. Disconnect the wiring and put the wiring to one side
- the connector on the pressostat in the air conditioning (A/C) receiver drier
- the grey connector on the fan shroud. Remove the wiring from the clips and clamps on the fan shroud.

EXPOSING THE AIR CONDITIONING (A/C) COMPRESSOR

Fig. 414: Air Conditioning Compressor
Courtesy of VOLVO CARS CORPORATION

- Remove the upper radiator hose
- Unhook the auxiliaries belt
- Disconnect the one-pin connector for the compressor magnetic clutch
- Remove the four screws holding the air conditioning (A/C) compressor to the engine. Tie up the compressor in the front cover plate.

NOTE: Handle the compressor carefully, make sure that there are no kinks in the AC-pipes.

REMOVING THE LOWER STEERING SHAFT JOINT

Fig. 415: Identifying Lower Steering Shaft Joint
Courtesy of VOLVO CARS CORPORATION

- Set the front wheels so that they are straight
- Remove the soundproofing panel under the steering wheel. Fold back the floor carpet
- Bend up the outer section of the steering shaft boot
- Remove the retaining clip around the boot. Pull the boot up
- Turn the steering wheel to gain the best possible access to the steering shaft nut
- Remove the ignition key. Activate the steering wheel lock.

CAUTION: Do not move the steering wheel wince the contact reel in the SRS-system may be damaged.

Remove:

- the screw securing the mounting for the steering shaft in the joint
- the joint from the steering shaft by pressing the shaft upwards.

REMOVING COMPONENTS

Raise the car.

Remove:

- the left and right front wheels
- the splash guard under the engine.

REMOVING THE FRONT SPLASH GUARDS

- Remove the 6 screws.
- Lift up and slide the plate forward
- Remove the protective plate.

NOTE: There is a guide sleeve on the upper mounting for the plate, and this must be lifted slightly so that the panel can be slid forward.

Fig. 416: Identifying Length Of Track Rod
Courtesy of VOLVO CARS CORPORATION

Remove the track rod from the stub axle on the left and right-hand sides.

On one side, measure the length of the track rod in relation to the steering gear housing. Note the measurement.

Fig. 417: Identifying Wheel Hub Assembly And Components
Courtesy of VOLVO CARS CORPORATION

Remove on the left and right-hand sides:

- the link rod from the anti-roll bar
- the sound insulation cover for the drive shaft
- the nut holding the control arm to the ball joint
- the centre screw and the end of the drive shaft.

SEPARATING THE FUEL LINE

Fig. 418: EVAP Line Behind The Rear Right Mounting For The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

NOTE: If an engine block heater is installed, mark the fuel lines.

Separate the quick-release connectors for the fuel pressure line and engine block heater (option).

HINT: Use tool see 9995666 .

Pull apart the EVAP line at the rubber joint behind the rear right mounting for the sub-frame.

REMOVING THE THREE-WAY CATALYTIC CONVERTER (TWC)

Remove the catalytic converter according to **THREE-WAY CATALYTIC CONVERTER (TWC), REPLACING** .

REMOVING THE PROPELLER SHAFT (ALL-WHEEL DRIVE (AWD) ONLY)

Remove the propeller shaft according to **PROPELLER SHAFT, REPLACING** .

LOWERING THE ENGINE AND GEARBOX

Fig. 419: Engine Lifted Using Lifting Table
Courtesy of VOLVO CARS CORPORATION

Use a post hoist with a lifting table and stud guides. Position the lifting table against the sub-frame.

NOTE: **Make sure that the lifting table is centered under the sub-frame for optimal weight distribution. Check that the lifting table is correctly applied against the sub-frame.**

REMOVING THE ENGINE COOLANT HEATER (OPTION)

Remove:

- the bumper cover on the left hand side. Use a weatherstrip tool
- the M8 nut at the top of the left-hand wing liner for the engine coolant heater
- the connector for the engine coolant heater. Press up the engine coolant heater. Lift it out of its upper mounting.

Fig. 420: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screws for the sub-frame brackets
- screws in the sub-frame. Lower the engine/transmission unit approx. **15 cm** so that the drive shafts create a horizontal line between hub and the transmission.

CAUTION: Make sure that no hoses, wiring or anything else catches in the engine and transmission unit when it is lowered.

- Unhook the control arms from the ball joint pinion
- Hold the constant velocity joint. Pull the drive shaft off the hub
- Let the drive shafts rest against the control arms
- Turn the engine block heater out of its position
- Check that the air conditioning (A/C) compressor is hanging free. Continue lowering the engine and gearbox unit.

ENGINE/TRANSMISSION, INSTALLING

Special tools:

see **9512050**

see **9995972**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information is always correct.**

NOTE: **For tightening torques, see: TIGHTENING TORQUE .**

NOTE: **To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING .**

INSTALLING THE ENGINE AND TRANSMISSION UNIT

Fig. 421: Identifying Lifting Table, Engine And Transmission
Courtesy of VOLVO CARS CORPORATION

Raise the engine and the transmission unit. Use a lifting table with locating pins.

Stop when the sub-frame is approximately 15 cm below the frame members.

Fig. 422: Drive Shaft And Hub
Courtesy of VOLVO CARS CORPORATION

Install (left and right-hand sides):

- the drive shaft to the hub. Install the center screws. **Do not tighten yet.**
- the ball joint to the control arm. Install the nuts. **Do not tighten yet.**

NOTE: Ensure that the mating surfaces on the ball joints and control arms are clean.

Twist the engine block heater (option) into position. Check that the air conditioning (A/C) compressor is correctly positioned.

Check that the tie rod is in the correct position. Check that the transmission cable is routed between the steering shaft and the firewall.

Align the steering shaft joint with the hole in the firewall.

Lift the engine and transmission unit up to the frame members.

NOTE: Ensure that no hoses, wiring or anything else catches.

Fig. 423: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Install:

- new screw in the sub-frame. Lubricate the screws
- the washers at the front edge and the support plates at the rear edge of the sub-frame
- engine coolant heater left front (option).

Tighten the screws for the sub-frame. See **SUMMARY OF SPECIFIC COMPONENTS AND TIGHTENING TORQUES** . Use bevel protractor see **9512050** . Start on the left hand side of the sub-frame. Continue with the right hand side.

Tighten the screws for the brackets at the rear of the sub-frame. Tighten to **50 Nm** .

Remove the lifting table.

CONNECTING FUEL LINES

Fig. 424: EVAP Line Behind The Rear Right Mounting For The Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Connect the quick-release connectors and fuel line to the engine and engine block heater (option). Press the EVAP line together at the rubber joint.

INSTALLING THE ENGINE COOLANT HEATER

Install and tighten the M8 nut in the upper mounting for the engine coolant heater. Connect the connector. Install the front bumper cover.

INSTALLING THE PROPELLER SHAFT

Install the propeller shaft. See **PROPELLER SHAFT, REPLACING** .

INSTALLING THE THREE-WAY CATALYTIC CONVERTER (TWC)

Install the three-way catalytic converter (TWC). See **THREE-WAY CATALYTIC CONVERTER (TWC), REPLACING** .

ASSEMBLING THE SPRING STRUT

Fig. 425: Control Arms And The Tie Rod
Courtesy of VOLVO CARS CORPORATION

Install:

- the tie rods. Use new nuts. Tighten to **70 Nm**
- the link rod to the anti-roll bar. Use new nuts. Tighten to **50 Nm** . Counterhold using Torx 27
- the bracket for the brake pipe to the body. Tighten
- the nut for the ball joint and control arm. Tighten to **80 Nm** . Counterhold using Torx40
- the center screw in the drive shaft. Tighten to **50 Nm** .

Install:

- the front skid plate
- the lower engine splash guard
- the front wheels. See **INSTALLING WHEELS** .

INSTALLING STEERING SHAFT JOINT

Install the steering shaft joint on the steering gear and steering shaft.

Install:

- the new screw. Tighten to **25 Nm**
- the steering shaft boot and snap ring. Fold back the carpet
- soundproofing panel.

INSTALLING THE AIR CONDITIONING (A/C) COMPRESSOR

Fig. 426: Air Conditioning Compressor
Courtesy of VOLVO CARS CORPORATION

Install the 4 screws whilst the compressor is loose.

Raise the compressor and screw it into place.

NOTE: Handle the compressor carefully. Ensure that there are no kinks in the air conditioning (A/C) pipes.

Connect the one-pin connector to the compressor magnetic clutch.

INSTALLING THE CONNECTOR

Install:

- the connector on the pressostat in the air conditioning (A/C) receiver drier
- the gray connector for the fan shroud
- the wiring in the clips and clamps on the fan shroud
- the connectors for the pressure and temperature sensors on the charge air cooler (CAC)
- the right-hand headlamp using two lock facings.

INSTALLING COMPONENTS

Fig. 427: Expansion Tank
Courtesy of VOLVO CARS CORPORATION

Connect the engine wiring to the control module box.

Install:

- the ground lead to the ground terminal at the right fender edge in the engine compartment
- the auxiliaries belt
- the intermediate piece for the control module box
- the control modules. See **ENGINE CONTROL MODULE (ECM), REPLACING**
- the cover for the control module box
- expansion tank. Connect the radiator breather tube to the expansion tank. Tighten the clamp. Connect the connector for the level sensor in the expansion tank
- servo oil reservoir. Check that the hoses are correctly positioned.

Clamp the ABS cable to the power steering hose.

INSTALLING COMPONENTS ON THE TRANSMISSION

Fig. 428: Brake Fluid Reservoir And Clutch Master Cylinder Hose
Courtesy of VOLVO CARS CORPORATION

Applies to cars with manual transmissions.

Install:

- the pipe junction
- the clutch pipe in the junction. Use a new seal. Ensure that the clip locates in its channel. Remove the hose clip
- the transmission cables.

Bleed the clutch.

Use only Volvo Genuine parts brake fluid DOT 4+.

Applies to automatic transmissions.

Install:

- the transmission cable
- the oil cooler hoses.

INSTALLING COMPONENTS

Fig. 429: Coolant Hose, Pipe And Fan
Courtesy of VOLVO CARS CORPORATION

Install:

- the lower and upper coolant hoses for the engine
- the rubber hose on the charge air pipe on the intake for the charge air cooler (CAC)
- the dip stick pipe

- the brake vacuum hose to the intake
- the plastic charge air pipe between the throttle body (TB) and the charge air cooler (CAC). Tighten both the clamps.

HINT: Use a hot air gun to facilitate installation.

Fig. 430: Central Electrical Unit
Courtesy of VOLVO CARS CORPORATION

Install:

- the connector for the engine wiring to the central electrical unit
- the positive lead for the starter motor to the terminal block
- the cover over the central electrical unit
- the ground lead between the engine and body in the front frame member.

Fig. 431: Air Intake And Air Cleaner Housing
Courtesy of VOLVO CARS CORPORATION

Install:

- the ground strip at the top/rear of the cylinder head
- the plastic charge air pipe over the engine
- air cleaner (ACL) assembly
- the inlet hose for the turbocharger (TC) to the air cleaner (ACL)
- mass air flow (MAF) sensor connector
- the turbocharger control valve on the air cleaner (ACL)
- the brake vacuum hose in the clamp on the air cleaner (ACL) housing
- the intake pipe between the front cover plate and the air cleaner (ACL)
- the engine stabilizer brace between the suspension turrets
- the battery negative lead. First read, see **BATTERY, DISCONNECTING** .

FINAL CHECK

Install:

- coolant

- engine oil
- power steering fluid.

- Start the engine
- Warm up the engine until the thermostat opens
- Check for leakage
- Check the oil and coolant levels. Adjust if necessary
- Check the transmission oil level (automatic transmissions only). Top up if necessary.

TRANSAXLE (B6294T; 2003-2006)

ENGINE/TRANSAXLE, INSTALLING

Special tools:

see **9512050**

NOTE: **For tightening torques, see TIGHTENING TORQUE**

NOTE: **To ensure that there is no exhaust leakage, see: FLANGED JOINT, ASSEMBLING**

INSTALLING THE ENGINE AND TRANSMISSION UNIT

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

Fig. 432: Engine Lifted Using Lifting Table
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that no hoses, wiring or other components catch or become trapped during lifting.

CAUTION: Do not damage the brake pipe running to the right front wheel.

NOTE: Make sure that the mating surfaces on the ball joints and control arms are clean.

Lift the engine and transmission unit. Use a lifting table.

Stop the lift approximately **15 cm** before the sub-frame reaches the frame members.

- Install (on both sides) the drive shaft to the hub.
- Lift the three-way catalytic converter (TWC) up into position. Connect the exhaust system to the rear flange. Use a **new gasket** . Install **new nuts** loosely.

NOTE: The catalyst cannot be raised after the engine has been raised to its correct position.

Continue raising the engine until it is only **approximately 50 mm** from its correct position.

CAUTION: Guide the lower steering shaft into the hole in the firewall.

Align the ball joint in the control arm.

INSTALLING THE SUB-FRAME

Fig. 433: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

- Install the inner pipe on the compressor in the climate control unit. Use a new O-ring
- Raise the sub-frame toward the frame members until it makes contact.
- Install **new screws** in the subframe. Lubricate the screw threads.
- Install the washers in the front edge and support plates at the rear edge of the subframe.
- First tighten the screws on the left side of the sub-frame. Tighten to **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** . Use bevel protractor see **9512050**
- Then tighten the screws on the right-hand side of the subframe to the same value.
- Tighten the brackets. Tighten to **50 Nm** .
- Remove the lifting table.

Fig. 434: Ball Joints Nuts
Courtesy of VOLVO CARS CORPORATION

Tighten the ball joint and control arm. Tighten to **80 Nm** . Counterhold using **Torx 40** so that the ball joint boot does not rotate.

Install:

- the anti-roll bar links. Use **new locknuts** . Tighten to **50 Nm** .
- **new center screws** for the drive shafts. Tighten to **50 Nm** .

INSTALLING TRACK RODS

Fig. 435: Identifying Length Of Track Rod

Courtesy of VOLVO CARS CORPORATION

Install the tie rod using the marking made during removal. Use **new locknuts** . Tighten to **70 Nm** .

INSTALLING COMPONENTS

Fig. 436: EVAP Canister Hose
Courtesy of VOLVO CARS CORPORATION

- Connect the fuel line to the engine
- Connect the evaporative emission system (EVAP) line at the right rear sub-frame mounting.

- Install the oil cooler hoses on the transmission
- Install the propeller shaft. See **PROPELLER SHAFT, REPLACING** and **REPLACING THE BEVEL GEAR/CHAIN HOUSING**
- Lower the car
- Pull up and align the three-way catalytic converter (TWC) against the turbocharger (TC).
- Lubricate the threads using copper paste **116 1408** . Install **new nuts** loosely.
- Lower the car.

Fig. 437: Exhaust Pipe Bracket Screws
Courtesy of VOLVO CARS CORPORATION

- Install the front SIPS member. Press the brake pipe into place in the member.
- Hook the rubber mounting for the three-way catalytic converter (TWC) in the bracket on the sub-frame
- Connect the connector to the rear probe. Secure the wiring as before.

Tighten the screwed joint between the three-way catalytic converter (TWC) and the exhaust system. Tighten to **24 Nm** .

INSTALLING THE STEERING WHEEL SHAFT JOINT

Install:

- the steering shaft joint on the steering gear and steering shaft
- a **new screw** . Tighten to **25 Nm**
- the steering shaft boot and snap ring. Fold back the carpet.

Fig. 438: Prying Out Connector Plate
Courtesy of VOLVO CARS CORPORATION

Connect the engine and transmission wiring connectors to the control module box base plate.

Press the base plate into place in the lower section of the control module box.

Install:

- the climate control unit pipe at the frame member inside the control unit box. Use a new O-ring
- the cable from the engine wiring for the sensor on the receiver to the right of the radiator
- the front right headlamp.

INSTALLING THE CONTROL MODULE

Fig. 439: Locating Engine Control Module
Courtesy of VOLVO CARS CORPORATION

- Install the intermediate section. Align the ventilation pipe in the rear edge of the control module box
- Press the control modules down carefully. Lock into place using mounting bracket see **9995722**

- Press the cover into place. Screw the ground lead into place on the fender liner.

INSTALLING COMPONENTS

Fig. 440: Expansion Tank And Servo Reservoir
Courtesy of VOLVO CARS CORPORATION

Install:

- the connector for the expansion tank from the engine compartment wiring
- the hose from the engine to the expansion tank
- the breather tube from the radiator
- the expansion tank
- the servo reservoir
- the upper radiator hose.

Fig. 441: Coolant Hose, Pipe And Fan
Courtesy of VOLVO CARS CORPORATION

Install the plastic pipe between the charge air cooler (CAC) and the throttle module.

HINT: Use a hot-air gun to facilitate installation of the pipe.

Fig. 442: Installing Identified Components
Courtesy of VOLVO CARS CORPORATION

Install:

- the connector for the sensor on the charge air cooler (CAC)
- the ground lead from the engine to the car body
- the vacuum hose to the intake and power brake booster
- the connectors for the transaxle
- the transaxle cable to the transaxle
- the rear radiator hose
- the connector to the fusebox
- the battery lead to the terminal block on the fusebox.

Fig. 443: Identifying Front Section Of Terminal And Hose
Courtesy of VOLVO CARS CORPORATION

Install:

- the radiator hoses on the heater unit. They are coded and will only connect to the correct sleeve connector
- the ground strip between the engine and the car body.

INSTALLING THE HEATED OXYGEN SENSOR

Fig. 444: Heated Oxygen Sensors
Courtesy of VOLVO CARS CORPORATION

Tighten the three-way catalytic converter (TWC) to the turbocharger (TC). Use **new nuts** . Tighten to **24 Nm** .

- Install the upper heated oxygen sensors (HO2S) using the marks made during removal. Lubricate the threads. Use copper paste 116 1408. Tighten to **45 Nm**
- Lower the wiring down to the probes. Secure the wiring in the clips and clamps as before. Connect the wiring
- Install the heat deflector plates.

INSTALLING COMPONENTS CONTINUED

Fig. 445: Identifying Plastic Hoses Between Turbocharger, Charge Air Cooler & Air Cleaner/Turbocharger
Courtesy of VOLVO CARS CORPORATION

Install:

- the charge air pipes on the turbocharger (TC)
- the plastic charge air pipe over the engine
- air cleaner (ACL) assembly
- the connector for mass air flow sensor
- the turbocharger control valve on the air cleaner (ACL)
- the intake manifold to the air cleaner (ACL)
- the engine stabilizer brace between the suspension turrets.

Tighten the screws on the suspension turrets. Tighten to **50 Nm** . Tighten the screw in the torque bracket. Tighten to **80 Nm** .

INSTALLING THE BATTERY LEAD

Install the battery negative lead. First read, see **BATTERY, DISCONNECTING**

FINAL CHECKS

- Fill with coolant. The coolant volume is **approximately 7.2 liters** . Top up the engine oil
- Start the engine.
- Warm up the engine until the thermostat opens.
- Check for leakage.
- Check the oil and coolant levels. Adjust if necessary.
- Applies to cars with automatic transaxle: Check the transaxle fluid level.

FINISHING

Fig. 446: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Install:

- the splash guard under the engine
- the front skid plate on the sub-frame
- the front wheels. See **INSTALLING WHEELS**

ENGINE/TRANSAXLE, REMOVING

Special tools:

see **9995543**

see **9995722**

see **9995259**

PREPARATION

NOTE: **Since the illustrations in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the illustrations is always correct.**

Remove:

- Remove the cable from the battery negative terminal. First read, see **BATTERY, DISCONNECTING**
- The expansion tank cap.

DRAINING THE REFRIGERANT FROM THE CLIMATE CONTROL UNIT

See **REFRIGERANT, DRAINING**

REMOVING THE PROTECTIVE PLATE

Fig. 447: Splash Guard, Protective Plate And Screws
Courtesy of VOLVO CARS CORPORATION

NOTE: There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.

Remove the 6 screws.

Lift and slide the splash guard forward.

Remove the protective plate.

Fig. 448: Identifying Splash Guard
Courtesy of VOLVO CARS CORPORATION

- Remove the splash guard under the engine.
- Disconnect the connectors for the heated oxygen sensors. Remove the wiring from the clips and tie straps.
- Connect a hose to the engine coolant drain cock.
- Drain the coolant into a clean container. Close the cock.

REMOVAL OF CHARGE AIR PIPE

Fig. 449: Identifying Plastic Hoses Between Turbocharger, Charge Air Cooler & Air Cleaner/Turbocharger
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the engine stabilizer brace mounting on the engine
- the cross stay between the suspension turrets
- the plastic charge air pipe over the engine
- the charge air pipes which connect to the turbocharger (TC). Seal the openings
- the air cleaner (ACL).

REMOVING HEATED OXYGEN SENSORS (HO2S)

Fig. 450: Heated Oxygen Sensors
Courtesy of VOLVO CARS CORPORATION

NOTE: Note the position of the probes to make it easier to reinstall them. If they are mixed up, diagnostic trouble codes may be stored.

Slide the wiring for the front catalyst monitor sensors upwards and unscrew them from the catalyst. Use tool see **9995543**

REMOVING HEAT DEFLECTOR PLATES

- Remove the heat deflector plates from the turbocharger (TC)
- Remove the nuts from the flange between the turbocharger (TC) and the three-way catalytic converter (TWC).

  HINT: Use easing oil on the stud bolts.

- Separate the connections. Unhook the three-way catalytic converter (TWC)
- Remove the ground strip between the engine and bodywork which is positioned above the turbocharger (TC) for cylinders 1, 2 and 3.

REMOVING COMPONENTS

Fig. 451: Identifying Front Section Of Terminal And Hose
Courtesy of VOLVO CARS CORPORATION

Remove both the hoses for the heater unit on the bulkhead. Clean up any spilled glycol using paper.

Remove:

- the battery lead from the terminal block at the fusebox
- the connector in the fuse box.

Fig. 452: Installing Identified Components
Courtesy of VOLVO CARS CORPORATION

Remove:

- the rear radiator hose at the transaxle
- the gear selector cable from the transaxle
- the connector for the input speed sensor on the transaxle
- the connector on the transaxle
- the vacuum hose on the intake for the servo unit
- the connector on the sensor in the charge air cooler (CAC)
- the ground lead from the engine to the car body (detach in the car body).

Remove the charge air pipe on the intake between the throttle module and the charge air cooler.

HINT: If necessary use a hot air gun to loosen the pipe.

Detach the upper radiator hoses on the engine.

- Lift the power steering reservoir. Place it on top of the engine.

NOTE: Make sure that no oil leaks out from the reservoir through the ventilation holes in the cover.

- Remove the coolant expansion tank. Slacken off the hose clamp on the hose to the engine. Disconnect the connector
- Remove the radiator breather tube by the expansion tank. Put the expansion tank to one side.

REMOVING CONTROL MODULES

Fig. 453: Engine Control Module
Courtesy of VOLVO CARS CORPORATION

Remove:

- the cover from the distribution box
- control modules using tool see **9995722**
- the surround from the distribution box.

Fig. 454: Prying Out Connector Plate
Courtesy of VOLVO CARS CORPORATION

Pry out the connector plate from the lower section of the control module box and pull the connectors of the engine and transmission wiring from the plate.

Detach the ground lead on the wing liner.

CAUTION: Seal the openings.

Separate the climate control unit pipe at the frame member inside the central electrical unit.

REMOVING HEADLAMP

Fig. 455: Pulling Locking Plate Straight Up
Courtesy of VOLVO CARS CORPORATION

Remove the right-hand headlamp by pulling the 2 lock facings on the lamp straight up. Then carefully pull the headlamp forward. Disconnect the connector and lift out the headlamp.

Disconnect the connector from the sensor on the accumulator. Pull the wiring through to the engine compartment.

REMOVING THE LOWER STEERING SHAFT JOINT

Fig. 456: Identifying Lower Steering Shaft Joint
Courtesy of VOLVO CARS CORPORATION

Set the front wheels so that they are straight

- Fold the floor carpet out of the way.
- Bend up the outer section of the steering shaft boot.
- Remove the retaining clip around the boot.
- Pull the boot up.
- Turn the steering wheel to gain the best possible access to the steering shaft nut.
- Remove the ignition key. Activate the steering wheel lock.

CAUTION: Do not move the steering wheel since the contact reel in the SRS-system may be damaged.

Remove:

- the screw securing the mounting for the steering shaft in the joint
- the joint from the steering shaft by pressing the shaft upwards.

NOTE: Clean and spray the exposed threads with rustproofing agent before beginning

removal.

Fig. 457: Identifying Steering Arm Track Rod End
Courtesy of VOLVO CARS CORPORATION

Carry out the following operations on the left and right-hand sides.

Remove:

- the front wheel
- the track rod ends from the steering arm. Use puller see **9995259**
- the screw holding the drive shaft to the hub.
- the nut of the ball joint/link arm.
- the nut for the anti-roll bar.

NOTE: Counterhold using Torx 40 so that the ball joint boot does not turn when the nut is removed.

Fig. 458: Identifying Length Of Track Rod
Courtesy of VOLVO CARS CORPORATION

CAUTION: The steering shaft must not be turned. The contact reel in the SRS-system may be damaged.

On one side, measure the length of the track rod in relation to the steering gear housing. Note the measurement.

Fig. 459: Exhaust Pipe Bracket Screws
Courtesy of VOLVO CARS CORPORATION

- Disconnect the brake pipe from the clips on the front SIPS member.
- Remove the 4 screws for the front SIPS member
- Remove the member.
- Unhook the three-way catalytic converter (TWC) from the rubber mounting.

PAY ATTENTION TO THE FOLLOWING WHEN REMOVING PROPELLER SHAFT

Follow instructions. See **PROPELLER SHAFT, SPECIAL INFORMATION**

REMOVING THE PROPELLER SHAFT

Remove:

- the tie straps from the wiring for the rear probe. Separate the probe wiring
- the nut for the flange between the three-way catalytic converter (TWC) and exhaust system
- the propeller shaft. See **PROPELLER SHAFT, REPLACING** and **REPLACING THE BEVEL**

GEAR/CHAIN HOUSING

DRAINING THE FUEL LINE

Fig. 460: EVAP Canister Hose
Courtesy of VOLVO CARS CORPORATION

- Depressurize the fuel system acc. to **DEPRESSURIZING THE FUEL SYSTEM**.
- Disconnect the fuel line quick-release connector at the engine

  Seal the openings against dirt.

- Put the line to the side.
- Separate the EVAP canister cable at the rear right sub-frame mounting
- Remove the transaxle oil cooling hoses from the gearbox. Seal the openings.

LOWERING THE ENGINE/TRANSMISSION UNIT

Fig. 461: Engine Lifted Using Lifting Table
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the lifting table is properly centred under the engine.

Position a lifting table under the sub-frame. Secure the table against the sub-frame.

Fig. 462: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

CAUTION: Do not damage the brake pipe that runs across the propeller shaft tunnel.

Remove:

- the screws of the subframe brackets.
- the screws for the sub-frame. Lower the engine and gearbox approximately **15 cm** so that the drive shafts describe a horizontal line between the hub and gearbox.

NOTE: Take great care that no hoses, wiring, or anything else catches in the engine/transmission unit when it is lowered.

Unhook the link arms from the ball joint pin.

Remove the drive shafts from the wheel hubs.

NOTE: Do not pull on the drive shafts. They do not have axial locks.

Do not damage the ABS-wiring.

Do not damage the brake pipe.

Let the drive shafts rest against the control arms. Lower the three-way catalytic converter (TWC).

Continue lowering until the hose for the compressor in the climate control unit is accessible. Detach the inner hose for the climate control unit. Seal the openings. Continue lowering the unit.

BONDED WINDOW, GENERAL SAFETY INFORMATION

HANDLING

WARNING: **INHALED : Polyurethane (PU) adhesive can cause asthma like symptoms. Isocyanate vapor from primer or PU adhesive can cause allergies in the respiratory tract.**

WARNING: **INHALED : Persons having a respiratory allergy may have an allergic reaction when handling polyurethane (PU) adhesive.**

WARNING: **Cured polyurethane (PU) adhesive can degrade if subjected to high temperatures. Isocyanide compounds can be released when grinding or welding in close proximity to cured PU adhesive.**

WARNING: **Use a fresh air mask.**

WARNING: **Wear protective gloves.**

ACCESSORIES AND BODY, CAB

Exterior Trim, Glass, Weatherstrips - Installation Instructions, Accessories

ALUMINUM DOOR SILL TRIM STRIP (2005-2011)

ALUMINUM DOOR SILL TRIM STRIP

REMOVE / INSTALL

Fig. 1: Heating Door Sill Trim Strip Using Hot-Air Gun
Courtesy of VOLVO CARS CORPORATION

- Clean the door sills where the new door sill trim strips are to be installed
- Heat the door sill trim strip using a hot-air gun to approximately 60°C. At the same time detach the door sill trim strip. Use a plastic weatherstrip tool. Do not damage the painted surfaces.

Fig. 2: Heat & Remove Remaining Pieces Of Tape

Courtesy of VOLVO CARS CORPORATION

- Heat and remove the remaining pieces of tape.

Fig. 3: Cleaning Surfaces Where New Door Trim Strip Is To Be Installed
Courtesy of VOLVO CARS CORPORATION

- Clean the surfaces where the new door trim strip is to be installed. Use a mixture of 30 % windscreen washer fluid and 70% water. Wipe dry.

Fig. 4: Identifying Small Piece Of Masking Tape Pulled Off Of Sill Trim
Courtesy of VOLVO CARS CORPORATION

- Take the door sill trim strip from the kit. Pull off a small piece of masking tape.

Fig. 5: Identifying Position And Alignment Of Door Sill Trim Strip
Courtesy of VOLVO CARS CORPORATION

- Carefully position and align the door sill trim strip in place of the old door sill trim strip
- Press the front edge so that the tape adheres
- Pull off the masking tape whilst maintaining the position of the door sill trim strip. Press the trim after removing the masking tape.

Fig. 6: Identifying Door Sill Trim Strip Secured In Position
Courtesy of VOLVO CARS CORPORATION

- Secure the door sill trim strip securely in position. Use a pressure of 2 kg/cm^2 along the entire length of the door sill trim strip.

NOTE: **Work must be carried out at a temperature of at least 20°C (68°F). Leave the car indoors for 2 hours after carrying out the work. Do not wash the car for 48 hours.**

RUNNING BOARD (2003-2011)

RUNNING BOARD

REMOVE / INSTALL

Fig. 7: Identifying Running Board
Courtesy of VOLVO CARS CORPORATION

- Wash clean under the door sills, in front of the rear wheels and behind the front wheels, on the right and left-hand sides.
- Raise the car.

NOTE: Ensure that the lifting tool does not block the location where the Running board is to be attached.

- Remove the two M10 screws from the front bottom flange and the two M12 screws at the rear, on the right and left-hand sides. Place the screws to one side, they will not be reused.
- Clean the mating surfaces, where the Running board is to be attached, from dirt and any underseal.

Fig. 8: View Of Aluminum Profile And Mounting Brackets
Courtesy of VOLVO CARS CORPORATION

- Take an aluminum profile, one mounting for each, four M8 screws and washers from the kit. Install the mountings in the aluminum profile as illustrated and screw in the four M8 screws. Check that there is no play between the aluminum profile and the mounting brackets at (A). Torque tighten the M8 screws to **25 Nm (19 lbf. ft)** .
- Perform the same for the other aluminum profile.

INSTALL

Fig. 9: View Of Installing Running Boards
Courtesy of VOLVO CARS CORPORATION

HINT: It is recommended that two people help when installing the Running board.

- Install the Running board with the M10 (1) and M12 (2) screws with relevant washers.

Fig. 10: Identifying Running Board Mounting Screws
Courtesy of VOLVO CARS CORPORATION

- Tighten the M10 (1) screws to **50 Nm (37.5 lbf. ft)** and the M12 (2) to **80 Nm (60 lbf. ft)** .

RUNNING BOARD, FOOT STEP

NOTE: **During installation the underlying surface must be kept at a temperature of at least +15°C (59°F).**

Do not wash the car within 48 hours after installation is completed.

Allow the car to remain inside for at least two hours after installation is completed if outside temperature is less than +15°C (59°F).

PREPARATION

Fig. 11: Wash Running Board
Courtesy of VOLVO CARS CORPORATION

- Wash the "Running board" clean on the top and along the sides.
- Wipe dry.

Fig. 12: Measuring Front Joint Running Board
Courtesy of VOLVO CARS CORPORATION

- Measure **170 mm (6 11/16")** from the front joint between the "Running board" profile and the mounting as illustrated.
- Mark with pencil.

Fig. 13: Measuring Rear Joint Running Board
Courtesy of VOLVO CARS CORPORATION

- Measure **70 mm (2 3/4")** from the rear joint between the "Running board" profile and the mounting as illustrated.
- Mark with pencil.

Fig. 14: View Of Aligned Foot Steps
Courtesy of VOLVO CARS CORPORATION

- Align the foot steps to the "Running board" with the outer edge at the pencil markings and in toward the center of the "Running board" as illustrated.
- Check that the foot step is correctly aligned and draw around it with a whiteboard pen.

INSTALL

Fig. 15: View Of Foot Step Protective Strips
Courtesy of VOLVO CARS CORPORATION

- Remove the protective film from the three strips of tape.

Fig. 16: Applying Foot Step Above Running Board
Courtesy of VOLVO CARS CORPORATION

- Hold the foot step slightly above the "Running board", inside the markings drawn. Align the foot step in relation to the "Running board" and check that the cut-outs in the foot step are opposite the raised areas in the "Running board".
- Lower the foot step and press it firmly into the "Running board".

NOTE: Take care with the fit as the tape on the underside of the foot step adheres immediately on contact with the surface.

- Repeat the above for both sides and for all foot steps.
- Wash away the markings.

DECOR PANEL, EXTERIOR (2006-2011)

NOTE: Do not do the work at a temperature below 20°C (68°F).

INSTALLING THE DECOR PANEL

DOOR MIRRORS

Fig. 17: Pry Loose The Mirror Glass With Weatherstrip
Courtesy of VOLVO CARS CORPORATION

- Carefully pry loose the mirror glass using a weatherstrip tool.

Fig. 18: Pry Out Mirror With Screwdriver
Courtesy of VOLVO CARS CORPORATION

- Carefully pry out the mirror cover using a small screwdriver.

NOTE: Do not damage the wiring for the mirror glass or the damper blade.

Fig. 19: Reinstall The Mirror Glass
Courtesy of VOLVO CARS CORPORATION

- Reinstall the mirror glass.

NOTE: Ensure that the damper blade fits in its cradle.

Fig. 20: Install The New Cover
Courtesy of VOLVO CARS CORPORATION

- Install the new cover.
- Repeat the steps for the other mirror.

REAR SIDE WINDOW

Fig. 21: Lift Up Rear End Of Weatherstrip On Rear Doors
Courtesy of VOLVO CARS CORPORATION

- Lift up the rear end of the weatherstrip on the rear doors so that the hooks release. Lift it up further and turn it out from the window.

NOTE: Take care not to bend the metal strip.

Fig. 22: View Of Rear Edge Panel
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the panel at the rear edge using a weatherstrip tool until the two clips at the top and bottom release.

Fig. 23: Cutting Off The Panel's Front Edge
Courtesy of VOLVO CARS CORPORATION

- Turn the panel out at the rear edge so that the tape at the front edge can be cut off.
- Now carefully cut off the panels front edge from the tape from the top and down.

NOTE: Place the piece against the panel to prevent cutting through the paint.

Fig. 24: View Of Tape Removal With Hot Air Gun
Courtesy of VOLVO CARS CORPORATION

- Remove the remaining pieces of tape. Use a hot air gun to soften the tape.

NOTE: Do not damage the rubber strip when using the hot air gun.

- Clean the marked surface using isopropanol and wipe dry.

Fig. 25: Identifying The Decor Panel Protective Tape
Courtesy of VOLVO CARS CORPORATION

- Remove the protective tape from the decor panel.

Fig. 26: View Of Positioning Panel Clips Into Holes
Courtesy of VOLVO CARS CORPORATION

- Position the panel clips in the holes in the door arch and press into place.

Fig. 27: View Of Decor Strip Firmly Onto The Clips And Tape
Courtesy of VOLVO CARS CORPORATION

- Press the decor strip firmly onto the clips and tape.

Fig. 28: View Of Pressing Weatherstrip Into Place
Courtesy of VOLVO CARS CORPORATION

- Press the weatherstrip into place. Ensure that the hook at the rear edge engages in the hole in the door arch.
- Repeat the steps for the other side window.

BUMPER COVER

Fig. 29: View Of Bumper Cover Grille
Courtesy of VOLVO CARS CORPORATION

- Remove the bumper cover grille on both sides by carefully pulling them off using tool **part no. 9512943** .

Fig. 30: Clean The Bumper Cover
Courtesy of VOLVO CARS CORPORATION

- Clean the bumper cover where the decor moldings are to be secured.

Fig. 31: Pressing Decor Panel Into Place
Courtesy of VOLVO CARS CORPORATION

- Align the decor panel in the cut-out and press it into place. Ensure that all hooks engage.
- Repeat the operation on the other side.

Fig. 32: View Of Protective Tape Along Lower Edge Of Center Grill
Courtesy of VOLVO CARS CORPORATION

- Apply a piece of tape as protection along the lower edge of the central grille.

Fig. 33: Identifying Long Decor Molding
Courtesy of VOLVO CARS CORPORATION

- Take a long decor molding from the kit. Place the upper side of the long horizontal plate in the grille and secure it.

Fig. 34: View Of Lower Side Of The Plate Using A Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Hold the lower side of the plate using a weatherstrip tool and at the same time press the upper side of the decor molding until the catches engage the plate. A click should be clearly heard.
- Repeat this along the entire decor molding.
- Remove the tape strip.

TAIL LAMP

Fig. 35: Clean The Lower Edge Of The Tail Lamp
Courtesy of VOLVO CARS CORPORATION

- Clean the lower edge of the tail lamp using isopropanol. Wipe dry.

Fig. 36: View Of Cardboard Between Lower Edge Of Tail Lamp
Courtesy of VOLVO CARS CORPORATION

- Cut off a few pieces of cardboard and insert them between the lower edge of the tail lamp and the panel.

Fig. 37: View Of Decor Molding Tail Lamp Tape
Courtesy of VOLVO CARS CORPORATION

- Take one of the decor moldings for the tail lamp from the kit. Remove a small piece of protective tape from the longer part of the molding.

Illustration A

Fig. 38: View Of Molding Against Tail Lamp
Courtesy of VOLVO CARS CORPORATION

- Position the molding against the tail lamp and the cardboard pieces so that the angled corner of the molding aligns with the corner of the tail lamp (1).
- Press the molding against the tail lamp where the tape was removed (2).

Illustration B

Fig. 39: Pulling Off Protective Tape From Molding
Courtesy of VOLVO CARS CORPORATION

- Hold the molding in position against the cardboard pieces and then pull off the protective tape at the same time as pressing the molding down.

  Continue until the entire molding has been secured in place.

- Remove the cardboard pieces.

Fig. 40: View Of Securing The Molding Properly On The Tail Lamp
Courtesy of VOLVO CARS CORPORATION

- Now secure the molding properly on the tail lamp along its entire length.
- Repeat the steps for the other tail lamp.

GRILLE, FRONT (2003-2009)

GRILLE, FRONT

PREPARATION

Fig. 41: Identifying Engine Hood
Courtesy of VOLVO CARS CORPORATION

- Open the engine hood.

Fig. 42: Identifying Mounting Hooks
Courtesy of VOLVO CARS CORPORATION

- Release the mounting hooks and pull out the grille.

Fig. 43: Cleaning Old Grille Location
Courtesy of VOLVO CARS CORPORATION

- Clean the area where the old grille was located.

INSTALL

Fig. 44: Installing New Grill
Courtesy of VOLVO CARS CORPORATION

- Take a new grille from the kit. Ensure that all catches engage.

MIRROR, COVER (2007-2011)

MIRROR, COVER

Fig. 45: Identifying Pry Tool To Remove Mirror Glass
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the mirror glass.

Fig. 46: Identifying Removal Of Mirror Cover
Courtesy of VOLVO CARS CORPORATION

- Press out the mirror's cover using a small screwdriver.
- Remove the cover. New cover is included in the kit.

Fig. 47: Identifying Mirror Glass
Courtesy of VOLVO CARS CORPORATION

- Make sure that the damper blades end up in their grooves.
- Carefully press the mirror glass into place.

A, B, and C

Fig. 48: Installation Of Mirror Cover (1 Of 3)
Courtesy of VOLVO CARS CORPORATION

- Press the new cover on the mirror. Press all the way around so that all catches engage.
- Repeat on the car's other side.

Fig. 49: Identifying Catches
Courtesy of VOLVO CARS CORPORATION

Fig. 50: Pressing In Cover
Courtesy of VOLVO CARS CORPORATION

MIRRORS, FOLDABLE (2009-2011)

MIRRORS, FOLDABLE

PREPARATIONS

Fig. 51: Identifying Ignition Switch Turned To Position 0
Courtesy of VOLVO CARS CORPORATION

- Turn the ignition key to position 0.

NOTE: **Wait at least three minutes before unplugging the connectors or removing other electrical equipment.**

Fig. 52: Pry Off The Handle Using A Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the handle using a weatherstrip tool. Start on one side.

Illustration A

Fig. 53: Identifying Door Panel Screws
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the panel at the front edge of the side window.
- Remove the two screws holding the door panel.
- Carefully pull off the door panel. It is secured by surrounding clips.

Illustration B

Fig. 54: View Of Handle Wire Connector
Courtesy of VOLVO CARS CORPORATION

- Detach the wire from the opening handle and disconnect the connectors.

Fig. 55: Identifying Removal Of Door Mirror Nut
Courtesy of VOLVO CARS CORPORATION

- Remove the nut, disconnect the connector and remove the mirror.

Fig. 56: Identifying Removal Of Door Mirror Glass
Courtesy of VOLVO CARS CORPORATION

- Carefully pry off the mirror glass.

Fig. 57: Disconnecting Mirror Glass Cables
Courtesy of VOLVO CARS CORPORATION

- Carefully disconnect the two cables from the mirror glass. The glass will be reused.

Fig. 58: Identifying Removal Of Door Mirror Cover
Courtesy of VOLVO CARS CORPORATION

- Press the mirror cover out using a small screwdriver. The cover is to be reused.

Fig. 59: Identifying Removal Of Mirror Motor Screw
Courtesy of VOLVO CARS CORPORATION

- Remove the screw holding the mirror motor.

Fig. 60: Identifying Removal Of Mirror Motor
Courtesy of VOLVO CARS CORPORATION

- Detach the motor by carefully prying up the catches at the side and underneath using a small screwdriver.
- Unhook the motor from the remaining catches and disconnect the connector. The motor is to be reused.

Fig. 61: Identifying Indicator Lamp From The Mirror Housing
Courtesy of VOLVO CARS CORPORATION

- Carefully detach the indicator lamp from the mirror housing. It is secured by surrounding catches.

Fig. 62: Identifying Bulb Socket From Indicator Lamp
Courtesy of VOLVO CARS CORPORATION

- Detach the socket with the bulb from the indicator lamp. The indicator lamp is to be reused.

INSTALLATION

Fig. 63: Identifying Installation Of Bulb
Courtesy of VOLVO CARS CORPORATION

- Take a new mirror housing, bulb and lamp lens for ground lighting from the kit.
- Take out the cable with bulb holder from the mirror. Press a bulb into the holder.

Fig. 64: Identifying Installation Of Bulb Holder With Bulb
Courtesy of VOLVO CARS CORPORATION

- Install the socket with bulb into the lamp lens.

Fig. 65: Identifying Installation Of Lamp Glass
Courtesy of VOLVO CARS CORPORATION

- Install the ground lighting in the mirror housing.

Fig. 66: Identifying Indicator Lamp Bulb
Courtesy of VOLVO CARS CORPORATION

- Press the socket with the bulb into the indicator lamp.

Fig. 67: Reinstall The Indicator Lamp
Courtesy of VOLVO CARS CORPORATION

- Reinstall the indicator lamp in the mirror housing.

Fig. 68: Identifying Installation Of Mirror Motor
Courtesy of VOLVO CARS CORPORATION

- Connect the connector and install the mirror motor in the mirror housing. Ensure that all catches engage.

Fig. 69: Identifying Installation Of Mirror Motor Screw
Courtesy of VOLVO CARS CORPORATION

- Install the screw to the mirror motor and tighten.

Illustration A

Fig. 70: Identifying Installation Of Door Mirror Cover (1 Of 3)
Courtesy of VOLVO CARS CORPORATION

Illustration B

Fig. 71: Identifying Installation Of Door Mirror Cover (2 Of 3)
Courtesy of VOLVO CARS CORPORATION

Illustration C

Fig. 72: Identifying Installation Of Door Mirror Cover (3 Of 3)
Courtesy of VOLVO CARS CORPORATION

- Press the old cover into the mirror housing. Press all the way around so that all catches engage.

Fig. 73: Connecting Mirror Glass Cables
Courtesy of VOLVO CARS CORPORATION

- Connect the wiring to the old mirror glass.
- Ensure that the white damper blades align in their grooves.
- Press the mirror glass into place.

Fig. 74: Identifying Installation Of Door Mirror
Courtesy of VOLVO CARS CORPORATION

- Install the new mirror.

Illustration A

Fig. 75: Install Door Panel Screws
Courtesy of VOLVO CARS CORPORATION

Illustration B

Fig. 76: Installing Door Handle
Courtesy of VOLVO CARS CORPORATION

- Check that the clips around the panel are intact and correctly positioned, they are detachable.
- Connect the connectors and the wire to the opening handle.
- Align the clips in the holes in the door frame carefully and press securely.
- Tighten the panel using the two screws, tightening torque **10 Nm (7.5 lbf. ft.)**
- Secure the panel at the front edge of the side window.

Illustration A

Fig. 77: Securing Front Edge Of Handle
Courtesy of VOLVO CARS CORPORATION

- First secure the front edge of the handle.

Illustration B

Fig. 78: Press Handle On Both Sides
Courtesy of VOLVO CARS CORPORATION

- Then hold the handle and press on both sides.

Fig. 79: Identifying VIDA (Service Information) To Program Software
Courtesy of VOLVO CARS CORPORATION

- Download the software for the accessory's function following the service information in VIDA (Volvo scan tool).

Exterior Trim, Glass, Weatherstrips - Removal, Replacement And Installation

DOOR MIRRORS (2003-2006)

REAR VIEW MIRROR, REPLACING

REMOVE

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

DOOR MIRROR

Fig. 1: Identifying Nut And Rear View Mirror
Courtesy of VOLVO CARS CORPORATION

Remove:

- the cover
- the door panel. See **PANEL FRONT SIDE DOOR, REPLACING** .

Separate the connector.

Remove:

- a nut
- the rear view mirror.

REMOVE MIRROR GLASS

Fig. 2: Folding Mirror Glass Forwards And Inwards
Courtesy of VOLVO CARS CORPORATION

Fold the mirror glass forwards and inwards as shown in the illustration.

Grasp and pull the mirror glass lengthways until it releases.

Work the glass out.

Disconnect the terminal pins from the mirror glass.

REMOVE ELECTRIC MOTOR

Fig. 3: Identifying Mirror Glass, Screws, And Connectors
Courtesy of VOLVO CARS CORPORATION

Remove:

- the mirror glass
- three screws.

Separate the connectors.

NOTE: Note the positions of the connectors.

INSTALL

INSTALL ELECTRIC MOTOR

Install:

- the connectors
- the three screws
- the mirror glass.

INSTALLING MIRROR GLASS

Fig. 4: Hooking Mirror Glass Into Inner Mounting
Courtesy of VOLVO CARS CORPORATION

Install the terminal pins.

Fold out the mirror mounting on the motor.

Hook the mirror glass into the inner mounting.

Press the mirror glass into place.

INSTALLING DOOR MIRROR

Install:

- the door mirror
- the nut
- the connector
- the door panel. See **PANEL FRONT SIDE DOOR, REPLACING**
- the cover.

DOOR MIRRORS (2007-2011)

COVER, EXTERNAL MIRROR

REMOVE

Loosen the mirror glass, see **MIRROR, REAR VIEW MIRROR**

EXTERNAL REAR BADGE (B8444S; 2007-2008)

BADGE REAR, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE BADGE

Heat the badge carefully. Use a hot-air gun.

Carefully lift up one edge of the badge.

CAUTION: Do not damage the vehicle's paintwork.

Remove:

- the badge
- any tape residue.

INSTALLATION

INSTALLING THE BADGE

Ensure that the vehicle is at least at room temperature (above +20 °C).

Wash the area for the badge. Use a mixture of 50% isopropanol and 50% water.

Wipe dry using a clean lint-free cloth or similar.

CAUTION: In order for the badge to secure, the surface must be completely clean and free from dust and grease.

Remove the backing from the tape.

NOTE: Leave the foil in place.

Guide the badge into the position indicated in the dimensions. Press the whole badge to ensure the tape is in good contact with the base.

Use the following measurements:

Fig. 22: Identifying Volvo Badge
Courtesy of VOLVO CARS CORPORATION

Volvo badge

M1 = 538 ± 1.5 mm

M2 = 26 ± 1 mm

Fig. 23: Identifying Model designation Badge
Courtesy of VOLVO CARS CORPORATION

Model designation

M3 = 57.5 ± 1 mm

M4 = 32.5 ± 1 mm

Fig. 24: Identifying Engine Designation Badge
Courtesy of VOLVO CARS CORPORATION

Engine designation

M9 = 27.5±1 mm

M10 = 51 ± 2 mm

M11 = 91 ± 1 mm

M12 = 60 ± 2 mm

Check that the edges of the badge are against the base. There must be no gaps.

Remove the securing foil.

NOTE: **Do not wash the car for 72 hours to ensure optimal adhesion. It gradually increases.**

EXTERNAL TRIM COMPONENTS, EMBLEM, REFLEX (2004-2011)

DECAL JUBILEE CAR, REPLACING (2006-2011)

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE DECAL FROM THE JUBILEE CAR

Carefully heat the decal. Use a hot-air gun.

Carefully lift one edge of the decal using a weatherstrip tool.

CAUTION: Do not damage the car paintwork.

Fig. 25: Identifying Edge Of Decal Raised With Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

Remove:

- the decal
- any tape residue.

INSTALLING THE DECAL ON JUBILEE CARS

NOTE: Always use a new decal.

The temperature of the surface to which the decal will be attached must be at least +20 °C.

Wash the area for the badge. Use a 50/50 mixture of isopropanol and water.

Wipe clean and dry using a lint-free cloth.

NOTE: In order for the decal to secure, the surface must be clean and free of dust and grease.

Remove the backing from the decal.

Guide the decal into the position indicated in the dimensions. Press the whole decal to ensure the tape is in good contact with the base and to work out any air bubbles.

Fig. 26: Identifying Decal Mounting Location
Courtesy of VOLVO CARS CORPORATION

Use the following measurements:

M1 = 67±1 mm, from the front door edge

M2 = 35±1 mm, from the lower edge of the trim molding

Check that the edge of the decal is in contact with the surface and properly secured.

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

EMBLEM (EXECUTIVE/PREMIER), REPLACEMENT

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVAL

REMOVING THE BADGE

Fig. 27: Identifying Badge Location
Courtesy of VOLVO CARS CORPORATION

CAUTION: Do not damage the car paintwork.

Use a hot-air gun to carefully heat up the badge.

Carefully lift up one edge of the badge.

Remove:

- the badge
- any tape residue.

INSTALLATION

INSTALLING THE BADGE

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

NOTE: In order for the badge to secure, the surface must be clean and free of dust and grease. Guide the badge into the position indicated in the dimensions. Press the whole badge to ensure the tape is in good contact with the base. Check that the edges of the badge are against the base.

Use the following dimensions for the executive badge:

M1 = 15+/-1 mm (0.59") M2 = 42+/-1 mm (1.65")	

Ensure that the car is at least at room temperature (>20°C). Wash the area for the badge. Use a 50/50 mixture of isopropanol and water.

Wipe clean and dry using a lint-free cloth.

REAR WINDOW MOLDING (2007-2011)

Materials:	
Designation	**Part number**
Cleaning agent	9192 678-2

Fig. 28: View Of Rear Window Molding
Courtesy of VOLVO CARS CORPORATION

FINISHING

Fig. 29: Cleaning Agent, 9192 678-2
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the mating surfaces are clean.

Use: Cleaning agent, 9192 678-2 , x 3.

CAUTION: Make sure that all mating faces are free of moisture.

CAUTION: Apply even pressure along the entire component.

NOTE: **Make sure that the mating faces are at a minimum temperature of 16 °C (60.8 ° F).**

NOTE: **Make sure that the customer is advised not to wash the vehicle within the next 72 hours.**

SILL PANEL SPORT (2007-2011)

NOTE: **Removal steps in this procedure may contain installation details.**

REMOVE

Remove the front and rear wheels.

Fig. 30: Identifying Sill Panel Sport Rivet Location (1 of 3)

Install in reverse order.

GLASS AND WEATHER-STRIP FOR WINDSCREEN AND REAR WINDSCREEN (2003-2005)

COWL, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE PLENUM CHAMBER

Fig. 38: Identifying Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the windshield wipers. See **WIPER ARM / BLADE WINDSHIELD, REPLACING**
- the 6 clips.

Press the center section of the rivet head on the four front clips.

Lift up the center section of the other two clips.

Lift out the cowl.

INSTALLING THE PLENUM CHAMBER

Install the cowl.

NOTE: **Check that the guide clips underneath the cowl are in the correct position in relation to the windshield.**

Install:

- the 6 clips
- the windshield wipers. See **WIPER ARM / BLADE WINDSHIELD, REPLACING** .

TAILGATE WINDSHIELD, REPLACING

see **TAILGATE WINDSHIELD, REPLACING**

Fig. 63: Identifying Time And Temperature Requirements For Adhesive To Dry
Courtesy of VOLVO CARS CORPORATION

WARNING: **Wait for the specified time at the specified temperature before moving the car.**

Install the following items:

- plenum chamber. See **COWL, REPLACING**
- rain sensor. See **RAIN SENSOR**

GLASS AND WEATHER-STRIP FOR WINDSCREEN AND REAR WINDSCREEN (2006-2011)

COWL, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE PLENUM CHAMBER

Fig. 64: Identifying Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the windscreen wipers. See **WIPER ARM / BLADE WINDSHIELD, REPLACING**
- the 6 clips.

Press in the center of the rivet head. Remove the four front clips.

Fig. 65: Identifying Outer Clip(s) Removal
Courtesy of VOLVO CARS CORPORATION

Remove both the outer clips.

Lift out the cowl.

INSTALL PLENUM CHAMBER

Install in the reverse order.

NOTE: **Check that the guide clips underneath the cowl are in the correct position in relation to the windscreen.**

TAILGATE WINDSHIELD, REPLACING

Special tools:

see **9512337**

see **9512925**

NOTE: **The illustrations in this service information are used for different model years and / or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE REAR WINDSHIELD

Remove:

- the stop lamp
- the panels. See **PANEL, TAILGATE, REPLACING**

- the tailgate wiper. See **TAILGATE WIPER ARM / BLADE, REPLACING** .

Disconnect the heating cables for the rear windshield.

Fig. 66: View Of Wire Inserter In The Upper Left-Hand Corner
Courtesy of VOLVO CARS CORPORATION

Insert a wire inserter in the upper left-hand corner as shown in the illustration.

Cut off approximately four meters of wire from the roll.

Secure the wire and pull the ends approximately 50 cm into the car.

Pull the wire around and downwards so it forms an eyelet around the outside of the windshield.

Check that the wire is at the bottom against the bead of adhesive.

Stretch the wire so it is still in position at the bottom. Pull in the excess from one end of the wire.

Fig. 67: View Of Wire Against Locating Pins
Courtesy of VOLVO CARS CORPORATION

Position the winches as shown in the illustration. Secure the long end of the wire in the right-hand winch. Raise about 20 cm.

Check that the loose end of the wire is not slipping.

Secure the other end of the wire to the left winch.

Wind in the wire using both the winches until the wire is against the locating pins at (1).

Fig. 68: Identifying Wire From The Right-Hand Winch
Courtesy of VOLVO CARS CORPORATION

In order to clear the locating pin, detach the wire from the right-hand winch and insert it on the other side of the locating pin (2).

Remove the wire from the right-hand winch and pull the wire out on the outside.

Press in the needle (special tool see **9512337**) below the locating pin.

Insert the wire through the hole in the needle. Pull out the needle.

Fig. 69: Identifying Right-Hand Winch To Its New Position
Courtesy of VOLVO CARS CORPORATION

Move the right-hand winch to its new position (see the illustration). Wind in the rest of the wire.

Fig. 70: Identifying PUR Bead Cutting
Courtesy of VOLVO CARS CORPORATION

The window is now only secured by a small amount of the PUR bead at the right-hand locating pin.

Use a knife to cut through the final part of the bead.

INSTALLING THE REAR WINDSHIELD IN THE TAILGATE

Always ensure that a side window is open so that the bonded window does not jump out of position when a door is closed.

When working with PUR adhesive on the body flange, see **PUR ON BODY FLANGE** .

Clean the area on the window to which PUR adhesive is to be applied with cleaner-H (black cap).

Apply glass activator (yellow cork) and glass primer (green cork) to the same surface. Use plenty of glass primer, but do not let it run.

Let the primer dry until the surface is matte.

Apply PUR rim activator (blue cork) to the remaining PUR bead on the tailgate if the windshield has been removed for more than eight hours.

Apply adhesive to the tailgate.

NOTE: **The top of the windshield must be position first so that it clears the projecting section of the tailgate.**

Press the window into place by hand.

Check that the window is aligned with the door.

Secure with tape.

REMOVAL

NOTE: Make sure that the vehicle is standing on a level surface.

See information about bonded windows, general safety information, see **BONDED WINDOW, GENERAL SAFETY INFORMATION**

See information about bonded windows, general information. See **BONDED WINDOW GENERAL, INFORMATION**

Remove the following components:

- plenum chamber. See **COWL, REPLACING**
- rain sensor. See **RAIN SENSOR**

WARNING: Wear safety goggles.

WARNING: **Wait for the specified time at the specified temperature before moving the car.**

Install the following items:

- plenum chamber. See **COWL, REPLACING**
- rain sensor. See **RAIN SENSOR**

GLASS FOR SIDE DOORS AND WINDOWS (2003-2011)

SIDE WINDOW REAR, REPLACING

Special tools:

see **9512925**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE REAR SIDE WINDOW

Fig. 96: Identifying Wire Inserter In The Upper Front Corner
Courtesy of VOLVO CARS CORPORATION

Slide in a piece of tape into the PUR bead (1).

Insert a wire inserter in the upper front corner as shown in the illustration.

Cut off approximately four meters of wire from the roll.

Secure the wire and pull the ends approximately 50 cm into the car.

Pull the wire around and downwards so it forms an eyelet around the outside of the windshield.

Check that the wire is at the bottom against the bead of adhesive.

Stretch the wire so it is still in position at the bottom. Pull in the excess from one end of the wire.

Fig. 97: Secure The Long End Of The Wire In The Upper Winch
Courtesy of VOLVO CARS CORPORATION

Secure the long end of the wire in the upper winch. Raise about 20 cm.

Check that the loose end of the wire is not slipping.

Secure the other end of the wire in the lower winch.

Use both winches to wind in the wire as much as possible.

Protect the interior trim using the parabolic chisel when the wire is fed in.

Either move the lower winch forward so that the final section of the wire can be winched in, or angle out the window and cut using the extractor knife.

INSTALLING REAR SIDE WINDOWS

The rear door must always be open.

Always ensure that a side window is open so that the bonded window does not jump out of position when a door is closed.

When working with PUR adhesive on the body flange, see **PUR ON BODY FLANGE** .

Clean the area on the window to which PUR adhesive is to be applied with cleaner-H (black cap).

Apply glass activator (yellow cork) and glass primer (green cork) to the same surface. Use plenty of glass primer, but do not let it run.

Let the primer dry until the surface is matte.

Apply PUR rim activator (blue cork) to the remaining PUR bead on the tailgate if the windshield has been removed for more than eight hours.

Apply adhesive to the body flange on the old PUR bead.

Press the window into place by hand.

Check that the window is aligned with the door.

Secure with tape.

WINDOW FRONT SIDE DOOR, REPLACE

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE WINDOW FROM THE FRONT SIDE DOOR

Fig. 98: Identifying Window Removal
Courtesy of VOLVO CARS CORPORATION

Wind down the window half way.

NOTE: **The mechanism is correctly positioned for removal when the holes in the mechanism and in the arm are opposite each other.**

Remove:

- the panel. See **PANEL FRONT SIDE DOOR, REPLACING**
- the soundproofing
- the weatherstrip at the bottom of the inside of the window
- the metal clip from the slide
- the ball joint from the clip in the window mounting.

Insert a screwdriver. Pry until the clip and ball joint snap free.

Angle out the window.

INSTALLING THE WINDOW IN THE FRONT SIDE DOOR

Lift the window into the door.

Press the window mounting into place against the lift mechanism.

Install:

- the 2 metal clips for the slide
- the weatherstrip at the bottom of the inside of the window
- the soundproofing
- the panel. See **PANEL FRONT SIDE DOOR, REPLACING** .

Clean the window.

WINDOW REAR SIDE DOOR, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

METHOD CONTENT

This method consists of:

- see **WINDOW REAR SIDE DOOR, REPLACING**
- see **FIXED WINDOW REAR SIDE DOOR, REPLACING**.

WINDOW REAR SIDE DOOR, REPLACING

REMOVING THE WINDOW FROM THE REAR SIDE DOOR

Lower the window completely.

Remove:

- the panel. See: **PANEL REAR SIDE DOOR, REPLACING**
- the speaker as described in, see **LOUDSPEAKER, REAR SIDE DOOR, REPLACING**
- the soundproofing

Fig. 99: View Of Fixed Window In The Rear Side Door Screws
Courtesy of VOLVO CARS CORPORATION

- the fixed window in the rear side door
- the 2 screws
- the weatherstrip in the door frame
- the weatherstrip at the bottom edge of the inside of the side window.

Slide/angle the glass unit forward.

Lift out the glass unit.

Fig. 100: View Of Side Window To The Half Open Position
Courtesy of VOLVO CARS CORPORATION

Raise the side window to the half open position.

Remove the 2 x rivets where the window is connected to the lift mechanism.

Lift out the side window.

INSTALLING THE WINDOW IN THE REAR SIDE DOOR

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Install:

- the side window
- the 2 x rivets where the window is connected to the lift mechanism.

Lower the window completely.

HINT: Use a little soap when installing the glass unit.

CAUTION: Guide the fixed window/glass unit towards the side window at installation.

Install the fixed window/glass unit.

Pull the fixed glass backwards towards the door arch.

Install:

- the 1 x M5 screw in the door arch and tighten

- the 1 x M6 screw in the door and tighten
- the weatherstrip in the door frame
- the weatherstrip at the bottom edge of the inside of the side window
- the soundproofing
- the speaker as described in, see **LOUDSPEAKER, REAR SIDE DOOR, REPLACING**
- the panel. See **PANEL REAR SIDE DOOR, REPLACING** .

Clean the window.

FIXED WINDOW REAR SIDE DOOR, REPLACING

REMOVING THE FIXED WINDOW FROM THE REAR SIDE DOOR

Fig. 101: View Of Fixed Window In The Rear Side Door Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the side window. See **REMOVING THE WINDOW FROM THE REAR SIDE DOOR**
- the 2 screws.

Slide the glass unit forward.

Lift out the glass unit.

INSTALLING THE FIXED WINDOW IN THE REAR SIDE DOOR

NOTE: For tightening torques, see: TIGHTENING TORQUE .

HINT: Use a little soap when installing the glass unit.

Install:

- the glass unit
- the 1 x M5 screw in the door arch and tighten
- the 1 x M6 screw in the door and tighten
- the side window as described in, see **INSTALLING THE WINDOW IN THE REAR SIDE DOOR**.

Clean the window.

OUTER TRIM DETAILS, EMBLEMS, REFLECTIVE STRIPS (2003-2004)

BADGES, REAR, REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE BADGE

NOTE: Do not damage the car paintwork.

Remove:

- the badge
- any tape residue.

Use a hot-air gun to carefully heat up the badge.

Carefully lift up one edge of the badge.

INSTALLING THE BADGE

Fig. 102: Identifying Badge (1 of 2)
Courtesy of VOLVO CARS CORPORATION

Use the following dimensions for the Volvo badge:

M1 = 538±1.5 mm (21.18")

M2 = 26±1 mm (1.02")

Fig. 103: Identifying Badge (2 of 2)
Courtesy of VOLVO CARS CORPORATION

Use the following dimensions for the model designation:

M3 = 27±1 mm (1.06")

M4 = 33±1 mm (1.30")

M5 = 90±1 mm (3.54")

M6 = 41±1 mm (1.61")

Ensure that the car is at least at room temperature (<20°C).

Wash the area for the badge. Use a 50/50 mixture of isopropanol and water.

Wipe clean and dry using a lint-free cloth.

NOTE: **In order for the badge to secure, the surface must be clean and free of dust and grease.**

Remove the protective film from the tape.

NOTE: Leave the foil in place.

Guide the badge into the position indicated in the dimensions. Press the whole badge to ensure the tape is in good contact with the base.

Check that the edges of the badge are against the base.

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

DOOR MOLDING LOWER FRONT SIDE DOOR, REPLACING

Special tools:

see **9512942**

see **9512949**

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE LOWER TRIM FROM THE FRONT SIDE DOOR

Fig. 104: Identifying Front Side Door Lower Trim
Courtesy of VOLVO CARS CORPORATION

Remove:

- the molding at the lower edge
- two clips.

Remove:

- the trim.

Fig. 105: Removing Tape Residue
Courtesy of VOLVO CARS CORPORATION

- any tape residue. Use: see **9512942** and: see **9512949** .

INSTALLING THE LOWER TRIM FOR THE FRONT SIDE DOOR

NOTE: The car must be at least room temperature, above 20 °C.

Wash the area for the molding. Use a 50/50 mixture of isopropanol and water.

Wipe dry using a clean lint-free cloth.

Remove the backing from the tape.

NOTE: Use new clips.

Locate the locating pins and clips for the molding in the holes.

Press down along the entire length of the molding to ensure the tape is in contact with the door.

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

DOOR MOLDING LOWER REAR SIDE DOOR, REPLACING

Special tools:

see **9512942**

see **9512949**

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE LOWER TRIM FROM THE REAR SIDE DOOR

Fig. 106: Identifying Rear Side Door Lower Trim
Courtesy of VOLVO CARS CORPORATION

Remove:

- the molding at the lower edge
- two clips.

Remove:

- the trim.

Fig. 107: Removing Tape Residue
Courtesy of VOLVO CARS CORPORATION

- any tape residue. Use: see **9512942** and: see **9512949** .

INSTALLING THE LOWER TRIM ON THE REAR SIDE DOOR

NOTE: The car must be at least room temperature, above 20 °C.

Wash the area for the molding. Use a 50/50 mixture of isopropanol and water.

Wipe dry using a clean lint-free cloth.

Remove the backing from the tape.

NOTE: Use new clips.

Locate the locating pins and clips for the molding in the holes.

Press down along the entire length of the molding to ensure the tape is in contact with the door.

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

DOOR SILL FRONT, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE FRONT DOOR SILL

Fig. 108: View Of Front Fender Extension
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front fender extension. See **FENDER EXTENSION, REPLACING**
- the 4 rivets. See **REMOVING RIVET**
- 1 clip at the bottom edge of the door sill.

Release the hidden clip.

Fig. 109: Pull The Front Door Sill Forwards And Outwards
Courtesy of VOLVO CARS CORPORATION

Pull the front door sill forwards and outwards.

Note the 1 hidden clip and the guides (1) for the rear door sill.

INSTALLING THE FRONT DOOR SILL

Fig. 110: View Of Rear Door Sill Guides
Courtesy of VOLVO CARS CORPORATION

Install the front door sill and press the hidden clip into place.

NOTE: Check that the guides (1) for the rear door sill are correctly positioned.

Fig. 111: View Of Blind Rivets And Bottom Clip
Courtesy of VOLVO CARS CORPORATION

Install:

- the 1 clip at the bottom edge
- the 4 blind rivets
- the front fender extension. See **FENDER EXTENSION, REPLACING** .

DOOR SILL REAR, REPLACING

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATIONS

Remove:

- the rear wheel
- the rear fender extension. See **FENDER EXTENSION, REPLACING** .

REMOVING THE REAR DOOR SILL

Fig. 112: View Of Rubber Strip
Courtesy of VOLVO CARS CORPORATION

Remove:

- the rubber strip.

Fig. 113: Locating Rear Door Sill Clips
Courtesy of VOLVO CARS CORPORATION

- the 1 rivet. See **REMOVING RIVET**
- the 8 clips at the bottom edge of the door sill.

HINT: Drill out the center pin using a 4.5 mm drill bit.

Fig. 114: View Of Door Sill Clips
Courtesy of VOLVO CARS CORPORATION

Remove the 10 clips at the top edge of the door sill.

HINT: Remove the clips working from the back and forwards.

HINT: Insert a large flat bladed screwdriver in the clip to release it.

Pull the door sill backwards to release it.

INSTALLING THE REAR DOOR SILL

NOTE: Use new clips if the old ones are damaged.

Fig. 115: Installing Rear Door Sill Clips
Courtesy of VOLVO CARS CORPORATION

Install:

- the 10 clips at the bottom edge of the door sill
- the rubber strip.

NOTE: **Ensure that the guides (1) are correctly positioned against the front door sill.**

Fig. 116: View Of Door Sill Blind Rivets
Courtesy of VOLVO CARS CORPORATION

Install:

- the 8 clips at the bottom edge of the door sill
- 1 blind rivet
- the rear fender extension. See **FENDER EXTENSION, REPLACING**
- the rear wheel.

TRIM MOLDING, REPLACING

Special tools:

see **9512942**

see **9512949**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVING THE FRONT TRIM MOLDING

Fig. 117: Identifying Removal Of Front Trim Molding
Courtesy of VOLVO CARS CORPORATION

Remove:

- the side turn signal flasher. See **SIDE TURN SIGNAL FLASHER, REPLACING**
- the trim molding
- any tape residue. Use: see **9512942** and: see **9512949** .

REMOVING THE REAR TRIM MOLDING

Fig. 118: Identifying Removal Of Rear Trim Molding
Courtesy of VOLVO CARS CORPORATION

Remove:

- the trim molding.

Fig. 119: Removing Tape Residue
Courtesy of VOLVO CARS CORPORATION

- any tape residue. Use: see **9512942** and: see **9512949** .

INSTALLING THE FRONT AND REAR TRIM MOLDINGS

NOTE: The car must be at least room temperature, above 20 °C.

Wash the area for the molding. Use a 50/50 mixture of isopropanol and water.

Wipe dry using a clean lint-free cloth.

Remove the backing from the tape.

Locate the locating pins for the molding in the holes.

Press down along the entire length of the molding to ensure the tape is in contact with the door.

Applies to the front molding: Install the side turn signal flasher. See **SIDE TURN SIGNAL FLASHER, REPLACING** .

NOTE: To ensure optimal adhesion, do not wash the car for 72 hours.

TRIM STRIP DOOR ARCH REAR SIDE DOOR, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

REMOVING DOOR PANELS

Fig. 120: Identifying Door Arch Weatherstrip
Courtesy of VOLVO CARS CORPORATION

Open the window.

Pull out the weatherstrip from the door arch. Allow the weatherstrip to hang loosely on the inside of the door.

Remove:

- the door panel. See: **PANEL REAR SIDE DOOR, REPLACING**
- the 2 x screws holding the side glass, as shown in the illustration.

REMOVAL

REMOVING THE TRIM STRIP DOOR ARCH

Fig. 121: Detach Trip Strip With Weather Strip
Courtesy of VOLVO CARS CORPORATION

NOTE: The quarter window may be hard to remove.

Press the fixed side glass down approximately 10 mm.

Fold up the rear end of the trim strip.

Detach the trim strip from the tape on the door arch. Use a weatherstrip tool.

Fig. 122: Detach The Trim Strip From The Tape On The Door Arch
Courtesy of VOLVO CARS CORPORATION

Fold up the front end of the trim strip.

Detach the trim strip from the tape on the door arch. Use a weatherstrip tool.

Fig. 123: Tape The Trim Strip Off The Door Arch
Courtesy of VOLVO CARS CORPORATION

CAUTION: Use a plastic wedge or similar as a shim to prevent damaging the paintwork.

Tape the trim strip off the door arch (1).

Pull out the trim strip (2).

INSTALLATION

INSTALLING THE TRIM STRIP DOOR ARCH

Fig. 124: View Of Protective Foil Protecting The Tape
Courtesy of VOLVO CARS CORPORATION

Clean any remaining tape from the door arch.

Fold up a piece of the protective foil protecting the tape at both ends of the trim strip.

Fig. 125: View Of Trim Strip Over Fixed Quarter Window
Courtesy of VOLVO CARS CORPORATION

Slide the trim strip in over the fixed quarter window.

Fig. 126: Press Trim Strip Into Place On The Door Arch
Courtesy of VOLVO CARS CORPORATION

Press the trim strip into place on the door arch (1).

Align the ends of the trim strip on the upper edge of the door arch.

Fig. 127: Folding In Ends Of The Trim Strip
Courtesy of VOLVO CARS CORPORATION

Pull off the protective foil at both ends of the trim strip.

Align the strip opposite the trim panel. Press securely.

Finish by folding in the ends of the trim strip.

Fig. 128: View Of Fixed Quarter Window Up Against The Trim Strip
Courtesy of VOLVO CARS CORPORATION

Slide the fixed quarter window up against the trim strip.

Fig. 129: Identifying Door Arch Weatherstrip
Courtesy of VOLVO CARS CORPORATION

Install the 2 screws for the fixed quarter window. See the illustration. Tighten.

FINISHING

INSTALLING THE DOOR PANEL

Install:

- the door panel. See: **PANEL REAR SIDE DOOR, REPLACING**
- the weatherstrip in the door arch.

Close the window.

TRIM STRIP DOOR ARCH SIDE DOOR, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

REMOVING THE DOOR MIRROR

Fig. 130: View Of Removing Door Mirror
Courtesy of VOLVO CARS CORPORATION

Open the window.

Remove the door mirror. First remove the cover on the inside of the door and slacken off the nut. Allow the door mirror (1) to hang loose outside the door.

HINT: Apply tape between the door mirror and the door (2) to prevent scratches.

Pull out the weatherstrip (3) from the door arch. Allow the weatherstrip to hang loosely on the inside of the door.

REMOVAL

REMOVING THE TRIM STRIP DOOR ARCH

Fig. 131: View Of Trim Strip Removal With Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

Remove the trim strip. Use a weatherstrip tool.

To release the tape from the door arch, start from the bottom and carefully pry upwards. (The end of the tape is in the joint between the rear view mirror and the side window.)

Fig. 132: Identifying Upper Rear Edge Of The Door Trim Strip
Courtesy of VOLVO CARS CORPORATION

Fold up the end of the trim strip in the upper rear edge of the door.

Fig. 133: View Of Removal Of Trim Strip From The Door Arch
Courtesy of VOLVO CARS CORPORATION

CAUTION: Use a plastic wedge or similar as a shim to prevent damaging the paintwork.

Remove the trim strip from the door arch.

Fig. 134: Detach The Trim Strip From The Tape On The Rear Edge Of The Door Arch
Courtesy of VOLVO CARS CORPORATION

Detach the trim strip from the tape on the rear edge of the door arch. Use a weatherstrip tool.

INSTALLATION

INSTALLING THE TRIM STRIP DOOR ARCH

Fig. 135: Identifying Trim Strip Protective Tape
Courtesy of VOLVO CARS CORPORATION

Clean any remaining tape from the door arch.

Fold up a piece of the protective foil protecting the tape at both ends of the trim strip.

Fig. 136: Align The Strip Against The Door Arch
Courtesy of VOLVO CARS CORPORATION

Align the strip against the door arch.

NOTE: **The trim strip must be positioned on the inside of the weatherstrip.**

Fig. 137: Press The Trim Strip Into Place On The Door Arch
Courtesy of VOLVO CARS CORPORATION

Press the trim strip into place on the door arch.

Fig. 138: Pull Off The Protective Foil At Both Ends
Courtesy of VOLVO CARS CORPORATION

Pull off the protective foil at both ends (1) of the trim strip.

Align the strip opposite the trim panel. Press securely.

Finish by folding the end of the trim strip around the door arch.

FINISHING

INSTALLING THE DOOR MIRROR

Install the door mirror.

Remove the tape from the door.

Reinstall the weatherstrip in the door frame.

Close the window.

TRIM STRIP REAR SIDE WINDOW, REPLACING

Special tools:

see **9814071**

see **9512841**

NOTE: **As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE TRIM STRIP REAR SIDE WINDOW

Fig. 139: View Of Upper Molding 10 Clips
Courtesy of VOLVO CARS CORPORATION

The upper molding is secured by 10 clips.

In addition the molding is bonded at (1) and taped at (2). See the illustration.

Fig. 140: Cut Off Adhesive With Bent Putty Knife
Courtesy of VOLVO CARS CORPORATION

Protect the body side using masking tape, P/N 951 1069.

Hold the molding straight.

Cut off the adhesive. Insert a bent putty knife down by each clip and break the adhesive outwards. Move the masking tape.

Fig. 141: View Of Lower Corner Tape
Courtesy of VOLVO CARS CORPORATION

Cut off the tape in the lower corner.

Fig. 142: Break Off Tape From Underneath
Courtesy of VOLVO CARS CORPORATION

Insert the weatherstrip tool see **9814071** in the end of the molding.

Use the putty knife and break off from underneath.

Remove the first 2 clips

Fig. 143: Pull The Weatherstrip Off Forwards
Courtesy of VOLVO CARS CORPORATION

Pull the weatherstrip off forwards.

INSTALLATION

INSTALLING THE TRIM STRIP REAR SIDE WINDOW

Fig. 144: View Of Upper Molding 10 Clips
Courtesy of VOLVO CARS CORPORATION

Check that the clips are intact.

Clean the molding area. Use "Cleaner H" or cleaning alcohol.

Apply adhesive P/N 116 1767 at (1) and (2).

Press the weatherstrip into place.

If necessary, apply double-sided adhesive tape or position a suction clamp see **9512841** at (2) to hold the molding while the adhesive cures.

Fig. 145: Identifying Four Lower Clips At The Fixed Quarter Window
Courtesy of VOLVO CARS CORPORATION

NOTE: Replacing the four lower clips at the fixed quarter window.

Install the 4 x new clips at each position.

Fig. 146: View Of Rubber Molding Clip
Courtesy of VOLVO CARS CORPORATION

Install a piece of tape to protect the paint.

Use bent long-nosed pliers and clamp the clip securely to the rubber molding, see illustration.

Install the molding as shown in the illustration above.

OUTER TRIM DETAILS, EMBLEMS, REFLECTIVE STRIPS (B5254T2; B6294T; 2005)

BADGE REAR, REPLACING

see **BADGE REAR, REPLACING**

OUTER TRIM DETAILS, EMBLEMS, REFLECTIVE STRIPS (B5254T2; B6294T; 2006)

BADGE REAR, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVAL

REMOVING THE BADGE

Heat the badge carefully. Use a hot-air gun.

Carefully lift up one edge of the badge.

CAUTION: Do not damage the vehicle paintwork.

Remove:

- the badge
- any tape residue.

INSTALLATION

INSTALLING THE BADGE

Ensure that the vehicle is at least at room temperature (above 20 °C).

Wash the area for the badge. Use a mixture of 50% isopropanol and 50% water.

Wipe dry using a clean lint-free cloth or similar.

CAUTION: In order for the badge to secure, the surface must be clean and free of dust and grease.

Remove the backing from the tape.

NOTE: Leave the foil in place.

Guide the badge into the position indicated in the dimensions. Press the whole badge to ensure the tape is in

good contact with the base.

Use the following measurements:

Fig. 147: Identifying Volvo Badge
Courtesy of VOLVO CARS CORPORATION

Volvo badge

M1 = 538 ± 1.5 mm

M2 = 26 ± 1 mm

Fig. 148: Identifying Model designation Badge
Courtesy of VOLVO CARS CORPORATION

Model designation

M3 = 57.5 ± 1 mm

M4 = 32.5 ± 1 mm

Fig. 149: Identifying Engine Designation Badge
Courtesy of VOLVO CARS CORPORATION

Engine designation

M5 = 27±1 mm

M6 = 33±2 mm

M7 = 78.5±1 mm

M8 = 41±2 mm

Check that the edges of the badge are against the base. There must be no gaps.

Remove the securing foil.

NOTE: **To ensure optimal adhesion, do not wash the car for 72 hours. It gradually increases.**

Cleaning agent	9192678-2

REMOVE

NOTE: Removal steps in this procedure may contain installation details.

Fig. 150: View Of Rear Lamp Cluster Trim Strip
Courtesy of VOLVO CARS CORPORATION

CAUTION: Do not damage the vehicle paintwork.

CAUTION: Make sure that the mating faces are at a minimum temperature of +20°C.

CAUTION: Make sure that the mating faces are clean and free of foreign material.

Use: Cleaning agent, 9192678-2

CAUTION: Make sure that the mating surfaces are dry.

CAUTION: Apply even pressure along the entire component.

Fig. 151: Make Sure That The Tape Has Not Detached From The Edges Of The Component
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the tape has not detached from the edges of the component.

CAUTION: Make sure that the customer is advised not to wash the vehicle within the next 72 hours.

SEALS AND WEATHER-STRIP FOR DOORS, TAILGATE (2003-2011)

SILL TRIM PANEL, REPLACING

NOTE: As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

SILL TRIM PANEL FRONT SIDE DOOR

REMOVING THE SILL TRIM PANEL FROM THE FRONT SIDE DOOR

Fig. 152: Identifying Sill Trim Panel Removal
Courtesy of VOLVO CARS CORPORATION

Pull the sill trim panel straight up.

Pull out the sill trim panel at the front and rear edges.

INSTALLING THE SILL TRIM PANEL FOR THE FRONT SIDE DOOR

Insert the sill trim panel at the rear edge.

Press the sill trim panel into place at the front edge.

Press the sill trim panel straight down.

SILL TRIM PANEL REAR SIDE DOOR

REMOVING THE SILL TRIM PANEL FROM THE REAR SIDE DOOR

Fig. 153: Identifying Sill Trim Panel Removal
Courtesy of VOLVO CARS CORPORATION

Remove the end mounting. See **END MOUNTINGS REAR (SECOND ROW), REPLACING** .

Pull up the sill trim panel at the rear edge.

Angle the sill trim panel out from the B post panel.

INSTALLING THE SILL TRIM PANEL FOR THE REAR SIDE DOOR

Insert the front edge of the sill trim panel into the B post panel.

Press the sill trim panel into place.

Install the end mounting. See **END MOUNTINGS REAR (SECOND ROW), REPLACING** .

COVER

REMOVING THE COVER FROM THE LOWER EDGE OF THE B POST

Fig. 154: Identifying Removal Of Cover From Lower Edge Of B Post
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front sill trim panel. See **REMOVING THE SILL TRIM PANEL FROM THE FRONT SIDE DOOR**
- the rear sill trim panel. See **REMOVING THE SILL TRIM PANEL FROM THE REAR SIDE DOOR**
- the cover.

INSTALLING THE COVER AT THE LOWER EDGE OF THE B POST

Fig. 155: Identifying Cover Installed To Lower Edge Of B Post
Courtesy of VOLVO CARS CORPORATION

Install:

- the cover at the bottom edge of the B post
- the front sill trim panel. See **INSTALLING THE SILL TRIM PANEL FOR THE FRONT SIDE DOOR**
- the rear sill trim panel. See **INSTALLING THE SILL TRIM PANEL FOR THE REAR SIDE DOOR**.

ELECTRICAL

Volvo - XC90 - 2008

IDENTIFICATION

WARNING: Vehicles are equipped with air bag supplemental restraint system. Before attempting ANY repairs involving steering column, instrument panel or related components, see AIR BAG SAFETY PRECAUTIONS and DISABLING & ACTIVATING AIR BAG SYSTEM in appropriate AIR BAG RESTRAINT SYSTEMS article.

CAUTION: When battery is disconnected, vehicle computer and memory systems may lose memory data. Driveability problems may exist until computer systems have completed a relearn cycle.

ENGINE COMPARTMENT

Fig. 1: Identifying Engine Compartment Fuse Block (11A)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Engine Compartment Fuse Assignments (11A)

Fuse No.	Module No.	Fuse Function	Amperage
1	4/109	Glow plug control module (GCU)	60
	20/22-26	Glow plug	--
2	6/29	Motor, cooling fan	60
3	-	-	--
4	-	-	--
5	-	-	--

Fig. 2: Identifying Engine Compartment Fuse Block (11B)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Engine Compartment Fuse Assignments (11B)

Fuse No.	Module No.	Fuse Function	Amperage
1	4/16	Brake Control Module (BCM)	30
2	4/16	Brake Control Module (BCM)	30
3	6/104	High pressure headlight washer	35
4	6/35	Fuel pump, auxiliary heater	25
	6/73	Coolant pump, auxiliary heater	--
	9/30	Auxiliary heater	--
5	54/8	Connector cable harness extra lights, 30-feed	20
6	6/25	starter motor	35
7	2/90	Relay, windshield wiper, low/high speed	25
	2/91	Relay, intermittent wiping	--
	6/1	Windshield wiper motor	--
8	4/83	Fuel pump control module	15
	6/33	Fuel pump	--
9	4/28	Transmission Control Module (TCM) (TF-80SC/TF-80SC AWD)	15
10	4/46	Engine Control Module (ECM) (Diesel)	20
	20/3-8	Spark plug and ignition coil (not 8-cyl.)	--
	20/14	Condenser, ignition coils (8-cyl.)	--
	20/46-53	Spark plug with ignition coil (8-cyl.)	--
11	6/44	Cooling fan, electrics box, engine compartment	10
	7/51	Accelerator pedal sensor	--
	8/3	Electromagnetic clutch, climate control system	--
12	7/17	Mass airflow sensor (MAF) (Diesel)	5
	4/46	Engine Control Module (ECM) (Gas, not 8-cyl.)	15
	7/17	Mass airflow sensor (MAF) (Gas, not 8-cyl.)	--
	8/6-11	Injectors (Gas, not 8-cyl.)	--
	8/146-153	Injection valves (8-cyl.)	--

13	4/46	Engine Control Module (ECM) (5-cyl. normally aspirated/8-cyl.)	10
	4/50	Electronic Throttle Module (ETM) (Bi-Fuel)	--
	6/120	Throttle body motor (5-cyl. normally aspirated/8-cyl.)	--
	6/139	Upper actuating motor, intake manifold	--
	6/140	Lower actuating motor, intake manifold	--
	8/98	Control valve, fuel pressure (Diesel)	--
	8/111	High-pressure solenoid valve (Diesel)	--
14	7//15	Heated oxygen sensor (Diesel)	10
	4/46	Engine Control Module (ECM) (Bi-Fuel)	20
	7//15	Heated oxygen sensor, front	--
	7/82	Heated oxygen sensor, diagnosis 1	--
	7/103	Heated oxygen sensor 3	--
	7/15	Front heated oxygen sensor, bank 2 (8-cyl.)	--
	7/82	Front heated oxygen sensor, bank 1 (8-cyl.)	--
	7/103	Rear heated oxygen sensor, bank 2 (8-cyl.)	--
	7/104	Rear heated oxygen sensor, bank 1 (8-cyl.)	--
15	6/67	Pump, fuel leakage control	10
	6/105	Fuel distributor gas (Bi-Fuel)	--
	8/18	EVAP valve	--
	8/19	Solenoid, variable valve timing intake	--
	8/28	Turbo control valve	--
	8/75	Valve, fuel cut-off DFCO	--
	8/81	Solenoid, variable valve timing exhaust	--
	9/32	PTC resistor - air preheating	--
	8/125	Variable valve lifter, front plane (6-cyl.)	15
	8/126	Variable valve lifter, rear plane (6-cyl.)	--
	4/46	Engine Control Module (ECM) (8-cyl.)	--
	6/67	Pump, fuel leakage control (8-cyl.)	--
	7/17	Mass air flow sensor (MAF) (8-cyl.)	--
	8/3	Electromagnetic clutch, climate control system (8-cyl.)	--
	8/18	EVAP valve (8-cyl.)	--
	8/19	Solenoid, variable valve timing, intake, bank 2 (8-cyl.)	--
	8/81	Solenoid, variable valve timing, exhaust, bank 2 (8-cyl.)	--
	8/107	Valve, variable intake (8-cyl.)	--
	8/117	Solenoid, variable valve timing, intake, bank 1 (8-cyl.)	--
	8/118	Solenoid, variable valve timing, exhaust, bank 1 (8-	--

		cyl.)	
	4/109	Glow plug control module (GCU)	--
	6/143	Regulator motor, turbo (Diesel)	--
	8/64	Solenoid valve, engine pad (Diesel)	--
	8/113	Bypass valve, EGR cooling (Diesel)	--
	8/120	EGR valve (Diesel)	--
16	10/1	Left front lamp housing, daytime running lights	20
	10/70	Left-hand low beam	--
17	10/2	Right front lamp housing, daytime running lights	20
	10/66	Right-hand low beam	--
19	2/32	Main relay, engine management system	5
	4/46	Engine Control Module (ECM)	--
20	10/11	Front left running/parking light	15
	10/12	Front right running/parking light	--
	10/71	Side running light, front left	--
	10/73	Side running light, front right	--

Fig. 3: Identifying Engine Compartment Relay Block
Courtesy of VOLVO CARS OF NORTH AMERICA.

Engine Compartment Relay Block Assignments

Relay No.	Module No.	Relay Function
FMA1	2/35	Starter motor
FMA3	2/32	Engine management system Main relay
FMI2	2/22	Climate control system
FST1	2/90	Windshield wiper, low/high speed
FST2	2/91	Intermittent wiping
FST3	2/182	High pressure headlight washer motor

Accessory Relay Assignments

Position	Module No.	Relay Function
Engine Compartment	2/64	Auxiliary Light (Accessory)

Front Member	2/192	Electric Engine Heater

PASSENGER COMPARTMENT

Fig. 4: Identifying Passenger Compartment Fuse Box (11C)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Passenger Compartment Fuse Assignments (11C)

Fuse No.	Module No.	Fuse Function	Amperage
1	6/28	Motor, passenger compartment fan	30
2	16/105	Audio Module (AUD)	30
3	4/52	Power Seat Module (PSM)	25
	6/16	Driver seat motor, backrest angle	--
	6/17	Driver seat motor, up/down front edge	--
	6/18	Driver seat motor, up/down rear edge	--
	6/19	Driver seat motor, forward/backward	--
4	6/20	Passenger seat motor, forward/backward	25
	6/64	Passenger seat motor, backrest angle	--
	6/65	Passenger seat motor, up/down front edge	--
	6/66	Passenger seat motor, up/down rear edge	--
5	3/74	Left front door lock unit	25
	3/126	Driver/Passenger Door Module (DDM)/(PDM)	--
	6/58	Front left power window motor	--

	6/62	Left power exterior rearview mirror	--
	9/33	Left heated exterior rearview mirror	--
	10/148	Left exterior rearview mirror lighting	--
6	3/75	Lock unit, right front door	25
	3/127	Passenger/Driver Door Module (PDM)/(DDM)	--
	6/60	Front right power window motor	--
	6/63	Right power exterior rearview mirror	--
	9/34	Right heated exterior rearview mirror	--
	10/149	Right exterior rearview mirror lighting	--
8	16/1	Integrated Audio Module (IAM)	15
	16/109	DVD player/control module	--
9	4/124	Accessory USB unit (AUU)	10
	16/46	Multimedia display	--
	16/108	Multimedia Module (MMM)	--
	16/109	DVD player/control module	--
	16/139	Global Positioning System Module (GPS)	--
	16/145	Remote Digital Audio Receiver (RDAR)	--
	54/112	Connector, Infotainment cable harness, 30-feed	--
10	3/111	Light Switch Module (LSM)	5
	3/254	Steering Wheel Module (SWM)	--
	4/68	Steering Wheel Angle Sensor Module (SAS)	--
	17/13	Data link connector	--
11	3/157	Switch airbag passenger side	7.5
	4/9	Supplemental Restraint System module (SRS)	--
	4/28	Transmission Control Module (TCM)	--
	4/46	Engine Control Module (ECM)	--
	4/56	Central Electronic Module (CEM)	--
	4/58	Rear Electronic Module (REM)	--
	11O/1	Fuse 1 in spare fuse holder 11O, passenger compartment	--
	11O/2	Fuse 2 in spare fuse holder 11O, passenger compartment	--
	16/65	Antenna ring/ignition switch lighting	--
12	3/117	Ceiling light switch unit	10
	4/33	Sun Roof Module (SRM)	--
	4/70	Upper Electronic Module (UEM)	--
	4/76	Remote controlled garage door opener	--
	7/149	Rain Sensor Module (RSM)	--
	10/114	Left-hand vanity mirror lighting	--
	10/115	Right-hand vanity mirror lighting	--
	10/150	Rear reading light	--
	10/172	Reading light, third row of seats	--
13	4/70	Upper Electronic Module (UEM)	15

	6/15	Sunroof motor	--
14	16/60	Phone Module (PHM)	5

Fig. 5: Identifying Passenger Compartment Extra Fuse Holder (11O/1-2)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Passenger Compartment Extra Fuse Holder (11O/1-2) Assignments

Fuse No.	Function	Amperage
1	Alcolock	5
	Alcolock	--
2	Alcolock	5

Fig. 6: Identifying Passenger Compartment Fuse Box (Central Electronic Module - CEM)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Passenger Compartment Fuse (Central Electronic Module - CEM) Assignments

Fuse No.	Module No.	Fuse Function	Amperage
F1	9/13	Seat Heating Module (SHM), right-hand	15
F2	9/12	Seat Heating Module (SHM), left-hand	15
F3	16/10	Horn	15
F5	16/46	Multimedia display	10
	16/94	Infotainment Control Module (ICM)	--
	16/105	Audio Module (AUD)	--
	16/108	Multimedia Module (MMM)	--
	16/109	DVD player/control module	--
	54/112	Connector, Infotainment cable harness, extended D-feed	--
F8	16/35	Siren Control Module (SCM)	5
F9	3/9	Contact brake light	5
F10	3/112	Climate Control Module (CCM)	10
	4/7	Combustion Preheater Module (CPM)	--
	4/52	Power Seat Module (PSM)	--
	5/1	Driver Information Module (DIM)	--
	6/48	Damper Motor Module (DMM), recirculation	--
	6/69	Damper Motor Module (DMM), ventilation/floor/defroster	--
	6/95	Damper Motor Module (DMM), temperature, left-hand side	--
	6/96	Damper Motor Module (DMM), temperature, right-hand side	--
	6/102	Damper Motor Module (DMM), defroster	--
	6/103	Damper Motor Module (DMM), floor/ventilation	--
	7/93	Occupant Weight Sensor (OWS)	--
	7/159	Air Quality Sensor (AQS)	--
F11	9/1	Outlet 12V front	15
	9/25	Outlet 12V rear	--
F15	4/16	Brake Control Module (BCM)	5
F16	4/99	Electronic power steering control module	10
	4/118	Headlight Control Module (HCM)	--
	6/38	Motor, left headlight adjustment	--
	6/39	Motor, right headlight adjustment	--
	10/1	Left front lamp housing, Bi-Xenon	--
	10/2	Right front lamp housing, Bi-Xenon	--
F17	10/5	Fog light, front left	7.5

F18	10/6	Fog light, front right	7.5
F20	6/113	Coolant pump (8-cyl.)	5
F21	3/156	Gear Selector Module (GSM)	10
	4/28	Transmission Control Module (TCM)	--
	8/36	Solenoid shift lock	--
	8/134	Solenoid, reverse interlock, manual	--
F22	10/68	High beam, left	10
F23	10/64	High beam, right	10
F28	3/27	Switch unit, power passenger seat	5
	16/109	DVD player/control module	--
F29	6/31	Feed pump, ejectors	7.5
	8/88	Solenoid, fuel tank, rear (Bi-Fuel)	--
	8/89	Solenoid, fuel tank, front left (Bi-Fuel)	--
	8/90	Solenoid, fuel tank, front right (Bi-Fuel)	--
F30	27/3	Left Camera Module (LCM)	5
	27/4	Right Camera Module (RCM)	--
F33	6/114	Vacuum pump	20
F34	6/127	Washer motor	15

Accessory Relay Assignments

Position	Module No.	Relay Function
By the climate control system	2/71	Cellular Phone, handsfree
	2/240	Alcolock relay, wake-up
	2/241	Alcolock relay, interior lighting
Left-hand rear door	2/138	Deadlock relay, left-hand rear door
Right-hand rear door	2/139	Deadlock relay, right-hand rear door

TRUNK

Fig. 7: Identifying Cargo Compartment Fuse Box (Rear Electronic Module - REM)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Cargo Compartment Fuse (Rear Electronic Module - REM) Assignments

Fuse No.	Module No.	Fuse Function	Amperage
F1	10/48	Reversing light, right	10
	10/55	Reversing light, left	--
	54/98	Connector, cable harness, rear seat entertainment, reverse gear signal	--
F2	10/3	License plate lighting	20
	10/19	Brake light extra	--
	10/44	Tail light 1, right	--
	10/46	Fog light, rear right	--
	10/51	Tail light 1, left	--
	10/53	Fog light, rear left	--
	10/173	Cargo compartment lighting, tailgate	--
F3	4/78	Accessory Electronic Module (AEM)	15
	4/106	Control module, remote parking heater start	--
F5	4/58	Rear Electronic Module (REM)	10
F6	16/82	DVD player roof mounted	7.5
	54/98	Connector, rear seat entertainment cable harness, 30-feed	--
F7	17/39	13-pin outlet, tow hitch cable harness	15
F8	17/19	12V outlet, cargo compartment	15
F9	2/139	Deadlock relay, right-hand rear door	20
	3/86	Power window switch, right rear door	--
	6/93	Motor, rear right power window	--
F10	2/138	Deadlock relay, left-hand rear door	20
	3/85	Power window switch, left rear door	--

	6/92	Motor, rear left power window	--
F13	8/85	Thermostatic switch and fuel filter heating	15
F14	6/76	Climate control system, rear	15
	16/79	Subwoofer Module (SUB)	--
F19	6/32	Rear window wiper motor	15
F20	17/38	7-pin outlet, tow hitch cable harness	20
	17/39	13-pin outlet, tow hitch cable harness	--
F21	-	Spare	10
F23	4/82	Differential Electronic Module (DEM)	7.5
F26	4/86	Parking Assistance Module (PAM)	5
F27	-	Main fuse for F20, F21, F23, F24, F26	30
F28	3/76	Lock unit, left rear door	15
	3/77	Lock unit, right rear door	--
	3/78	Lock unit, tailgate	--
	6/37	Lock motor, fuel filler flap	--
F29	4/110	Trailer Module • Running light • Left-hand direction indicator	25
	26/4	Converter, direction indicators & brake lights, USA • Running light • Left-hand direction indicator	--
F30	4/110	Trailer Module • Brake lights • Fog lights • Right-hand direction indicator	25
F31	-	Main fuse for F37-F38	40
F37	9/2	Heated rear window	20
F38	9/2	Heated rear window	20

Fig. 8: Identifying Cargo Compartment Fuse Box (11E)
Courtesy of VOLVO CARS OF NORTH AMERICA.

Cargo Compartment Fuse Assignments (11E)

Fuse No.	Module No.	Fuse Function	Amperage
1	4/58	Rear Electronic Module (REM)	60
	-	Main fuse for: F1-F38 in REM	--
2	11M/1	Fuse 1 in spare fuse holder 11M in cargo compartment	40
4	4/56	Central Electronic Module (CEM)	50
	-	Main fuse for: F1-F2, F11, F13-F16, F26-F30, F33 in CEM	--
5	4/56	Central Electronic Module (CEM)	50
	-	Main fuse for: F3, F5-F10, F17-F23, F31-F32, F34 in CEM	--
6	11C/1, 3-6	Fuses 1 & 3-6 in passenger compartment fuse box 11C	50
7	11C/2, 9-14	Fuses 2 & 9-14 in passenger compartment fuse box 11C	50

Fig. 9: Identifying Cargo Compartment Fuse Box (11L)

Identifying Cargo Compartment Fuse Assignments (Spare Fuse Holder 11M)

Fuse No.	Module No.	Function	Amperage
1	16/82	DVD player / control module, 30-feed	10
	16/122	Rear Audio Separation module (RAS), 30-feed	--
2	16/82	DVD player / control module, X-feed	5

Accessory Relay Assignments

Position	Module No.	Relay Function
Cargo Compartment	2/191	Remote parking heater start, radio signal

ACCESSORIES AND EQUIPMENT

General - Cleaning, Inspection And Adjustment

NOISE

NOISE, LOCALIZING

Special tools	
	T9814108 CHASSIS EAR **Tool number:** T9814108 **Tool description:** CHASSIS EAR **Tool boards:**

see **9814108**

Read the manual that is supplied with the instrument.

Position the microphone at the location where the noise is suspected to orginate. Attach the transmitters securely.

Drive the vehicle, listen to one duct at a time. Note where the noise is most clear.

Move one or more of the microphones to successively encircle the noise.

LEAK DETECTION

PASSENGER COMPARTMENT LEAK DETECTION

Special tools	
	981 4107 Leak detector **Tool number:** 981 4107 **Tool description:** Leak detector **Tool boards:** 08

LEAK DETECTION

Fig. 1: Identifying Leak Detector 981 4107
Courtesy of VOLVO CARS CORPORATION

see **9814107**

NOTE: Always follow the manufacturer's instructions when handling the equipment.

SURFACE TREATMENT MATERIAL

PAINT, POLISHING

Materials	
Designation	**Part Number**
Polishing agent	US, Asia: 3M 05927
Polishing agent	EU: 3M 80349
Polishing agent	Japan: 3M 05939
Polishing top	US, Asia: 3M 05703

Polishing top	EU: 3M 50390
Polishing top	Japan: 3M 05755
Drying cloth	US, Asia: 3M 06016
Drying cloth	EU: 3M 50400
Drying cloth	Japan: 3M 05351
Cleaning agent	1161721
UV-light	US, Asia: 3M 16400
UV-light	EU: 3M 16407
UV-light	Japan: 3M 16400
Polishing top	US, Asia: 3M 05738
Polishing top	EU: 3M 09550
Polishing top	Japan: 3M 05766
Polishing agent	US, Asia: 3M 06068
Polishing agent	EU: 3M 50383
Polishing agent	Japan: 3M 05969
Polishing top	US, Asia: 3M 05733
Polishing top	EU: 3M 50388
Polishing top	Japan: 3M 05734
Drying cloth	US, Asia: 3M 06020
Drying cloth	EU: 3M 50486

ADJUSTMENT

See information on paint, grinding, and polishing. Refer to **PAINT, SANDING AND POLISHING**

Follow instructions for polishing system. Refer to **POLISHING SYSTEM**

Fig. 2: Identifying Polishing Compound And Tool
Courtesy of VOLVO CARS CORPORATION

1. **Use:** Polishing agent, US, Asia: 3M 05927

Use: Polishing agent, EU: 3M 80349

Use: Polishing agent, Japan: 3M 05939

2. **Use:** Polishing top, US, Asia: 3M 05703

   Use: Polishing top, EU: 3M 50390

   Use: Polishing top, Japan: 3M 05755

CLEANING

Fig. 3: Identifying Cleaning Materials
Courtesy of VOLVO CARS CORPORATION

1. **Use:** Cleaning agent, 1161721
2. **Use:** Drying cloth, US, Asia: 3M 06016

   Use: Drying cloth, EU: 3M 50400

   Use: Drying cloth, Japan: 3M 05351

CHECK

Fig. 4: Identifying Heating Device
Courtesy of VOLVO CARS CORPORATION

Use: UV-light, US, Asia: 3M 16400

Use: UV-light, EU: 3M 16407

Use: UV-light, Japan: 3M 16400

If the defects cannot be removed by polishing only, follow instructions for sanding.

Perform paint job, grinding, see **PAINT, SANDING**

ADJUSTMENT

RECONDITIONING/CAR CARE

CAR CARE KIT, SMALL SIZE

WARNING: Wear safety goggles and protective gloves.

WARNING: Before using the product, make sure to read and understand the Material Safety Data Sheet supplied by the manufacturer or supplier.

NOTE: Always follow the relevant supplier's recommendations.

NOTE: Do not mix products from different suppliers.

EXTERNAL CLEANING

Fig. 15: External Cleaning
Courtesy of VOLVO CARS CORPORATION

1. Rinse with clean water.
2. Degreasing
3. Rim cleaning
4. Rinse with clean water.
5. Shampooing
6. Rinse with clean water.
7. Wiping with soft cloth or shammy-leather.
8. Inspection

CAR CARE KIT, MEDIUM SIZE

WARNING: Wear safety goggles and protective gloves.

WARNING: Before using the product, make sure to read and understand the Material Safety Data Sheet supplied by the manufacturer or supplier.

NOTE: Always follow the relevant supplier's recommendations.

NOTE: Do not mix products from different suppliers.

EXTERNAL CLEANING

INTERIOR

see **INTERIOR**

ACCESSORIES AND EQUIPMENT

General - General Information

TAPE INFORMATION

COMPONENTS WITH DOUBLE-SIDED TAPE

REMOVAL OF TAPED COMPONENTS

To remove taped components, use a hot-air gun in combination with a weatherstrip tool and manual force. Do not damage the underlying components or paint.

REMOVAL OF TAPE RESIDUE

To remove the tape residue, the following is recommended:

- mechanically; finger tip or nail
- chemically; isopropanol/water 50/50 or white spirit + paper
- tool; Grinder, T9512942.

CLEANING

Always clean the tape surface before application using a mixture of isopropanol/water 50/50 or paper towel, part no. 9192678-2.

Both the surface of the tape and components must be dry and free of dirt, grease, finger marks and water/condensation.

INSTALLATION OF TAPED COMPONENTS

The following criteria must be met to reduce the risk of recurring repairs.

Ensure that:

- the surfaces maintain a temperature of at least +20°C
- the correct installation pressure is used on the taped components. The recommended pressure is approx. 35-50 N/cm^2 , which corresponds to thumb pressure. (The surface of a pushed down thumb corresponds to approx. 1 cm^2). Use scales to determine the correct application pressure. Place your hand/thumb or application roller on the scales and press until the scales show between 3.5 and 5.0 kg. Remember that the palm of your hand or application roller has a larger surface area than your thumb.
- the tape is compressed to half its original thickness for 2-3 seconds to activate the tape adhesive and obtain a maximum application area.
- that there are no gaps along the length of the tape. Do not pull the tape and try not to lift the taped components to check for any gaps. This results in poor adhesion.

IN THE EVENT OF REPEATED TAPE SLIPPAGE IN THE SAME PLACE

Use cotton buds and clear paint primer part no. 1161 727.

Carefully lift the component at the point of tape slippage and apply the primer to the painted surface using a cotton bud.

The paint primer has an "open time". Press the component into place, at least 5 mins after applying the primer and within 30 mins.

Fig. 1: Do Not Drive Vehicle Within 1 Hour Of Application
Courtesy of VOLVO CARS CORPORATION

Do not drive the vehicle with the new components within 1 hour of application.

Fig. 2: Do Not Wash Car For Next 72 Hours
Courtesy of VOLVO CARS CORPORATION

CAUTION: Make sure that the customer is advised not to wash the vehicle within the next 72 hours.

SURFACE TREATMENT MATERIAL

PAINT

PAINTWORK

Volvo Cars and our recommended paint suppliers have a long collaboration within the aftermarket. The collaboration is multifaceted. One is to maintain a market-leading level of quality in connection with repairs of Volvo Cars. Another is to jointly develop and run the parties and authorized workshops, efficiency and profitability.

The paint products that are approved by Volvo to use have undergone Volvo's very stringent requirements and quality tests. To ensure the right quality level, it is imperative that all warranty repairs are performed using the paint products that are approved within the established collaboration PIA - Paint Information Aftersales. For the same quality reasons it is recommended, of course, that the approved products are used for all paint repairs.

VOLVO CARS PREFERRED SUPPLIERS

- Sikkens
- Glasurit and R-M
- DuPont Refinish, Spies Hecker and Standox
- Nexa Autocolor and PPG
- Sherwin-Williams

POLISHING SYSTEM

GENERAL INFORMATION

A three-step polishing system has been developed by Volvo to rectify any paint defects on new vehicles.

A two-step sanding procedure has been developed to be followed by the polishing procedure.

Training, supplies as well as advice will be provided by the manufacturer 3M.

WARNING: Always follow the manufacturer's instructions for the correct servicing unit operating procedure.

Use polishing machine adjustable between 1000 RPM and 3000 RPM.

ACCESSORIES AND EQUIPMENT

General - Removal, Replacement And Installation

REMOVAL WORK FOR PANEL REPAIRS

FRONT SECTION, EXPOSING

Remove the components listed below.

- the emergency hood opener. See **HOOD, EMERGENCY OPENING**
- the hood catch. See **HOOD CATCH, REPLACING**
- the hood catch cable. See **CABLE HOOD CATCH, REPLACING**
- the front fender. See **FRONT WING, REPLACING**
- the windshield. See **WINDSCREEN, REPLACING**
- the front bumper cover strip. See **CASING BUMPER FRONT, REPLACING**
- the wiper. See **RECEIVER DRIER, REPLACING** (-2005) or **RECEIVER DRIER, REPLACING** (2006-)
- the condenser. See **CONDENSER, REPLACING** (-2005) or **CONDENSER, REPLACING** (2006-)
- the control module for the engine coolant heater. See **CONTROL MODULE ENGINE COOLANT HEATER, REPLACING**
- the dashboard. See **DASHBOARD, REPLACING**
- the steering column covers. See **REPLACING THE STEERING COLUMN COVERS**
- the front seat belt. See **SEAT BELT FRONT, REPLACING**
- the rear seat belt. See **SEAT BELT REAR, REPLACING**
- the steering wheel module (SRS). See **AIRBAG DRIVER'S SIDE (SRS), REPLACING**
- the passenger airbag module (SRS). See **AIRBAG PASSENGER (SRS), REPLACING**
- the headlamps. See **HEADLIGHT/BULB, REPLACING** (2003-2006) and **HEADLIGHT/BULB, REPLACING** (2007-2012)
- the integrated relay/fusebox in the engine compartment. See **INTEGRATED RELAY/FUSEBOX IN ENGINE COMPARTMENT**
- the central electrical unit in the engine compartment. See **CENTRAL ELECTRICAL UNIT ENGINE COMPARTMENT, REPLACING** (gasoline engines)
- the front sub-frame. See **SUB-FRAME FRONT, REPLACING**
- the wheel spindle. See **STUB AXLE, REPLACING**
- the engine. See **ENGINE/GEARBOX, REMOVING** (B5XXT), **ENGINE/TRANSAXLE, REMOVING** (B6XXT) or **ENGINE/TRANSMISSION, REMOVING** (D5XX4T). For installation, see **ENGINE/TRANSMISSION, INSTALLING** (B5XXT), see **ENGINE/TRANSAXLE, INSTALLING** (B6XXT) or **ENGINE/TRANSMISSION, INSTALLING** (D5XX4T).

CENTRAL ELECTRICAL UNIT ENGINE COMPARTMENT, REPLACING

REMOVAL

PREPARATORY WORK

NOTE: **As the graphics in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the graphics is always correct.**

Fig. 1: Disconnecting Battery Negative Cable
Courtesy of VOLVO CARS CORPORATION

- Disconnect the battery negative lead. See **BATTERY, REPLACING** . Also, see **BATTERY, DISCONNECTING**
- Remove the power steering fluid and coolant reservoirs. Lift up and move to one side
- Remove the cover from the central electrical unit
- Remove the engine control module (ECM) see **ENGINE CONTROL MODULE (ECM), REPLACING** . Remove the transmission control module (TCM) **TRANSMISSION CONTROL MODULE (TCM), REPLACING** .

REMOVING THE CENTRAL ELECTRICAL UNIT

Fig. 2: Identifying Central Electrical Unit And Clips
Courtesy of VOLVO CARS CORPORATION

Release the 3 clips.

Remove:

- intermediate section
- the engine cooling fan (FC) if applicable
- the 2 screws for the connector holder at the front edge. Disconnect the retaining clips for the connector holder using a screwdriver. Pull up the contact holder and the rubber grommet
- the screw at the rear edge of the bottom piece
- the tie straps for the cables
- the bottom section by pulling it backwards until the hook releases.

REMOVING THE CONNECTOR

Fig. 3: Disconnecting Connector By Releasing Catches At Front Edge
Courtesy of VOLVO CARS CORPORATION

- Remove the tie straps from the cables
- Disconnect the connector by releasing the locks on the front edge
- Pull out and remove the connector.

INSTALLATION

NOTE: For tightening torques, see TIGHTENING TORQUE .

INSTALLING THE CONNECTOR

Press the connector into the holder.

CENTRAL ELECTRICAL UNIT, INSTALLING

Install:

- the tie straps for the cables
- the bottom section. Hook into place at the front edge
- the screw in the rear edge. Tighten

- the connector holder. Press into the catch.

NOTE: The rubber grommet

- the screws
- the engine cooling fan (FC) if applicable
- the intermediate section. Check that all 3 clips have engaged.

FINISHING WORK

Install:

- see **ENGINE CONTROL MODULE (ECM), REPLACING** and **TRANSMISSION CONTROL MODULE (TCM), REPLACING**
- the cover for the central electrical unit
- the battery negative pole. Also, see **BATTERY, DISCONNECTING** .

ENGINE/TRANSMISSION, REMOVING

Special tools:

see **9995722**

REMOVAL

NOTE: As the graphics in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the graphics is always correct.

SAFETY

CAUTION: Take great care to avoid causing sparks when working on the fuel system. See SAFETY REGULATIONS FOR HANDLING FUEL .

REMOVING COMPONENTS

Fig. 4: Identifying Positive Lead For Starter Motor, Connector For Engine Cable Harness And Cover Over Central Electrical Unit
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery negative lead. First read, see **BATTERY, DISCONNECTING**
- the engine stabilizer brace between the suspension turrets
- the engine cover by pulling it straight up
- the cover over the central electrical unit
- the connector for the engine cable harness from the central electrical unit
- the positive lead for the starter motor from the terminal block
- the connector on the mass air flow (MAF) sensor
- the turbocharger control valve from the air cleaner (ACL). Disconnect the connector
- the intake pipe between the air cleaner (ACL) and the front cover plate
- the hose and hose clamp for the turbocharger (TC) inlet hose
- air cleaner (ACL) assembly
- the gear selector cables
- the ground lead between the engine and the left-hand frame member
- separate the transmission wiring

- the brake vacuum sensor on the vacuum pump.

DRAINING COOLANT

CAUTION: Avoid skin contact with the coolant. Close the cock.

Position a container under the radiator drain cock.

Drain the coolant.

Fig. 5: Identifying Screw For Front Exhaust Pipe And Support Bracket
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw for the front exhaust pipe and support bracket
- the 3 nuts that hold the front exhaust pipe to the turbocharger (TC).

  HINT: Tie up the front exhaust pipe at the right suspension turret

- the front SIPS member

- the propeller shaft. See **PROPELLER SHAFT, REPLACING** .

CAUTION: Mark the flange in relation to the propeller shaft joint.

Fig. 6: Identifying Front Section Of Terminal And Hose
Courtesy of VOLVO CARS CORPORATION

Remove:

- the passenger compartment heater hoses
- the engine coolant hose between the expansion tank and the engine
- the ABS line and clips from the power steering hose. Lift the power steering reservoir. Place it on top of the engine.

Fig. 7: Engine Control Module
Courtesy of VOLVO CARS CORPORATION

Remove:

- the cover for the control module box
- the control modules. Use mounting bracket see **9995722**
- the surround for the control module box.

REMOVING THE CONNECTOR, CABLE AND CABLE SLEEVE

Fig. 8: Disconnecting Connector By Releasing Catches At Front Edge
Courtesy of VOLVO CARS CORPORATION

- Remove the red retaining clip from the connector using a screwdriver
- Disconnect the connector by releasing the catches at the front edge using pliers. Gently pry out the connector using a screwdriver
- Lift the connector up and out with the protection underneath and put it to one side
- Remove the ground lead from the right-hand fender liner
- Pull out the wiring between the front cover plate and the air conditioning (A/C) pipe.

DISCONNECTING THE CONNECTOR

Fig. 9: Pulling Locking Plate Straight Up
Courtesy of VOLVO CARS CORPORATION

Remove:

- the right-hand headlamp by pulling up the two lock facings straight up and disconnecting the wiring. Place the headlamp to one side
- the connector for the air conditioning (A/C) receiver drier
- the gray connector for the fan shroud
- the connectors for the pressure and temperature sensors on the charge air cooler (CAC)
- the charge air pipes between the engine and charge air cooler
- the upper coolant hose on the engine. Push to one side
- the lower coolant hose from the radiator
- the oil coolant hoses from the oil cooler.

CAUTION: Seal the openings.

EXPOSING THE AIR CONDITIONING (A/C) COMPRESSOR

Fig. 10: AC Compressor
Courtesy of VOLVO CARS CORPORATION

CAUTION: Handle the compressor and its air conditioning (A/C) pipe with care.

- Unhook the auxiliaries belt
- Disconnect the one-pin connector for the compressor magnetic clutch
- Remove the 4 screws holding the compressor to the engine
- Tie up the compressor in the front cover plate.

REMOVING THE LOWER STEERING SHAFT JOINT

Fig. 11: Identifying Lower Steering Shaft Joint
Courtesy of VOLVO CARS CORPORATION

- Remove the soundproofing panel under the steering wheel
- Fold back the floor carpet
- Bend up the outer section of the steering shaft boot
- Remove the retaining clip around the boot
- Pull the boot up
- Turn the steering wheel to gain the best possible access to the steering shaft nut
- Remove the ignition key. Activate the steering wheel lock.

CAUTION: Do not move the steering wheel. The contact reel in the SRS (supplemental restraint system) could be damaged.

- Remove the screw from the joint in the mounting for the steering shaft
- Remove the joint from the steering shaft by pressing the shaft upwards.

REMOVING COMPONENTS

Raise the car.

Remove:

- the left and right front wheels
- the splash guard under the engine.

REMOVING THE FRONT SPLASH GUARDS

- Remove the 6 screws
- Lift up and slide the plate forward
- Remove the protective plate.

NOTE: There is a guide sleeve on the upper mounting for the plate. This must be lifted slightly so that the panel can be slid forward.

REMOVING COMPONENTS CONTINUED

Fig. 12: Identifying Length Of Track Rod In Relation To Steering Gear Housing
Courtesy of VOLVO CARS CORPORATION

Remove the tie rod from the wheel spindle. On one side, measure the length of the tie rod in relation to the steering gear housing. Note the measurement.

Fig. 13: Ball Joint Nut
Courtesy of VOLVO CARS CORPORATION

Remove:

- the link rod from the anti-roll bar
- the sound insulation cover for the drive shaft
- the nut holding the control arm to the ball joint
- the center screw and the end of the drive shaft.

SEPARATING THE FUEL LINE

NOTE: Use paper to collect any spilled fuel.

Separate the quick-release connectors for the fuel lines to the engine and engine block heater. Also, see **FUEL SYSTEM, QUICK-RELEASE CONNECTORS**.

LOWERING THE ENGINE AND THE TRANSMISSION

Fig. 14: Engine Lifted Using Lifting Table
Courtesy of VOLVO CARS CORPORATION

NOTE: **Ensure that the lifting table is centered under the sub-frame for optimal weight distribution. Check that the lifting table is correctly applied against the sub-frame.**

Use a post hoist with a lifting table and stud guides.

Secure the lifting table against the sub-frame.

REMOVING THE ENGINE COOLANT HEATER

Remove:

- the bumper cover on the left hand side. Use a weatherstrip tool
- **M8** nut at the top of the left-hand fender liner for the engine coolant heater
- the connector for the engine coolant heater.

Fig. 15: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screws for the sub-frame brackets
- the screws for the sub-frame.

CAUTION: Ensure that no hoses, wiring or other components catch when the engine and transmission unit are lowered.

Lower the engine and transmission approximately **15 cm** so that the drive shafts describe a horizontal line between the hub and transmission.

- Unhook the control arms from the ball joint pinion
- Hold the constant velocity joint. Pull the drive shaft off the hub
- Let the drive shafts rest against the control arms
- Turn the engine block heater out of its position
- Check that the air conditioning (A/C) compressor is hanging free
- Continue lowering the engine and transmission unit.

ENGINE/TRANSMISSION, INSTALLING

Special tools:

see **9512050**

see **9995722**

INSTALLATION

NOTE: **As the graphics in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the graphics is always correct.**

INSTALLING THE ENGINE AND TRANSMISSION

Fig. 16: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

- Raise the engine and the transmission unit
- Use a lifting table with locating pins
- Stop when the sub-frame is approximately **15 cm** below the frame members.

Fig. 17: Drive Shaft And Hub
Courtesy of VOLVO CARS CORPORATION

CAUTION: Ensure that the mating surfaces on the ball joints and control arms are clean.

Install:

- the drive shaft to the hub. Install the center screws. Do not tighten yet
- the ball joint to the control arm. Install the nuts. Do not tighten yet.

- Hang the engine coolant heater in position. Check that the air conditioning (A/C) compressor is correctly positioned
- Align the steering shaft joint with the hole in the firewall
- Lift the engine and transmission unit up to the frame members.

Fig. 18: Identifying Bolts, Washers And Brackets In Sub-Frame
Courtesy of VOLVO CARS CORPORATION

- Install new screws in the sub-frame. Lubricate the screws
- install washers at the front edge and engine coolant heater and the support plates at the rear edge of the sub-frame
- Tighten the screws for the sub-frame. Tighten to **105 Nm** . Angle-tighten **120°** . Use bevel protractor see **9512050**
- Start on the left hand side of the sub-frame. Continue with the right hand side. Tighten the screws for the brackets at the rear of the sub-frame. Tighten to **50 Nm** . Remove the lifting table.

CONNECTING FUEL LINES

Connect the quick-release connector and the fuel line to:

- the motor
- the engine block heater. Use lubricant **1161580** . Also, see **FUEL SYSTEM, QUICK-RELEASE CONNECTORS**.

INSTALLING THE ENGINE COOLANT HEATER

Install and tighten the **M8** nut in the upper mounting for the engine coolant heater. Connect the connector.

Install the front bumper cover strip.

ASSEMBLING THE SPRING STRUT

Fig. 19: Ball Joint Nut
Courtesy of VOLVO CARS CORPORATION

Tighten:

- the nut for the ball joint and control arm. Tighten to **80 Nm** . Counterhold with **Torx 40**
- the center screw in the drive shaft. Tighten to **50 Nm** .

Install:

- the sound insulation cover for the drive shaft
- the tie rods using the markings made during removal. Tighten to **70 Nm**
- the link rod to the anti-roll bar. Use new nuts. Tighten to **50 Nm** . Counterhold with **Torx 27** .

Install the front protective plate.

Install the front wheels. See **INSTALLING WHEELS** .

INSTALLING STEERING SHAFT JOINT

Install:

- the steering shaft joint on the steering gear and steering shaft
- the new screw. Tighten to **25 Nm**
- the steering shaft boot and snap ring. Fold back the carpet
- soundproofing panel.

INSTALLING THE AIR CONDITIONING (A/C) COMPRESSOR

Fig. 20: AC Compressor
Courtesy of VOLVO CARS CORPORATION

CAUTION: Handle the compressor carefully.

Connect the one-pin connector to the compressor magnetic clutch.

Install the auxiliaries belt.

Connect the connectors to:

- the pressure and temperature sensors on the charge air cooler (CAC)
- the fan shroud
- the pressure switch (Pressostat) on the drier bottle
- the right-hand headlamp.

Install the right-hand headlamp using the two lock facings.

INSTALL THE ENGINE WIRING IN THE DISTRIBUTION BOX

Fig. 21: Engine Control Module
Courtesy of VOLVO CARS CORPORATION

Connect the engine and transmission wiring connectors to the control module box base plate.

Press the base plate into place in the lower section of the control module box. Install the surround on the distribution box.

INSTALLING CONTROL MODULES

- Check that no pins or sockets are damaged on the connector
- Carefully press the control module down into the grooves on the inside of the control module box. Press to the limit position
- Insert tool see **9995722** around the control module
- Move the upper section of the tool forwards as far as it will go. Pull up the tool
- Press the cover into place over the control modules
- Check that the air ducts are correctly positioned
- The ground lead to the body on the right-hand fender liner.

Install:

- the engine coolant hose between the engine and expansion tank
- the ABS line using the clips for the power steering line
- The servo reservoir
- the passenger compartment heating hoses
- the propeller shaft. See **PROPELLER SHAFT, REPLACING** .

Fig. 22: Identifying Screw For Front Exhaust Pipe And Support Bracket
Courtesy of VOLVO CARS CORPORATION

Install:

- the screw for the front exhaust pipe and support bracket
- the 3 nuts that hold the front exhaust pipe to the turbocharger (TC).

WARNING: **Avoid skin contact with the paste.**

Lubricate the studs on the turbocharger (TC). Use paste **116 1408** .

NOTE: Avoid skin contact with the paste.

INSTALLING COMPONENTS

Install:

- the gear selector cables
- the wiring for the transmission
- the ground lead between the engine and the frame member on the left-hand side

- the brake vacuum hose to the vacuum pump on the engine
- the charge air hoses
- the engine coolant hoses
- the oil cooler hoses to the transmission.

NOTE: Remove any seals

- the air cleaner (ACL)
- the hose between the air cleaner (ACL) and the turbocharger (TC)
- The solenoid valve for the engine pads on the air cleaner (ACL)
- the intake pipe between the front cover plate and the air cleaner (ACL) housing.

Connect the connectors.

Fig. 23: Identifying Positive Lead For Starter Motor, Connector For Engine Cable Harness And Cover Over Central Electrical Unit
Courtesy of VOLVO CARS CORPORATION

Install:

- the positive lead for the starter motor to the terminal block

- the connector for the engine cable harness in the central electrical unit
- the cover over the central electrical unit.

FINISHING

Fig. 24: Identifying Engine Cover
Courtesy of VOLVO CARS CORPORATION

Install:

- the engine cover
- the engine stabilizer brace between the suspension turrets
- a new tie strap for the servo hose
- the cable to the battery negative terminal. First read, see **BATTERY, DISCONNECTING** .

Top up and check the engine oil and engine coolant.

FUNCTION TEST

CAUTION: To prevent damage to the engine fuel injection pump, the tank pump must be activated for 80 seconds by turning the ignition key to position 2.

Run the engine at fast idle speed until the thermostat opens.

Ensure that the heater control in the passenger compartment is at the maximum position. Check the engine for leaks.

Top up the coolant if necessary. Install the lower engine cover.

FUEL SYSTEM, QUICK-RELEASE CONNECTORS

Special tools:

9995666

9512666

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

There are different types of quick-release connector in the fuel system. Special tools are required for some connectors (see below).

Fig. 25: Identifying Catch And Special Tool 9995666

If the catch appears as illustrated, special tool **9995666** must be used to press in the catch.

Fig. 26: Identifying Catch And Special Tool 9512666

If the connector has an internal catch, special tool **9512666** must be used.

REAR SECTION, EXPOSING

Remove the listed components.

- the tailgate. See **TAILGATE, REPLACING**
- the lock unit for the fuel tank filler cover. See **LOCK UNIT FUEL TANK FILLER COVER, REPLACING**
- the rear side window. See **SIDE WINDOW REAR, REPLACING**
- the seat frame. See **SEAT FRAME (THIRD ROW), REPLACING**
- the side panel in the cargo compartment. See **SIDE PANEL CARGO COMPARTMENT, REPLACEMENT**
- the headlining. See **HEADLINING, REPLACING**
- the rear bumper cover. See **CASING BUMPER REAR, REPLACING**
- the tail lamp. See **BULB TAIL LAMP/STOP LAMP/BACK-UP LAMP/FOG LAMP, REPLACING**
- the fuel tank. See **FUEL TANK, REPLACING** (AWD) or **FUEL TANK, REPLACING** (non AWD).

ROOF SECTION, EXPOSING

Remove the listed components.

- the sun roof. See **SUN ROOF, REPLACING**

OCCUPANT WEIGHT SENSOR (OWS) (2005-12)

OCCUPANT WEIGHT SENSOR (OWS), CHECKING

NOTE: **The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.**

SYSTEM DESCRIPTION

SYSTEM DESCRIPTION OF THE OCCUPANT WEIGHT SENSOR (OWS)

Fig. 1: Identifying Front Passenger Seat Cushion
Courtesy of VOLVO CARS CORPORATION

The occupant weight sensor (OWS) has a pressure sensor/cushion filled with silicone located under the front seat cushion of the passenger seat.

CAUTION: Silicon can:

- damage surrounding materials
- interfere with the functions of electrical components
- make the application of paint and adhesive difficult.

CHECK

Any leakage from the occupant weight sensor (OWS) can be detected by a visual check of the passenger seat and surrounding area. Sticky transparent stains in the area may indicate silicone leakage.

Leakage can also be detected when handling the passenger seat.

The SRS (supplemental restraint system) indicator lamp in the combined instrument panel is activated when approximately 30% of the silicone has leaked out of the pressure sensor/ cushion. The capacity is approximately 500 g silicone.

CHECKING FOR LEAKAGE

Remove the front passenger seat. See **FRONT SEAT, REPLACING** .

Take the front seat to a secluded location in the workshop, away from the body and paint shop.

Remove the pressure sensor/cushion. See **REMOVING THE OCCUPANT WEIGHT SENSOR (OWS)** .

Check if the pressure sensor/cushion is sticky anywhere; If this is the case, silicone is leaking.

CAUTION: The leaking pressure sensor/cushion must be placed in a plastic bag and sealed with tape. The plastic bag must be disposed of according to the workshop procedure for silicone waste.

CORRECTIVE ACTION

CORRECTIVE ACTION IN EVENT OF LEAKAGE

Clean/decontaminate after silicone leakage. See **OCCUPANT WEIGHT SENSOR (OWS), CLEANING**.

CORRECTIVE ACTION IN THE EVENT OF NON-LEAKING PRESSURE SENSOR, CUSHION

Install the pressure sensor/cushion. See **INSTALLING THE OCCUPANT WEIGHT SENSOR (OWS)** .

CAUTION: Store the ID number for the occupant weight sensor (OWS). See VIDA vehicle communication.

WARNING: Calibrate the Occupant weight sensor (OWS). See VIDA vehicle communication.

OCCUPANT WEIGHT SENSOR (OWS), CLEANING

NOTE: The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.

CLEANING/DECONTAMINATION

CLEANING AFTER LEAKAGE

Use Volvos cleaning agent "Cleaner H", P/N 1161 436-9 (see the Volvo chemicals catalog), and a clean lint-free cloth or similar to clean the vehicle and the seat.

WARNING: Follow the instructions on the safety sheet when using "Cleaner H". Use suitable gloves and protective goggles. Wash your hands after using "Cleaner H".

Use sawdust to absorb and remove any silicon dropped on the workshop floor or other surfaces. Sweep up the sawdust with the silicon into a plastic bag.

CAUTION: The plastic bag must be disposed of according to the workshop procedure for flammable waste.

Clean the equipment and surfaces using cleaner H and paper wipes.

CLEANING COMPONENTS

The following components must always be inspected after contamination by silicon and cleaned if contaminated:

- the seat cushion upholstery
- the backrest cushion upholstery
- the metal structure of the base
- the cable harness and connectors under the passenger seat
- the electrical components under the passenger seat
- the floor carpet on the passenger side
- the floor carpet behind the passenger seat.

REPLACING COMPONENTS

The following components must always be replaced if silicon leakage is confirmed:

- pressure sensor/silicon cushion, the foam rubber (seat cushion) and the occupant weight sensor (OWS). See **REPLACING THE OCCUPANT WEIGHT SENSOR (OWS)** .

FINISHING

HANDLING THE WASTE

All materials used for cleaning and decontamination must be disposed of according to the workshop procedure for flammable waste.

STORING THE ID NUMBER FOR THE OCCUPANT WEIGHT SENSOR (OWS)

CAUTION: Store the ID number for the occupant weight sensor (OWS).

CALIBRATING THE OCCUPANT WEIGHT SENSOR (OWS)

WARNING: Calibrate the Occupant weight sensor (OWS).

CARGO COMPARTMENT FLOOR SUPPORT/BASE PLATE FRONT, MODIFYING (2003-04)

NOTE: The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.

PREPARATORY WORK

IMPORTANT INFORMATION

NOTE: This method only applies to 5 seat vehicles.

When the support for the floor in the cargo compartment, but not the front base plate, is replaced, the new, higher support for the floor in the cargo compartment must be modified. The same applies to the front base plate, if installed on an old support for the floor in the cargo compartment.

REPLACING THE SUPPORT FOR THE FLOOR IN THE CARGO COMPARTMENT OR FRONT BASE PLATE

To replace the support for the cargo compartment floor, see **CARGO FLOOR SUPPORT, 5 SEATER VERSION, REPLACING** .

To replace the front base plate, lift the old base plate. Carry out the necessary modifications to the new plate and install the new base plate.

MODIFYING

MODIFYING THE SUPPORT FOR THE CARGO COMPARTMENT FLOOR

Fig. 2: Identifying Distance A
Courtesy of VOLVO CARS CORPORATION

A = 50 mm, measure inwards from the outer edge of the flange.

Fig. 3: Cutting Out Marked Section
Courtesy of VOLVO CARS CORPORATION

Cut-out the marked section as shown. First cut across then along the flange. Remove the section.

CAUTION: Do not cut a hole in the carpet.

Fig. 4: Removing Marked Section
Courtesy of VOLVO CARS CORPORATION

MODIFYING THE FRONT BASE PLATE FOR THE BELTS

Fig. 5: Identifying Distance B
Courtesy of VOLVO CARS CORPORATION

Make markings for the center of the holes according to the following graphics.

HINT: Use a straight tool against the edge to facilitate measuring.

B = 760 mm, measure from the left edge.

Fig. 6: Identifying Distance C
Courtesy of VOLVO CARS CORPORATION

C = 75 mm, measure from the front edge.

Fig. 7: Identifying Distance D And E
Courtesy of VOLVO CARS CORPORATION

D = 100 mm, measure from the marking for the first hole center.

E = 75 mm, measure from the front edge.

Cut out two 50 mm circular holes.

MODIFYING THE FRONT BASE PLATE FOR INSTALLING THE HANDLE

Fig. 8: Identifying Distance G And H
Courtesy of VOLVO CARS CORPORATION

G = 105 mm.

H = 13 mm, measure from the bottom of the base plate.

Drill a 10 mm hole.

Fig. 9: Identifying Distance I And J
Courtesy of VOLVO CARS CORPORATION

I = 160 mm, measure from the lower left-hand corner.

J = 16 mm, measure from the bottom of the base plate.

Drill a 15 mm hole.

SEATS (2003-12)

CLEANING UPHOLSTERY

The vehicle's upholstery, like the rest of the components, care in the form of regular maintenance. Cleaning and impregnation must be repeated at regular intervals, one to four times a year (more often if needed), so that the upholstery retains its clean look. This is just as important for textile and leather upholsteries of all colours.

TREATMENT

Volvo Cars has developed environment-adapted systems for cleaning and impregnating upholsteries included in the range and are available for all Volvo Cars workshops. Perform cleaning and impregnation according to instructions supplied with the product for textile and leather care.

KEEP IN MIND:

- The upholstery must be vacuum-cleaned thoroughly before starting treatment to prevent including impurities, e. g., small stones, during cleaning.
- The upholstery must be allowed to dry between cleaning and impregnating according to the supplied instructions.
- The upholstery must be allowed to dry after impregnating.

PRODUCTS

You can read about the environment-adapted systems developed by Volvo Cars in the chemical catalogue in the section interior care. Perform cleaning and impregnation according to instructions supplied with the product for textile and leather care.

Fig. 10: Cleaning Materials For Textile Upholstery
Courtesy of VOLVO CARS CORPORATION

For textile upholstery. **Use:** Textile care, 9510250

Fig. 11: Cleaning Materials For Leather Upholstery
Courtesy of VOLVO CARS CORPORATION

For leather upholstery. **Use:** Leather care, 9510251

CUSTOMER CONTACT

Refer to care and service in the owner's manual as well as to the folder supplied in vehicles featuring leather upholstery from and incl. model year 2008.

After some time in use the leather's natural appearance will be more or less evident, depending on the leather's surface structure. This is natural aging of the leather and shows that it is a natural product.

POINT OUT ESPECIALLY:

- The upholstery requires regular maintenance to retrain its qualities, one to four times a year (more often if needed).
- Sharp objects and Velcro straps may damage the vehicle's upholstery.
- Materials that colour, e. g., jeans and suede, etc., may discolour the vehicle's upholstery.
- Never use powerful solvents. These may damage both textile, vinyl, and leather upholstery.

Interior - Diagnostic Trouble Codes and Associated Procedures

PSM-0001: HALL SENSOR 1. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Fig. 1: Identifying Power Seat Motor Location
Courtesy of VOLVO CARS CORPORATION

Motor 1 controls the seat front-rear adjustment. Motor 1 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0001 is stored if no Hall sensor pulse is detected when motor 1 is activated and in operation.

Possible Source

- Defective Hall sensor in motor 1.
- Short-circuit to supply voltage or ground in the signal cable.
- Open-circuit in the signal cable to the Hall sensor.

Fault symptom[s]

- Automatic seat control does not function (automatic control of other motors functioning as normal).

FAULTY SIGNAL. INTERMITTENT FAULT

CHECKING CABLE

Check the power seat module (PSM) and motor connector for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

The Hall sensor is integrated in the motor.

Check the wiring between the power seat module (PSM) and the sensor according to the table below for an intermittent open-circuit according to **OPEN-CIRCUIT, INTERMITTENT FAULTS** , an intermittent short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS** and an intermittent short-circuit to supply voltage according to **SHORT-CIRCUIT TO SUPPLY VOLTAGE, INTERMITTENT FAULTS** .

DTC	Covers motor	Terminal	Terminal
PSM-0001	M1	#3E	#4E
PSM-0002	M2	#3D	#4D
PSM-0003	M3	#7E	#8E
PSM-0004	M4	#11E	#12E

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **OUTPUT SIGNALS TO THE MOTORS** .

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-0019: MEMORY FUNCTION 1. INTERNAL FAULT. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

The power seat module (PSM) can store a seat setting in memory position 1. Memory button 1 must be activated for the diagnostic trouble code (DTC) to be detected. Diagnostic trouble code (DTC) PSM-0019 is stored if the power seat module (PSM) detects that the setting in memory position 1 does not correspond with a calculated check sum.

Possible Source

- Memory position 1 not stored.
- Memory position incorrectly stored.

Fault symptom[s]

- Memory button does not function.

INTERNAL FAULT. INTERMITTENT FAULT

FAULT-TRACING INFORMATION

Internal fault in the power seat module (PSM). Replace the power seat module (PSM). See **POWER SEAT MODULE (PSM), REPLACING** (2005-2012) or **POWER SEAT MODULE (PSM), REPLACING** (2003-2004).

PSM-0019: MEMORY FUNCTION 1. INTERNAL FAULT. PERMANENT FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

INTERNAL FAULT. PERMANENT FAULT

CHECKING SEAT FUNCTION

Program in seat position 1.

Move seat to another position.

Attempt to move the seat to memory position 1.

Does the memory function correctly?

- **YES**

OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE CONTROL PANEL**

CHECKING THE CONTROL PANEL

Check whether the signal from the control panel is received by the power seat module (PSM).

To read off the input signal to the power seat module (PSM) for memory button 1, select Mem 1 from the menu.

Read off the value.

HINT: When checking the control panel, check if the resistance between terminal #6C and the terminal pin is 0 ohms.

Button	Measure at:
Memory button 1	#2C

Other information

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 40: Breakout Box

Fig. 41: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the value change?

- **YES**

  Refer to **CHECKING THE MEMORY IN THE POWER SEAT MODULE (PSM)**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the control panel:

- See **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).
- **Continue**

  Refer to **VERIFICATION**

CHECKING THE MEMORY IN THE POWER SEAT MODULE (PSM)

The power seat module (PSM) has detected a fault in the memory. Try programming in a new seat position. If this does not work, the actual seat position can be compared with the programmed seat position.

As soon as the memory has been programmed the actual value should be the same as the programmed value.

Fig. 42: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the memory function correctly?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the power seat module (PSM) according to **POWER SEAT MODULE (PSM), REPLACING** (2005-2012) or **POWER SEAT MODULE (PSM), REPLACING** (2003-2004).

- **Continue**

Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

The check is performed by checking the diagnostic trouble code (DTC) status.

Fig. 43: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Is the diagnostic trouble code (DTC) now intermittent?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-001A: MEMORY FUNCTION 2. INTERNAL FAULT. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

The power seat module (PSM) can store a seat setting in memory position 2. Memory button 2 must be activated for the diagnostic trouble code (DTC) to be detected. Diagnostic trouble code (DTC) PSM-001A is stored if the power seat module (PSM) detects that the setting in memory position 2 does not correspond with a calculated check sum.

Possible Source

- Memory position 2 not stored.
- Memory position incorrectly stored.

Fault symptom[s]

- Memory function 2 does not function.

INTERNAL FAULT. INTERMITTENT FAULT

see **INTERNAL FAULT. INTERMITTENT FAULT**

PSM-001A: MEMORY FUNCTION 2. INTERNAL FAULT. PERMANENT FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

INTERNAL FAULT. PERMANENT FAULT

CHECKING SEAT FUNCTION

Program in seat position 2.

Move seat to another position.

Attempt to move the seat to memory position 2.

Does the memory function correctly?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE CONTROL PANEL**

CHECKING THE CONTROL PANEL

Check whether the signal from the control panel is received by the power seat module (PSM).

To read off the input signal to the power seat module (PSM) for memory button 2, select Mem 2 from the menu.

Read off the value.

HINT: When checking the control panel, check if the resistance between terminal #6C and the terminal pin is 0 ohms.

Button	Measure at:
Memory button 2	#1C

Other information

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 44: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 45: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the value change?

- **YES**

  Refer to **CHECKING THE MEMORY IN THE POWER SEAT MODULE (PSM)**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the control panel. See **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

- **Continue**

  Refer to **VERIFICATION**

CHECKING THE MEMORY IN THE POWER SEAT MODULE (PSM)

The power seat module (PSM) has detected a fault in the memory. Try programming in a new seat position. If this does not work, the actual seat position can be compared with the programmed seat position.

As soon as the memory has been programmed the actual value should be the same as the programmed value.

Fig. 46: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the memory function correctly?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the power seat module (PSM) according to **POWER SEAT MODULE (PSM), REPLACING** (2005-2012) or **POWER SEAT MODULE (PSM), REPLACING** (2003-2004)..

- **Continue**

Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

The check is performed by checking the diagnostic trouble code (DTC) status.

Activate button

Fig. 47: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Is the diagnostic trouble code (DTC) now intermittent?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-001B: MEMORY FUNCTION 3. INTERNAL FAULT. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

The power seat module (PSM) can store a seat setting in memory position 3. Memory button 3 must be activated for the diagnostic trouble code (DTC) to be detected. Diagnostic trouble code (DTC) PSM-001B is stored if the power seat module (PSM) detects that the setting in memory position 3 does not correspond with a calculated check sum.

Possible Source

- Memory position 3 not stored.
- Memory position incorrectly stored.

Fault symptom[s]

- Memory function 3 does not function.

INTERNAL FAULT. INTERMITTENT FAULT

see **INTERNAL FAULT. INTERMITTENT FAULT**

PSM-001B: MEMORY FUNCTION 3. INTERNAL FAULT. PERMANENT FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

INTERNAL FAULT. PERMANENT FAULT

CHECKING SEAT FUNCTION

Program in seat position 3.

Move seat to another position.

Attempt to move the seat to memory position 3.

Does the memory function correctly?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **CHECKING THE CONTROL PANEL**

CHECKING THE CONTROL PANEL

Check whether the signal from the control panel is received by the power seat module (PSM).

To read off the input signal to the power seat module (PSM) for memory button 3, select Mem 3 from the menu.

Read off the value.

HINT: When checking the control panel, check if the resistance between terminal #6C and the terminal pin is 0 ohms.

Button	Measure at:
Memory button 3	#16C

Other information

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 48: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Does the value change?

- **YES**

  Refer to **CHECKING THE MEMORY IN THE POWER SEAT MODULE (PSM)**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the control panel. See **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

- **Continue**

  Refer to **VERIFICATION**

CHECKING THE MEMORY IN THE POWER SEAT MODULE (PSM)

The power seat module (PSM) has detected a fault in the memory. Try programming in a new seat position. If this does not work, the actual seat position can be compared with the programmed seat position.

As soon as the memory has been programmed the actual value should be the same as the programmed value.

Fig. 50: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the memory function correctly?

- **YES**

  Refer to **VERIFICATION**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the power seat module (PSM) according to **POWER SEAT MODULE (PSM), REPLACING** (2005-12) or **POWER SEAT MODULE (PSM), REPLACING** (2003-04).

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

The check is performed by checking the diagnostic trouble code (DTC) status.

Activate button

Fig. 51: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Is the diagnostic trouble code (DTC) now intermittent?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-001C: CONTROL PANEL. SIGNAL MISSING. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Diagnostic trouble code (DTC) PSM-001C is stored if the power seat module (PSM) registers an open-circuit in the LH/RH detection.

Possible Source

- Control panel not connected.
- Defective control panel.
- Open-circuit in the control circuit (LH/RH).

Fault symptom[s]

- The seat does not function at all via the control panel.

SIGNAL MISSING. INTERMITTENT FAULT

CHECKING CONTROL PANEL TERMINALS

Check that the control panel is correctly connected to the seat.

Check the control circuit between the power seat module (PSM) #4C and #5C. Check for an open-circuit. See **OPEN-CIRCUIT, INTERMITTENT FAULTS** .

Remedy as necessary.

Other information

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 52: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 53: Identifying Ohmmeter
Courtesy of VOLVO CARS CORPORATION

Fig. 54: Connector, Green (16-Pin)
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING COMPONENT**

REPLACING COMPONENT

Try a new control panel.

Other information:

- For information about signals, see **SIGNAL SPECIFICATION, POWER SEAT MODULE**
- To access or replace the control panel, see **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

PSM-001C: CONTROL PANEL. SIGNAL MISSING. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

SIGNAL MISSING. PERMANENT FAULT

CHECKING CONTROL PANEL TERMINALS

Check that the control panel is correctly connected to the seat.

Check the control circuit between #C4 and #C5. Check for an open-circuit. See **OPEN-CIRCUIT, PERMANENT FAULTS** .

Remedy as necessary

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 55: Breakout Box

Fig. 57: Connector, Black (8-Pin)
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

Replace the control panel. See **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

PSM-001D: CONTROL MODULE, RELAY. INTERNAL FAULT. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Diagnostic trouble code (DTC) PSM-001D is stored if the power seat module (PSM) registers a fault in the main relay or in the power supply.

Possible Source

- Defective power seat module (PSM).
- No power supply to the motors.

Fault symptom[s]

- The seat does not function at all.

INTERNAL FAULT. INTERMITTENT FAULT

CHECKING SUPPLY

Check passenger compartment fuse 4 (11C/4:2)

Check the cable between the power seat module (PSM) terminal #A1 and passenger compartment fuse 4 (11C/4:2). Check for contact resistance and oxidation. See **CONTACT RESISTANCE AND OXIDATION** .

If the fuse has blown fault-trace for an intermittent short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS**

Check the connector

Check passenger compartment fuse 24 (11C/24:2)

Check the cable between power seat supply relay (2/29) #3 and passenger compartment fuse 24 (11C/24:2). Check for an intermittent short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS** . Check for contact resistance and oxidation. See **CONTACT RESISTANCE AND OXIDATION** .

Check that the relay is not is defective.

Check the cable between the power seat module (PSM) #B1 and power seat supply relay (2/29) #1. Check for an intermittent short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS** . Check for contact resistance and oxidation. See **CONTACT RESISTANCE AND OXIDATION** .

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **SIGNAL SUPPLY** .

Fig. 58: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 59: Identifying Ohmmeter
Courtesy of VOLVO CARS CORPORATION

Fig. 60: Fuse Holder (Passenger Compartment)
Courtesy of VOLVO CARS CORPORATION

Was a fault detected?

- **YES**

  Refer to **INFORMATION**

- **NO**

  Refer to **REPLACING THE COMPONENT**

REPLACING THE COMPONENT

An internal relay in the power seat module (PSM) has stuck in active position.

Try to activate the motor.

Check the supply to the control modules.

If no faults were found, try a new power seat module (PSM).

Other information:

- For information about replacing the control module, see **POWER SEAT MODULE (PSM), REPLACING** (2005-12) or **POWER SEAT MODULE (PSM), REPLACING** (2003-04).

INFORMATION

FAULT-TRACING INFORMATION

If the fault is intermittent, do not verify fault-tracing if the fault does not recur.

It is possible to view the information again, or leave fault-tracing for this diagnostic trouble code (DTC).

PSM-001D: CONTROL MODULE, RELAY. INTERNAL FAULT. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

INTERNAL FAULT. PERMANENT FAULT

CHECKING SUPPLY

Check passenger compartment fuse 4 (11C/4:2).

Check the cable between the power seat module (PSM) connector #A1 and passenger compartment fuse 4 (11C/4:2). Check for an open-circuit. See **OPEN-CIRCUIT, PERMANENT FAULTS**

If the fuse has blown, fault-trace for a short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** .

Check connector (54/24:1)

Check passenger compartment fuse 24 (11C/24:2)

Check the cable between power seat module (PSM) supply relay (2/29) #3 and passenger compartment fuse 24 (11C/24:2). Check for a short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** . Check for an open-circuit. See **OPEN-CIRCUIT, PERMANENT FAULTS** .

Check that the relay is not defective.

Check the cable between the power seat module (PSM) connector terminal #B1 and power seat supply relay (2/29) #1. Check for a short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** . Check for an open-circuit. See **OPEN-CIRCUIT, PERMANENT FAULTS** .

Remedy as necessary.

Other information

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

Fig. 61: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 62: Identifying Ohmmeter
Courtesy of VOLVO CARS CORPORATION

Fig. 63: Fuse Holder (Passenger Compartment)
Courtesy of VOLVO CARS CORPORATION

Were any faults found?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACE/PROGRAM COMPONENT**

REPLACE/PROGRAM COMPONENT

An internal relay in the power seat module (PSM) is defective.

Reprogram the power seat module (PSM).

Other information

- For further information about programming and replacing the power seat module (PSM), see **POWER SEAT MODULE (PSM), REPLACING** (2005-12) or **POWER SEAT MODULE (PSM), REPLACING** (2003-04).

PSM-001E: BATTERY VOLTAGE. SIGNAL TOO LOW. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Fig. 64: Identifying Battery
Courtesy of VOLVO CARS CORPORATION

The voltage to the power seat module (PSM) is too low in relation to the voltage in the central electronic module (CEM). Diagnostic trouble code (DTC) PSM-001E is stored if the voltage is more than 2.5 V under the CEM voltage.

Possible Source

- Supply voltage too low.

Fault symptom[s]

- The seat does not function at all.

SIGNAL TOO LOW. INTERMITTENT FAULT

CHECKING SUPPLY

Check the cable between power seat module (PSM) #A1 and the fusebox in passenger compartment 4 (11C/4:2) for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** , and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

Check connector (54/24:1) for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** , and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

Check fuse no. 24 (11C/24:2) in passenger compartment fusebox for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** , and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

Check the cable between power seat supply relay (2/29) #3 and fuse no. 24 (11C/24:2) in the passenger compartment fusebox for an intermittent short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS** , or for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** , and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

Check that the relay is not defective; check for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** , and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

Check the cable between the power seat module (PSM) #B1 and power seat supply relay (2/29) #1 for an intermittent short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS** , or for contact resistance and oxidation according to **CONTACT RESISTANCE AND OXIDATION** , and loose connections according to **LOOSE CONNECTIONS (TERMINALS)** .

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

PSM-001E: BATTERY VOLTAGE. SIGNAL TOO LOW. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

SIGNAL TOO LOW. PERMANENT FAULT

CHECKING VOLTAGE LEVEL

Read of the voltage level in the control modules.

NOTE: None of the motors should be operating when reading off.

The levels between the central electronic module (CEM) and the power seat module (PSM) should not deviate by more than a maximum of one volt. A small difference as a result of contact resistance is acceptable.

Fig. 68: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Are the voltage levels OK?

- **YES**

  Refer to **FAULT-TRACING INFORMATION**

- **NO**

  Refer to **CHECKING SUPPLY**

FAULT-TRACING INFORMATION

The fault is not currently present but has been previously.

CHECKING SUPPLY

Check passenger compartment fuse 4 (11C/4:2)

Check the cable between the power seat module (PSM) connector #A1 and passenger compartment fuse 4 (11C/4:2) for an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS** .

If the fuse has blown fault-trace for a short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** .

Check the connector.

Check passenger compartment fuse 24 (11C/24:2)

Check the cable between power seat module (PSM) supply relay (2/29) #3 and passenger compartment fuse 24 (11C/24:2) for a short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** or open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS** .

Check that the relay is not is defective.

Check cable between power seat module (PSM) connector #B1 and power seat module (PSM) supply relay (2/29) #1 for a short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** or open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS** .

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information about signals and connectors, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

PSM-0020: FRONT-REAR ADJUSTMENT CONTROL, M1+. TOO SLOW. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

The M1+ button must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0020 is stored if button M1+ has been activated for longer than 60 seconds.

Possible Source

- Button M1+ has jammed in the depressed position.
- Defective control panel.

Fault symptom[s]

- The operation button does not function.

TOO-LONG: TIME. INTERMITTENT FAULT

CHECKING CONTROL PANEL

Check the power seat module (PSM) and the control panel connectors. Check for intermittent short-circuit to ground. See **SHORT-CIRCUIT TO GROUND, INTERMITTENT FAULTS** . Check for contact resistance and oxidation. See **CONTACT RESISTANCE AND OXIDATION** . Check for loose connections. See **LOOSE CONNECTIONS (TERMINALS)** .

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

TOO-LONG: TIME. PERMANENT FAULT

see **TOO LONG TIME. PERMANENT FAULT**

PSM-0028: OPERATING BUTTON, MEMORY 1. TOO SLOW. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Memory button 1 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0028 is stored if memory button 1 has been activated for longer than 60 seconds.

Possible Source

- Memory button 1 is jammed in the depressed position.
- Defective control panel.

Fault symptom[s]

- Button 1 does not function.

TOO-LONG: TIME. INTERMITTENT FAULT

see **TOO LONG TIME. INTERMITTENT FAULT**

PSM-0028: OPERATING BUTTON, MEMORY 1. TOO SLOW. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

TOO-LONG: TIME. PERMANENT FAULT

see **TOO LONG TIME. PERMANENT FAULT**

PSM-0029: OPERATING BUTTON, MEMORY 2. TOO SLOW. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Memory button 2 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0029 is stored if memory button 2 has been activated for longer than 60 seconds.

Possible Source

- Memory button 2 is jammed in the depressed position.
- Defective control panel.

Fault symptom[s]

- Button 2 does not function.

TOO-LONG: TIME. INTERMITTENT FAULT

see **TOO LONG TIME. INTERMITTENT FAULT**

PSM-0029: OPERATING BUTTON, MEMORY 2. TOO SLOW. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

TOO-LONG: TIME. PERMANENT FAULT

see **TOO LONG TIME. PERMANENT FAULT**

PSM-002A: OPERATING BUTTON, MEMORY 3. TOO SLOW. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Memory button 3 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-002A is stored if button 3 has been activated for longer than 60 seconds.

Possible Source

- Memory button 3 is jammed in the depressed position.
- Defective control panel.

Fault symptom[s]

- Button 3 does not function.

TOO-LONG: TIME. INTERMITTENT FAULT

see **TOO LONG TIME. INTERMITTENT FAULT**

PSM-002A: OPERATING BUTTON, MEMORY 3. TOO SLOW. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

TOO-LONG: TIME. PERMANENT FAULT

see **TOO LONG TIME. PERMANENT FAULT**

PSM-002B: MEMORY BUTTON. TOO SLOW. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

The MEM memory button must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-002B is stored if a memory button has been activated for longer than 60 seconds.

Possible Source

- A memory button has jammed in the pressed in position.
- Defective control panel.

Fault symptom[s]

- The memory button does not function.

TOO-LONG: TIME. INTERMITTENT FAULT

see **TOO LONG TIME. INTERMITTENT FAULT**

PSM-002B: MEMORY BUTTON. TOO SLOW. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

TOO-LONG: TIME. PERMANENT FAULT

see **TOO LONG TIME. PERMANENT FAULT**

PSM-002C: BUTTON COMBINATION NOT PERMISSIBLE, M1+ AND M1-. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Diagnostic trouble code (DTC) PSM-002C is stored if M1+ and M1- are activated at the same time.

Possible Source

- Faulty control panel operation.

- Defective control panel.
- Defective power seat module (PSM).

Fault symptom[s]

- Power seat does not function at all.

FAULT-TRACING INFORMATION

see **FAULT-TRACING INFORMATION**

PSM-002C: BUTTON COMBINATION NOT PERMISSIBLE, M1+ AND M1-. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

FAULTY SIGNAL. PERMANENT FAULT

CHECKING THE CONTROL PANEL

Check if the signal from the control panel is received by the power seat module (PSM).

Read off the value.

HINT: When checking the control panel, check if the resistance between #6C and the terminal pin is 0 ohms.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 76: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 77: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the value change?

- **YES**

OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING THE CONTROL PANEL**

REPLACING THE CONTROL PANEL

Replace the control panel. See **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

HINT: After carrying out the repair it is important to check that the fault is no longer present.

HINT: Read off the value.

Fig. 78: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the motor now operate as it should?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-002D: BUTTON COMBINATION NOT PERMISSIBLE, M2+ AND M2-. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Diagnostic trouble code (DTC) PSM-002D is stored if M2+ and M2- are activated at the same time.

Possible Source

- Faulty control panel operation.
- Defective control panel.
- Defective power seat module (PSM).

Fault symptom[s]

- Power seat does not function at all.

FAULT-TRACING INFORMATION

see **FAULT-TRACING INFORMATION**

PSM-002D: BUTTON COMBINATION NOT PERMISSIBLE, M2+ AND M2-. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

FAULTY SIGNAL. PERMANENT FAULT

see **FAULTY SIGNAL. PERMANENT FAULT**

PSM-002E: BUTTON COMBINATION NOT PERMISSIBLE, M3+ AND M3-. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Diagnostic trouble code (DTC) PSM-002E is stored if M3+ and M3- are activated at the same time.

Possible Source

- Faulty control panel operation.
- Defective control panel.
- Defective power seat module (PSM).

Fault symptom[s]

- Power seat does not function at all.

FAULT-TRACING INFORMATION

see **FAULT-TRACING INFORMATION**

PSM-002E: BUTTON COMBINATION NOT PERMISSIBLE, M3+ AND M3-. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **FAULTY SIGNAL. PERMANENT FAULT**

PSM-0030: FRONT-REAR ADJUSTMENT, MOTOR 1 (M1+). SIGNAL MISSING. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Fig. 79: Identifying Power Seat Motor Location
Courtesy of VOLVO CARS CORPORATION

Motor 1 controls the seat front-rear adjustment. Motor 1 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0030 is stored if the motor 1 does not run despite M1+ being activated and the power seat module registering +12 V on the M1+ signal cable.

Possible Source

- Open-circuit in signal cable M1+.
- Blown fuse (11C/4).

Fault symptom[s]

- Seat front-rear adjustment does not operate.

SIGNAL MISSING. INTERMITTENT FAULT

CHECKING CABLE

Check the cable between the power seat module (PSM) and the motor for an open-circuit according to **OPEN-CIRCUIT, INTERMITTENT FAULTS** .

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information about signals, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

SIGNAL MISSING. PERMANENT FAULT

CHECKING WIRING

Fig. 82: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on
- Try to activate the motor.

HINT: The resistance between #1E and #2E must be approximately 0 ohms.

Check the cable between the power seat module (PSM) #1E and the motor. Check for an open-circuit. See **OPEN-CIRCUIT, PERMANENT FAULTS** .

Remedy as necessary.

If no fault is found, try replacing the motor.

Other information:

- To access or replace the motor, see **ELECTRIC MOTOR CUSHION, REPLACING** (-2004) or **ELECTRIC MOTOR CUSHION, REPLACING** (2005-)
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)**
- For information about signals, see **CONNECTOR, BLACK (12-PIN)** .

Does the motor operate as it should?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-0031: FRONT-REAR ADJUSTMENT, MOTOR 1 (M1-). SIGNAL MISSING. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Fig. 87: Identifying Power Seat Motor Location
Courtesy of VOLVO CARS CORPORATION

Motor 1 controls the seat front-rear adjustment. Motor 1 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0031 is stored if the motor 1 does not run despite M1- being activated and the power seat module registering +12 V on the M1- signal cable.

Possible Source

- Open-circuit in signal cable M1-.
- Blown fuse (11C/4).

Fault symptom[s]

- Seat front-rear adjustment does not operate.

SIGNAL MISSING. INTERMITTENT FAULT

see **SIGNAL MISSING. INTERMITTENT FAULT**

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-0032: BACKREST, MOTOR 2 (M2+). SIGNAL MISSING. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Fig. 93: Identifying Power Seat Backrest Rake Motor
Courtesy of VOLVO CARS CORPORATION

Motor 2 controls the backrest rake. Motor 2 must be activated before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-0032 is stored if motor 2 does not run despite M2+ being activated and the power seat module registering +12 V on the M2+ signal cable.

Possible Source

- Open-circuit in signal cable M2+.
- Blown fuse (11C/4).

Fault symptom[s]

- The angle of the backrest cannot be adjusted.

SIGNAL MISSING. INTERMITTENT FAULT

see **SIGNAL MISSING. INTERMITTENT FAULT**

Fig. 127: Audio Control Module (AUM)/External Amplifier To Loudspeakers, Gray Connector
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  Refer to **VERIFICATION**

VERIFICATION

Activate the motor.

Fig. 128: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the motor operate as it should?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

PSM-0038: WRONG SOFTWARE (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

No conditions.

Possible Source

- Software fault in the control module
- Defective control module.

Fault symptom[s]

- Seat operation does not function
- Symptoms may be missing.

FAULT-TRACING INFORMATION

see **FAULT-TRACING INFORMATION**

PSM-003A: HALL SENSOR 1. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Motor 1 must be switched off before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-003A is stored if the power seat module (PSM) detects Hall sensor pulses when M1 is switched off.

Possible Source

- Defective Hall sensor 1.
- Internal fault in the power seat module (PSM).

Fault symptom[s]

- Automatic seat operation does not function.

FAULTY SIGNAL. INTERMITTENT FAULT

CHECKING INPUT SIGNAL

When the seat is operated there should be a pulsed signal between pins according to the table.

DTC	Component	Terminal	Connector
PSM-003A	Hall sensor 1	#3, #4	E

PSM-003B	Hall sensor 2	#3, #4	D
PSM-003C	Hall sensor 3	#7, #8	E
PSM-003D	Hall sensor 4	#11, #12	E

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **OUTPUT SIGNALS TO THE MOTORS** .

Fig. 129: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 130: Identifying Voltage Display
Courtesy of VOLVO CARS CORPORATION

PSM-003A: HALL SENSOR 1. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

FAULTY SIGNAL. PERMANENT FAULT

CHECKING INPUT SIGNAL

Read off the value for Hall sensor 1.

The value should not change when the seat is not affected.

HINT: If the value counts up or down there may be a fault in the sensor, an intermittent short-circuit to supply voltage or an internal fault in the power seat module (PSM).

Remedy as necessary.

Other information:

- To access Hall sensor 1, see **FRONT-REAR ADJUSTMENT MOTOR**.
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

Fig. 131: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 132: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

FRONT-REAR ADJUSTMENT MOTOR

REPLACING THE FRONT-REAR ADJUSTMENT MOTOR

For first generation power seats, replace the front-rear adjustment motor. See or, see **ELECTRIC MOTOR FRONT-REAR ADJUSTMENT, REPLACING** (2005-).

For second generation power seats, replace the front-rear adjustment motor. See **ELECTRIC MOTOR FRONT-REAR ADJUSTMENT, REPLACING** (2005-).

PSM-003B: HALL SENSOR 2. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Motor 2 must be switched off before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-003B is stored if the power seat module (PSM) detects Hall sensor pulses when M2 is switched off.

Possible Source

- Defective Hall sensor 2.

Fault symptom[s]

- Automatic seat operation does not function.

FAULTY SIGNAL. INTERMITTENT FAULT

see **FAULTY SIGNAL. INTERMITTENT FAULT**

PSM-003B: HALL SENSOR 2. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

FAULTY SIGNAL. PERMANENT FAULT

CHECKING INPUT SIGNAL

Read off the value for Hall sensor 2.

The value should not change when the seat is not affected.

HINT: If the value counts up or down there may be a fault in the sensor, an intermittent short-circuit to supply voltage or an internal fault in the power seat module (PSM).

Remedy as necessary.

Other information:

- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

Fig. 133: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 134: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

PSM-003C: HALL SENSOR 3. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Motor 3 must be switched off before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-003C is stored if the power seat module (PSM) detects Hall sensor pulses when M3 is switched off.

Possible Source

- Defective Hall sensor 3.

Fault symptom[s]

- Automatic seat operation does not function.

FAULTY SIGNAL. INTERMITTENT FAULT

see **FAULTY SIGNAL. INTERMITTENT FAULT**

PSM-003C: HALL SENSOR 3. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

FAULTY SIGNAL. PERMANENT FAULT

CHECKING INPUT SIGNAL

Read off the value for Hall sensor 3.

The value should not change when the seat is not affected.

HINT: If the value counts up or down there may be a fault in the sensor, an intermittent short-circuit to supply voltage or an internal fault in the power seat module (PSM).

Remedy as necessary.

Other information:

- To access Hall sensor 2, see **HEIGHT ADJUSTMENT MOTOR, REAR**.
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

Fig. 136: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

HEIGHT ADJUSTMENT MOTOR, REAR

REPLACING THE MOTOR FOR REAR HEIGHT ADJUSTMENT

For first generation power seats, replace the rear height adjustment motor. See **REAR HEIGHT ADJUSTMENT MOTOR** (-2004) or **ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT, REPLACING** (2005-).

For second generation power seats, replace the rear height adjustment motor. See **HEIGHT ADJUSTMENT MOTOR, FRONT / REAR** (-2004) or **ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT, REPLACING** (2005-).

PSM-003D: HALL SENSOR 4. FAULTY SIGNAL. INTERMITTENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

Condition

Motor 4 must be switched off before the diagnostic trouble code (DTC) can be detected. Diagnostic trouble code (DTC) PSM-003D is stored if the power seat module (PSM) detects Hall sensor pulses when M4 is switched off.

Possible Source

- Defective Hall sensor 4.

Fault symptom[s]

- Automatic seat operation does not function.

FAULTY SIGNAL. INTERMITTENT FAULT

see **FAULTY SIGNAL. INTERMITTENT FAULT**

PSM-003D: HALL SENSOR 4. FAULTY SIGNAL. PERMANENT FAULT (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION

see **DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION**

FAULTY SIGNAL. PERMANENT FAULT

CHECKING INPUT SIGNAL

Read off the value for Hall sensor 4.

The value should not change when the seat is not affected.

HINT: If the value counts up or down there may be a fault in the sensor, an intermittent short-circuit to supply voltage or an internal fault in the power seat module (PSM).

Remedy as necessary.

Other information:

- To access Hall sensor 4, see **HEIGHT ADJUSTMENT MOTOR, FRONT**.
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .
- For information on signals, refer to **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

Fig. 137: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 138: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

HEIGHT ADJUSTMENT MOTOR, FRONT

REPLACING THE MOTOR FOR FRONT HEIGHT ADJUSTMENT

For first generation power seats, replace the height adjustment motor. See **THE MOTOR FOR FRONT HEIGHT ADJUSTMENT** (-2004) or **ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT, REPLACING** (2005-).

For second generation power seats, replace the front height adjustment motor. See **HEIGHT ADJUSTMENT MOTOR, FRONT/REAR** (-2004) or **ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT, REPLACING** (2005-).

PSM-E001: CONTROL MODULE COMMUNICATION. FAULTY COMMUNICATION (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION PSM-E001

Condition

Fig. 139: Brake Control Module
Courtesy of VOLVO CARS CORPORATION

The control modules transmit and receive information via a standardized serial communication method - CAN (Controller Area Network). The diagnostic trouble code (DTC) is stored if the control module registers serious interference (CAN communication blocked).

NOTE: In the event of system communication problems, it is not possible to communicate with the control module. Therefore it will only be possible to read off the fault if it is intermittent.

Substitute Value

- The control module shuts itself off ("bus-off")

  HINT: The control module will remain shut off until the power supply is broken (15, 30, X). When the power supply is connected the control module will make a new attempt to communicate.

Possible Source

- Short-circuit between Control area network (CAN) wiring
- Open-circuit in the control area network (CAN) wiring
- Internal fault in the control module

- Internal fault in another control module in the same part of the Control area network (CAN).

Fault symptom[s]

- Power seat with memory function does not operate at all
- Automatic seat/door mirror operation does not function.

FAULTY COMMUNICATION

see **FAULTY COMMUNICATION**

PSM-E003: CONFIGURATION FAULT. FAULTY CONFIGURATION (2003-12)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION PSM-E003

Condition

Fig. 140: Brake Control Module
Courtesy of VOLVO CARS CORPORATION

The control module compares its configuration ID with the signal configuration transmitted on the control area network (CAN) by the central electronic module (CEM). If the configuration IDs do not correspond the fault code is stored. The diagnostic trouble code (DTC) is also stored if the communication between the control

module and the central electronic module (CEM) is interrupted.

NOTE: **In the event of open-circuit in both the control area network (CAN) cables, it is not possible to communicate with the control module. Therefore it will only be possible to read off the diagnostic trouble code (DTC) if this type of fault is intermittent. When the diagnostic trouble code (DTC) is stored, the control module responds to the diagnostic command, however normal control area network (CAN) communication does not work. ("Expulsion mode")**

Substitute Value

- None.

Possible Source

- Faulty control area network (CAN) configuration ID. (The node is not intended for this car, for example a used control module with different software/hardware.)
- Open-circuit in the control area network (CAN) wiring between the control module and the central electrical module (CEM).

Fault symptom[s]

- Power seat with memory function does not operate at all
- Automatic seat/door mirror operation does not function.

FAULTY CONFIGURATION (2003)

see **FAULTY CONFIGURATION**

FAULTY CONFIGURATION (2004)

see **FAULTY CONFIGURATION**

FAULTY CONFIGURATION (2005-2012)

see **FAULTY CONFIGURATION**

PSM-XXXX: UNKNOWN DIAGNOSTIC TROUBLE CODE (DTC) FOR THE CURRENT CONTROL MODULE VERSION (2003-12)

UNKNOWN DIAGNOSTIC TROUBLE CODE (DTC) FOR THE CURRENT CONTROL MODULE VERSION

READING OFF DIAGNOSTIC TROUBLE CODES (DTCS)

Fig. 141: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition on.

  Read off the diagnostic trouble code (DTC) that is stored in the car.

  Make a note of the code. Report the code to VIDA customer support.

Is the value OK?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

CONNECTING THE BREAKOUT BOX

CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)

Special tools:

see **9511463**

see **9511428**

see **9511499**

see **9511507**

CONNECTING THE BREAKOUT BOX

- Ignition off
- Remove passenger compartment fuse 24 (11C/24) and passenger compartment fuse 4 (11C/4)
- Remove the power seat module (PSM).
  - See **POWER SEAT MODULE (PSM), REPLACING** (-2004) or **POWER SEAT MODULE (PSM), REPLACING** (2005-).
- Disconnect the module connectors.

There are two adapters for the power seat:

Connect adapter see **9511463** to control module connector C to take readings from the connector.

Connect adapter see **9511507** to control module connectors A, B, D and E. Connect breakout box see **9511428** and one or two cables see **9511499** to the adapters.

Disconnect the breakout box in reverse order.

For further information about signals and other values, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

CHILD CAR SAFETY (2003-2012)

BOOSTER CUSHION, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Remove:

- the battery lead. See **BATTERY, DISCONNECTING**
- the center seat from the car. See **REMOVING THE CENTER SEAT (SECOND ROW)**.

REMOVING BOOSTER CUSHIONS

Fig. 1: M6 Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 3 M6 screws.

Fold the booster cushion forward.

Fig. 2: Clips
Courtesy of VOLVO CARS CORPORATION

Remove the 4 clips.

INSTALLING BOOSTER CUSHIONS

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the booster cushion
- the 4 clips
- the 3 M6 screws. Tighten.

UPHOLSTERY BOOSTER CUSHION, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

Included in this method are methods for:

- the upholstery for the booster cushion. See **UPHOLSTERY BOOSTER CUSHION, REPLACING**
- the seat cushion upholstery for the rear booster cushion. See **UPHOLSTERY SEAT CUSHION BOOSTER CUSHION REAR, REPLACING**.

UPHOLSTERY BOOSTER CUSHION, REPLACING

REMOVING BOOSTER CUSHION UPHOLSTERY

Fig. 3: Booster Cushion Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the booster cushion. See **BOOSTER CUSHION, REPLACING**
- the 5 clips.

Fig. 4: Removing Upholstery Booster Cushion
Courtesy of VOLVO CARS CORPORATION

Release the opening handle.

Slide off the upholstery / cushion.

INSTALLING BOOSTER CUSHION UPHOLSTERY

Fig. 5: Installing Booster Cushion Upholstery
Courtesy of VOLVO CARS CORPORATION

Install the upholstery / cushion.

Fig. 6: Installing Upholstery
Courtesy of VOLVO CARS CORPORATION

Start sliding on the upholstery with the weatherstrip at the opening handle.

Continue with the upholstery over the metal tabs.

Install:

- the opening handle
- the 5 clips
- the booster cushion. See **BOOSTER CUSHION, REPLACING**.

UPHOLSTERY SEAT CUSHION BOOSTER CUSHION REAR, REPLACING

REMOVING THE SEAT CUSHION UPHOLSTERY FROM THE REAR BOOSTER CUSHION

Fig. 7: Booster Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the booster cushion. See **BOOSTER CUSHION, REPLACING**
- the 6 clips.

Fig. 8: Hooks
Courtesy of VOLVO CARS CORPORATION

- the 2 hooks.

Fig. 9: Weatherstrip
Courtesy of VOLVO CARS CORPORATION

Detach the weatherstrip at the rear edge of the seat cushion.

Remove:

- the upholstery / cushion from the seat frame
- the upholstery from the cushion.

INSTALLING THE SEAT CUSHION UPHOLSTERY FOR THE REAR BOOSTER CUSHION

Install:

- the upholstery for the cushion
- the upholstery / cushion on the seat frame
- the weatherstrip
- the 2 hooks
- the 6 clips
- the booster cushion. See **BOOSTER CUSHION, REPLACING**.

DOOR, SIDE, PARCEL SHELF, CARGO SHELF (2003-2012)

PANEL A-POST, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE A-POST PANEL

Fig. 10: Removing The A-Post Panel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the door weather strip
- the 2 covers and handles
- the 2 screws.

Pull the panel inwards into the car.

Lift the panel upwards.

INSTALLING THE A-POST PANEL

NOTE: **For tightening torques, see TIGHTENING TORQUE .**

Fig. 11: Installing The A-Post Panel
Courtesy of VOLVO CARS CORPORATION

Insert the A-post panel at the bottom edge.

Press the A-post panel into place.

Install:

- the 2 M5 screws. Tighten
- the 2 covers and the handles.

PANEL B-POST, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE B-POST PANEL

Fig. 12: Removing The B-Post Panel
Courtesy of VOLVO CARS CORPORATION

Move the seat as far forward as possible. Fold the backrest forward.

Remove:

- the door weather strip
- the end mounting. See **END MOUNTING, REPLACING**
- the panel. See **SILL TRIM PANEL, REPLACING** .

Pull the lower part of the B-post panel inwards into the car.

Pull straight downwards. Press the steel clips outwards on both sides. Release the insert at the top.

Lift upwards so that the panel releases from the air duct.

Remove the seat belt cover.

Thread the seat belt through the panel.

INSTALLING THE B-POST PANEL

Fig. 13: Installing The B-Post Panel
Courtesy of VOLVO CARS CORPORATION

Thread the seat belt through the panel.

Install the seat belt cover.

Press the panel into place against the lower section of the air duct.

Insert the insert at the top.

Press the panel into place.

Install:

- the steel clips at the top on both sides
- the end mounting. See **END MOUNTING, REPLACING**
- the panel. See **SILL TRIM PANEL, REPLACING**
- the door weather strip.

Check the function of the seat belt. See **SEAT BELT FUNCTION, CHECK** .

PANEL CANTRAIL, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE CANTRAIL PANEL

Fig. 14: Identifying Cantrail Panel And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 covers
- the 2 screws.

Pull the panel downwards and backwards.

Remove the bulb.

INSTALLING THE CANTRAIL PANEL

Install the lamp.

Insert the panel and press it into place.

Install:

- the 2 screws. Tighten
- the 2 covers.

PANEL C-POST, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE C-POST PANEL

Fig. 15: Removing C-Post Panel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the weatherstrip
- the panel
- the seat belt cover
- the end mounting. See **END MOUNTING, REPLACING** .

Pull the seat belt out through the panel.

Remove the panel by pulling it straight into the car.

Press the panel upwards so that the air duct releases.

INSTALLING THE C-POST PANEL

Fig. 16: Installing C-Post Panel
Courtesy of VOLVO CARS CORPORATION

Thread the seat belt through the panel.

Install:

- the end mounting. See **END MOUNTING, REPLACING**
- the seat belt cover.

Align the panel with the air duct.

Press the panel into place.

Install the weatherstrip.

PANEL D-POST, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE D-POST PANEL

Fig. 17: Removing D-Post Panel
Courtesy of VOLVO CARS CORPORATION

Remove the cantrail panel. See **PANEL CANTRAIL, REPLACING**.

Pull off the inner upper edge of the D post panel.

Pull the D post panel inwards into the car.

Remove:

- the connector (if there is a loudspeaker)
- the end mounting. See **END MOUNTING, REPLACING** (applies only to seven seater versions)
- the seat belt cover (applies only to seven seater versions).

Insert the seat belt through the D post panel (applies only to seven seater versions).

INSTALLING THE D-POST PANEL

Fig. 18: Installing D-Post Panel
Courtesy of VOLVO CARS CORPORATION

Insert the seat belt through the D post panel (applies only to seven seater versions).

Install:

- the seat belt cover (applies only to seven seater versions)
- the end mounting. See **END MOUNTING, REPLACING** (applies only to seven seater versions)
- the connector (if there is a loudspeaker).

Align the panel with the side upholstery in the cargo compartment (1).

Press the D-post panel into place starting at the top (2).

Install the cantrail panel. See **PANEL CANTRAIL, REPLACING**.

PANEL FRONT SIDE DOOR, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 19: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove the battery lead. See **BATTERY, DISCONNECTING** .

REMOVING THE PANEL FROM THE FRONT DOOR

Fig. 20: Removing Front Door Handle Using Weatherstrip Tool

Courtesy of VOLVO CARS CORPORATION

Remove the handle using a weatherstrip tool. Start from one side.

Remove:

- the cover at the base of the door mirror
- the 2 screws.

Pull off the panel.

Remove:

- the connectors
- the cable. See **CABLE, INTERNAL HANDLE, FRONT SIDE DOOR, REPLACING** .

Fig. 21: Identifying Front Door Panel And Screws
Courtesy of VOLVO CARS CORPORATION

TRANSFERRING COMPONENTS FOR EXTRA ARMREST (IF INSTALLED)

Fig. 22: Identifying Locations For Applying Marking Paint
Courtesy of VOLVO CARS CORPORATION

Apply marking paint to the spots indicated in the illustration.

Fig. 23: Identifying Armrest
Courtesy of VOLVO CARS CORPORATION

Guide the armrest into place and follow the door panel radius (see marking on illustration) without pressing the armrest against the door panel.

Once the armrest is in the correct position, press the armrest against the door panel to mark the holes.

Remove the armrest from the door panel.

Fig. 24: Identifying Marked Spots For Drilling
Courtesy of VOLVO CARS CORPORATION

Drill the marked spots using a 10 mm drill bit.

Fig. 25: Drilling Holes For Armrest Guides
Courtesy of VOLVO CARS CORPORATION

Drill the holes for the armrest guides. Use a 10 mm drill bit and drill at a 45 degree angle from the door panel.

Fig. 26: Finishing Holes With File
Courtesy of VOLVO CARS CORPORATION

Then continue working the holes with a file. Hole width should be 20 mm.

Test mount the armrest on the door panel. If necessary, use the file to make adjustments so that the armrest fits well against the door panel.

Install the armrest on the door panel with 4 flat washers (P/N 960 138) and 4 screws (P/N 979 187).

INSTALLING THE PANEL ON THE FRONT DOOR

NOTE: For tightening torques, see TIGHTENING TORQUE .

Fig. 27: Identifying Front Door Panel And Screws
Courtesy of VOLVO CARS CORPORATION

Install:

- the cable. See **CABLE, INTERNAL HANDLE, FRONT SIDE DOOR, REPLACING**
- the connectors.

Press the panel into place.

NOTE: **Align the panel so that the clips are in the correct position. The panel clips can be separated.**

Install:

- the 2 M6 screws. Tighten
- the cover at the base of the door mirror
- the handle.

Fig. 28: Pressing Front Edge Of Handle Into Position
Courtesy of VOLVO CARS CORPORATION

Press the front edge of the handle into position.

Fig. 29: Holding Handle In Position And Pressing In Both Sides
Courtesy of VOLVO CARS CORPORATION

Hold the handle in position and press in both sides.

PANEL REAR SIDE DOOR, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 30: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove the battery lead. See **BATTERY, DISCONNECTING** .

REMOVING THE REAR SIDE DOOR PANEL

Fig. 31: Removing Front Door Handle Using Weatherstrip Tool
Courtesy of VOLVO CARS CORPORATION

Remove the handle using a weatherstrip tool. Start from one side.

Remove the 2 screws

Pull off the panel.

Remove:

- the connectors
- the cable. See **CABLE, INTERNAL HANDLE, REAR SIDE DOOR, REPLACING** .

Fig. 32: Identifying Rear Side Door Panel And Screws
Courtesy of VOLVO CARS CORPORATION

INSTALLING THE REAR SIDE DOOR PANEL

NOTE: **For tightening torques, see TIGHTENING TORQUE .**

Fig. 33: Pressing Front Edge Of Handle Into Position
Courtesy of VOLVO CARS CORPORATION

Install:

- the cable. See **CABLE, INTERNAL HANDLE, REAR SIDE DOOR, REPLACING**
- the connectors.

Press the panel into place.

NOTE: Align the panel so that the clips are in the correct position. The panel clips can be separated.

Install:

- the 2 M6 screws. Tighten
- the handle.

Fig. 34: Holding Handle In Position And Pressing In Both Sides
Courtesy of VOLVO CARS CORPORATION

Hold the handle in position and press in both sides.

PANEL, TAILGATE, REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

Included in this method are methods for:

- the upper tailgate panel. See **PANEL TAILGATE UPPER, REPLACING**
- the lower tailgate panel. See **PANEL TAILGATE LOWER, REPLACING**.

PANEL TAILGATE UPPER, REPLACING

REMOVING THE UPPER TAILGATE PANEL

Fig. 35: Removing The Upper Tailgate Panel

Remove:

- the frame around the opening handle
- the lamp
- the 2 screws.

Pull off the panel.

INSTALLING THE UPPER TAILGATE PANEL

NOTE: For tightening torques, see TIGHTENING TORQUE .

Pull the cable harness through the panel.

Align and press the panel into place.

Install:

- the 2 M5 screws. Tighten
- the lamp

- the frame around the opening handle.

REMOVING THE WINDOW FRAME PANEL FROM THE UPPER TAILGATE

Fig. 36: Removing The Window Frame Panel From The Upper Tailgate
Courtesy of VOLVO CARS CORPORATION

Remove:

- the center panel
- the 2 side panels.

INSTALLING THE WINDOW FRAME PANEL IN THE UPPER TAILGATE

Fig. 37: Installing Window Frame Panel In The Upper Tailgate

Install:

- the 2 side panels
- the center panel.

PANEL TAILGATE LOWER, REPLACING

REMOVING THE LOWER TAILGATE PANEL

Lift up the spring-loaded panel.

Fig. 38: Removing Tailgate Panel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 3 screws
- the panel.

INSTALLING THE LOWER TAILGATE PANEL

Install:

- the panel
- the 3 screws. Tighten.

REMOVING THE UPPER PANEL FROM THE LOWER TAILGATE

Fig. 39: Removing The Upper Panel From The Lower Tailgate
Courtesy of VOLVO CARS CORPORATION

Remove:

- the panel. See **REMOVING THE LOWER TAILGATE PANEL**
- the 2 outer covers
- the 6 screws
- the panel.

INSTALLING THE UPPER PANEL IN THE LOWER TAILGATE

Install:

- the panel
- the 6 screws. Tighten
- the 2 outer covers
- the panel. See **INSTALLING THE LOWER TAILGATE PANEL**.

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE SEAT CUSHION UPHOLSTERY

Fig. 40: 5 Half Moon Clips From Each Side Of Underside Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See **REMOVING THE FRONT SEAT**
- five half moon clips each side of the lower edge of the cushion.

Fig. 41: 4 Half Moon Clips From Underside Cushion
Courtesy of VOLVO CARS CORPORATION

- four half moon clips from the front edge of the seat cushion.

Fig. 42: 3 Half Moon Clips From Rear Edge Of Underside
Courtesy of VOLVO CARS CORPORATION

- the half moon clips from the underneath of the rear edge.

Fig. 43: Identifying Half Moon Clips On Sides And At Rib
Courtesy of VOLVO CARS CORPORATION

- one half moon clip from each side. The bottom of the half moon clip is in the spring.

Fig. 44: Folding Up Upholstery
Courtesy of VOLVO CARS CORPORATION

Fold up the upholstery.

Fig. 45: Identifying Half Moon Clips From Each Front-Rear Channel
Courtesy of VOLVO CARS CORPORATION

Remove:

- three half moon clips from each front-rear channel
- two half moon clips per front-rear channel.

Replace the upholstery.

INSTALLING SEAT CUSHION UPHOLSTERY

NOTE: Accurately measure and mount the upholstery before securing it.

Install:

- two half moon clips per front-rear channel
- three half moon clips on each front-rear channel.

Pull the upholstery down.

Install:

- one half moon clip underneath each side
- the half moon clips on the underneath of the rear edge
- four half moon clips in the front edge of the seat cushion
- five half moon clips underneath each side of the cushion
- the front seat. See **INSTALLING THE FRONT SEAT**.

FRONT SEAT, DRIVER'S SEAT (2004)

CONTROL MODULE HEATER PAD, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE HEATER PAD CONTROL MODULE

Fig. 46: Heater Pad Control Module
Courtesy of VOLVO CARS CORPORATION

Remove:

- the seat. See **REMOVING THE FRONT SEAT**
- 1 screw
- the connector
- the control module.

INSTALLING THE HEATER PAD CONTROL MODULE

Install:

- the control module
- the connector
- 1 screw. Tighten
- the seat. See **INSTALLING THE FRONT SEAT**.

ELECTRIC MOTOR BACKREST CUSHION, REPLACING

Special tools:

see **1158962**

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 47: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove the battery lead. See **BATTERY, DISCONNECTING** .

REMOVING THE ELECTRIC MOTOR FOR THE BACKREST CUSHION

Fig. 48: Five Half Moon Clips At Bottom Edge Of Backrest
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See **REMOVING THE FRONT SEAT**
- the 5 half moon clips.

Fig. 49: Identifying Two Half Moon Clips On Each Front-Rear Channel
Courtesy of VOLVO CARS CORPORATION

- the 4 half moon clips.

Remove the upholstery up to the first lateral channel. There are two half moon clips on each front-rear channel.

Pull up the upholstery on the backrest cushion.

Be careful with the plastic frame.

Fig. 50: Identifying Screw For Shaft And Nut For Electric Motor
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 1 screw for the shaft
- the 1 nut for the electric motor.

Pull out the shaft so that the electric motor is released.

Fig. 51: Identifying Spring Between Cushion And Electric Motor
Courtesy of VOLVO CARS CORPORATION

Remove:

- the spring between the cushion and the electric motor
- the 3 tie straps
- the connector under the seat.

HINT: Note the routing of the wiring to make it easier to reinstall.

INSTALL THE ELECTRIC MOTOR FOR THE BACKREST CUSHION

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the electric motor. Press the shaft through the motor to secure it
- the 1 M6 screw for the electric motor. Tighten
- the 1 M6 screw for the shaft. Tighten
- the spring.

Route the wiring.

Connect the connector.

Pull down upholstery.

Install:

- the 4 half moon clips. Use special tool see **1158962**
- the 3 tie straps
- the 5 half moon clips. Use special tool see **1158962**
- the front seat. See **INSTALLING THE FRONT SEAT**.

ELECTRIC MOTOR CUSHION, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 52: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery lead. See **BATTERY, DISCONNECTING**
- the front seat. See **REMOVING THE FRONT SEAT**.

HINT: Use the seat tilt mechanism and fold the backrest all the way forward. Then turn the seat upside down to make it easier to access the electric motor.

Included in this method are methods for:

- the rear electric motor. See **REAR ELECTRIC MOTOR CUSHION, REPLACING**
- the front electric motor. See **FRONT ELECTRIC MOTOR CUSHION, REPLACING**.

REAR ELECTRIC MOTOR CUSHION, REPLACING

REMOVING THE REAR ELECTRIC MOTOR FOR THE SEAT CUSHION

Fig. 53: Front Height Adjustment Motor
Courtesy of VOLVO CARS CORPORATION

Remove:

- the connector
- the 2 screws
- the electric motor. Carefully pull it straight out.

INSTALLING THE REAR ELECTRIC MOTOR FOR THE SEAT CUSHION

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install the electric motor.

NOTE: Do not damage the shaft.

Install:

- the 2 M5 screws. Tighten
- the connector
- the front seat. See **INSTALLING THE FRONT SEAT**
- the battery lead. See **BATTERY, DISCONNECTING** .

FRONT ELECTRIC MOTOR CUSHION, REPLACING

REMOVING THE FRONT ELECTRIC MOTOR FOR THE SEAT CUSHION

Fig. 54: Removing The Front Electric Motor For The Seat Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 6 connectors
- the 1 screw for the connection bracket.

Remove the plastic clip around the electric motor.

Remove the plastic plate by the electric motor.

NOTE: The plastic plate is firmly positioned so considerable force is required to

remove it.

HINT: Grasp the center of the plastic plate and pull it straight out of the seat so that it bends. Then work out the plate.

Fig. 55: Identifying Electric Motor Location
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 screws
- the electric motor. Pull it carefully straight out.

INSTALLING THE FRONT ELECTRIC MOTOR FOR THE SEAT CUSHION

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install the electric motor.

NOTE: Do not damage the shaft.

Install:

- the 2 M5 screws
- the plastic plate.

HINT: Start by guiding in the hook at the seat rail.

NOTE: Considerable force is required to bend the plastic plate into position.

Install:

- the 6 connectors
- the screw for the connection bracket.

NOTE: Ensure that all the connectors are intact and correctly connected.

Install:

- the front seat. See **INSTALLING THE FRONT SEAT**
- the battery lead. See **BATTERY, DISCONNECTING** .

HEATER PAD BACKREST AND CUSHION, REPLACING

Special tools:

see **1158962**

REPLACING

The illustrations in this service information are used for different model years and / or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Remove the seat. See **REMOVING THE FRONT SEAT**.

NOTE: The old heating pad must be removed before a new one is installed. A new heater pad must not be bonded over the old pad.

NOTE: Read through the entire method before beginning work.

Fig. 56: Different Types Of Heater Pads (1 Of 8)
Courtesy of VOLVO CARS CORPORATION

The following heater pad versions are available:

- heater pad and seat belt reminder
- heater pad only
- seat belt reminder only.

REMOVING THE HEATER PAD FROM THE BACKREST AND CUSHION

REMOVING UPHOLSTERY

Remove the upholstery. See **UPHOLSTERY SEAT CUSHION, REPLACING** or **UPHOLSTERY BACK REST, REPLACING** (2003) or **UPHOLSTERY SEAT CUSHION, REPLACING** (2004-).

NOTE: Cut off the half moon clips and remove any remaining parts of the clips.

NOTE: Do not bend the upholstery rods more than is necessary to detach the upholstery. Straighten the rods before reinstalling the upholstery.

REMOVING OLD HEATER PADS

Fig. 57: Heating Heater Pad
Courtesy of VOLVO CARS CORPORATION

Carefully heat the old heater pad to remove it.

Fig. 58: Damaging Foam Filling
Courtesy of VOLVO CARS CORPORATION

NOTE: **Ensure that the foam filling is not damaged when removing the heater pad. Ensure that the pad is detached from the foam filling. This is to prevent functionality problems when the new heater pad is installed.**

NOTE: **Damaged foam filling must be replaced. This to guarantee function. This also applies if there are cracks in the backrest or seat frame.**

INSTALLING THE HEATER PAD ON THE BACKREST AND CUSHION

INSTALLING NEW HEATER PADS

Fig. 59: Identifying Heater Pad Position
Courtesy of VOLVO CARS CORPORATION

NOTE: **The heater pad must be correctly positioned so that the when the half moon clips are secured they are not too close to the heating loops or the surface of the heater pad.**

Position the heater pad in the correct position. Do not remove the backing from the adhesive surfaces.

Secure one half of the heater pad. Fold up the other half.

Pull the backing (or part of the backing) off the adhesive surface closest to the center of the section of the heater pad that is bent up.

Carefully bring the adhesive surface down onto the foam filling. Work with small sections at a time. Start from the center and work out towards the edges.

Continue in the same way with the other adhesive surfaces.

Fig. 60: End Of The Pad Not Up On Flat Surface
Courtesy of VOLVO CARS CORPORATION

If the heater pad terminates at the channel, position it as illustrated.

NOTE: The end of the pad must not be up on the flat surface.

Fig. 61: Identifying Proper Pad Fill Position
Courtesy of VOLVO CARS CORPORATION

If the heater pad is the type where the pad and/or cable is placed in the channel, the pad must follow the foam filling as illustrated. If not, the pad and/or cable may be loaded and damage the pad. The type of seam on the upholstery may cause wear in the long term.

Fig. 62: Bubbles And Kinks Increase Risk Of Damage To Pad
Courtesy of VOLVO CARS CORPORATION

NOTE: **There must not be any bubbles or kinks when the heater pad is bonded to the foam filling. This increases the risk of damage to the pad during use. This applies to the entire surface, but to the heating wires in particular.**

Fig. 63: Locating Positional Straps To Be Cut Apart
Courtesy of VOLVO CARS CORPORATION

When the heater pad has been bonded into place the positional straps (shaded in the illustration) must be cut apart. This only applies to those types of heater pads that have positional straps.

NOTE: The positional straps must not be cut before bonding is complete.

INSTALLING UPHOLSTERY

Before securing the upholstery, check the following:

- that any remnants of the half moon clips have been removed
- that the rods (steel or plastic wire in the pockets inside the upholstery) are in position and not protruding outside the pleats
- that the rods or the rod pleats are not bent or in contact with the heater pad. Adjust if necessary
- that the seam and the rods and pleats are positioned in the channel so that they are not in contact with the heater pad
- that the plastic wires are the correct length and cannot affect the function of the heater pad.

Fig. 64: Identifying Installed Upholstery
Courtesy of VOLVO CARS CORPORATION

Install the upholstery. See **UPHOLSTERY SEAT CUSHION, REPLACING** or **UPHOLSTERY BACK REST, REPLACING** (2003) or **UPHOLSTERY SEAT CUSHION, REPLACING** (2004-).

Fig. 65: Identifying Tested Bonding
Courtesy of VOLVO CARS CORPORATION

Testing the bonding

This test can be performed either with the upholstery completely removed or with it partially in position.

Press at those points illustrated. Check that the heater pad follows the compression of the cushion.

There must be no kinks or other defects in the heater pad when it is pressed.

Function test:

Start the seat heater and check the function.

NOTE: This test is not possible if the ambient temperature is too high.

Install the seat. See **INSTALLING THE FRONT SEAT**.

LUMBAR SUPPORT BACKREST CUSHION, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 66: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery lead. See **BATTERY, DISCONNECTING**
- the front seat. See **REMOVING THE FRONT SEAT**.

REMOVING LUMBAR SUPPORT FROM THE BACKREST CUSHION

Fig. 67: Identifying Backrest Mounting Screws And Hooks
Courtesy of VOLVO CARS CORPORATION

Remove:

- the backrest cushion upholstery. See **REMOVING BACKREST CUSHION UPHOLSTERY**
- the lumbar support knob.

Slacken off the tension in lumbar support.

Carefully remove the cover.

Pull the lumbar support knob straight out.

Remove:

- the 2 mounting screws on the side of the backrest
- the 6 hooks on both sides.

Detach the 2 mechanical cables on both sides.

Remove the lumbar support.

INSTALLING THE LUMBAR SUPPORT IN THE BACKREST CUSHION

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the lumbar support
- the 2 mechanical cables on both sides
- the 6 hooks on both sides
- the 2 mounting screws. Tighten
- the backrest cushion upholstery. See **INSTALLING BACKREST CUSHION UPHOLSTERY**
- the lumbar support knob
- the cover.

Tension the lumbar support.

Install:

- the front seat. See **INSTALLING THE FRONT SEAT**
- the battery lead. See **BATTERY, DISCONNECTING** .

POWER SEAT MODULE (PSM), REPLACING

REMOVING THE POWER SEAT MODULE (PSM)

Raise the seat to its highest position.

Fig. 68: Identifying Ignition In Off Position
Courtesy of VOLVO CARS CORPORATION

Remove the seat from the car. See **REMOVING THE FRONT SEAT**.

Fig. 69: Identifying Ignition Key Off
Courtesy of VOLVO CARS CORPORATION

Remove the key. The key must be removed to ensure that the ignition is not switched on by mistake.

Wait one minute before starting work.

Remove the 2 screws.

Disconnect the connector.

Remove the control module.

INSTALLING THE POWER SEAT MODULE (PSM)

Install:

- the control module
- the connector
- the 2 screws. Tighten
- the key
- the front seat. See **INSTALLING THE FRONT SEAT**.

ORDERING SOFTWARE

Order the software. See 9438271 .

FINISHING

Check that no diagnostic trouble codes have been stored during the repair.

Test operate the seat. Check all the functions.

SEAT RAILS, REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

SEAT RAIL MANUAL SEAT, REPLACING

REMOVING SEAT RAILS FOR MANUAL SEATS

Fig. 70: 4 Half Moon Clips From Underside Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See **REMOVING THE FRONT SEAT**

- the seat belt buckle. See **BUCKLE SEAT BELT FRONT, REPLACING**
- the connectors and wiring harness from the cross stay.

Fig. 71: Identifying Nut And Washers For Rear Height Adjuster Mounting
Courtesy of VOLVO CARS CORPORATION

- the 2 screwed joints from the cross stay.

Fig. 72: Identifying Nut For Front Height Adjuster Mounting
Courtesy of VOLVO CARS CORPORATION

- 1 screw from the front mounting.

Fig. 73: 5 Half Moon Clips From Each Side Of Underside Cushion
Courtesy of VOLVO CARS CORPORATION

- the outer nut.

Pull straight out.

Angle the rail and the seat base so that they come apart.

INSTALLING SEAT RAILS FOR MANUAL SEATS

For tightening torques, see **GENERAL TIGHTENING TORQUE** .

Install:

- a new seat rail
- the outer M8 nut, x 1. Tighten
- 1 M8 screw for the front mounting for the height adjuster. Tighten
- the 2 M8 screwed joints. Tighten.

SEAT RAIL POWER SEAT, REPLACING

REMOVING THE SEAT RAILS FOR POWER SEATS

Fig. 74: 4 Half Moon Clips From Underside Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See **REMOVING THE FRONT SEAT**
- the seat belt buckle. See **BUCKLE SEAT BELT FRONT, REPLACING**
- the connectors and wiring harness from the cross stay.

Fig. 75: Identifying Stud Screws And Height Adjustment Motor Screws
Courtesy of VOLVO CARS CORPORATION

- the 2 stud screws (A) and (B)
- the seat rail.

ASSEMBLING COMPONENTS

Fig. 76: Identifying Seat Rail
Courtesy of VOLVO CARS CORPORATION

HINT: When replacing the seat rail or power seat gear, it is easier to assemble the following components so that they form a single unit before they are reinstalled on the front seat.

Remove:

- the seat rail
- the spacer plate
- the gear
- the motors.

Fig. 77: Identifying Stud Screws And Height Adjustment Motor Screws
Courtesy of VOLVO CARS CORPORATION

Pull up the height adjustment levers to the highest position.

Align the seat rail assembly.

Check that the screws (C) are all the way in their channels.

Check that screw holes (A) are aligned so that the stud screws go in easily.

Tighten:

- the screwed joint (A) halfway
- the screwed joint (B)
- the screwed joint (A) completely.

INSTALLING THE SEAT RAILS FOR POWER SEATS

Install:

- a new or adjusted seat rail
- the 2 M6 stud screws. Tighten
- the connectors and wiring harness from the cross stay
- the front seat. See **INSTALLING THE FRONT SEAT**.

SIDE PANEL, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

SIDE PANEL MANUAL SEAT, REPLACING

REMOVING THE SIDE PANEL FROM MANUAL SEATS

Fig. 78: Identifying Screwdriver Inserted At Rear Of Handle
Courtesy of VOLVO CARS CORPORATION

Remove the two handles for the height adjustment levers.

Insert a screwdriver at the rear of the handle.

Release the catches.

Pull upwards.

Fig. 79: Identifying Front Edge Of Panel Pulled Upwards And Backwards
Courtesy of VOLVO CARS CORPORATION

Pull the front edge of the panel upwards.

Pull the panel backwards.

INSTALLING THE SIDE PANEL ON MANUAL SEATS

Install:

- the panel
- the handles on the height adjustment levers.

SIDE PANEL POWER SEAT, REPLACING

REMOVING THE SIDE PANEL FROM POWER SEATS

Fig. 80: Identifying Front Edge Of Side Panel Lifted And Pulled Backwards
Courtesy of VOLVO CARS CORPORATION

Remove:

- the two tie straps under the seat
- the connector.

Pull the front edge of the panel upwards.

Pull the panel backwards.

INSTALLING THE SIDE PANEL ON POWER SEATS

Install:

- the panel
- the connector
- new tie straps.

UPHOLSTERY BACK REST, REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

REPLACING

REMOVING THE FRONT SEAT

Fig. 81: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove the battery lead. See **BATTERY, DISCONNECTING** .

Fig. 82: Locating Seat Side Pieces And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the four side pieces over the screws for the seat. Pull the front side pieces straight forward and the rear side pieces backwards and upwards to detach them
- four screws.

- the side panel. See **SIDE PANEL, REPLACING**
- the seat belt from the seat
- the connector.

Disconnect any remaining connectors.

Remove the seat.

To prevent electric static discharge problems:

When removing a seat with a SIPS (side impact protection system) module from a car, the seat must be grounded. This is due to the danger of static electricity.

Detach the chair from its screwed joint. Do **not** lift the seat out of the car yet.

Strip a long cable at both ends. Secure one end to the rear mounting on the chair. Secure the other end in the car or in the car hoist.

REMOVING BACKREST CUSHION UPHOLSTERY

Remove the lumbar support knob.

Slacken off the tension in lumbar support.

Carefully remove the cover.

Pull the lumbar support knob straight out.

Remove the backrest adjustment knob (manual seats only). Pull the knob straight out.

Fold the backrest or position the backrest in the forward angled position.

Fig. 83: Five Half Moon Clips At Bottom Edge Of Backrest

Courtesy of VOLVO CARS CORPORATION

Remove the five half moon clips at the bottom edge of the backrest.

Remove the upholstery from the seat up to the first lateral channel. There are two half moon clips on each front-rear channel.

Remove the upholstery completely.

Fig. 84: Half Moon Clips In First Lateral Channel & Upper Channel
Courtesy of VOLVO CARS CORPORATION

Remove:

- one half moon clip from each front-rear channel
- three half moon clips in the first lateral channel
- two half moon clips in the upper channel.

Fig. 85: Identifying Spring
Courtesy of VOLVO CARS CORPORATION

Release the two elastic attachments in the inside / reverse of the backrest.

Fig. 86: Identifying Three Half Moon Clips From Inside Of Reverse Of Backrest
Courtesy of VOLVO CARS CORPORATION

Remove the three half moon clips from the inside of the reverse of the backrest.

Pull off all the upholstery.

INSTALLING

INSTALLING BACKREST CUSHION UPHOLSTERY

NOTE: For tightening torques, see GENERAL TIGHTENING TORQUE .

Install:

- the upholstery on the backrest
- the three half moon clips on the inside of the reverse of the backrest
- the two elastic attachments in the inside of the reverse of the backrest
- one half moon clip in each side of the front-rear channels.

Install the upholstery up to the first lateral channel. There must be two half moon clips per each front-rear channel.

Install the upholstery all the way down.

Install five half moon clips at the bottom edge of the backrest.

Fold the backrest to the normal position.

Install:

- the backrest adjustment knob. Push the knob straight in
- the lumbar support knob
- the cover.

Tension the lumbar support.

INSTALLING THE FRONT SEAT

Install:

- the seat in the car
- the connector
- the seat belt
- the side panel. See **SIDE PANEL, REPLACING**
- any remaining connectors
- the 4 M10 screws. Tighten.

Remove the ground lead (if applicable).

Install:

- the four side pieces on the seat
- the battery lead. See **BATTERY, DISCONNECTING** .

UPHOLSTERY SEAT CUSHION, REPLACING

Special tools:

see **1158962**

NOTE: **The illustrations in this service information are used for different model years and / or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

Remove:

- the battery lead. See **BATTERY, DISCONNECTING**
- the front seat. See **REMOVING THE FRONT SEAT**.

REMOVING THE SEAT CUSHION UPHOLSTERY

Fig. 87: Half Moon Clips From Lower Edge Of Seat Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the half moon clips, 5 per side, from the lower edge of the seat cushion.

Fig. 88: Half Moon Clips From Front Edge Of Seat Cushion
Courtesy of VOLVO CARS CORPORATION

- the half moon clips, 4 per side, from the front edge of the seat cushion.

Fig. 89: Identifying Tie Straps Around Cable Harness
Courtesy of VOLVO CARS CORPORATION

- all the connectors
- the tie straps around the cable harness.

Thread each connector individually through the hole in the seat cushion upholstery.

Fig. 90: Half Moon Clips From Underside Of Rear Edge
Courtesy of VOLVO CARS CORPORATION

Remove:

- the half moon clips, 4, from the underside of the rear edge.

Fig. 91: Bottoms Of Half Moon Clips Are Located In Spring
Courtesy of VOLVO CARS CORPORATION

- the half moon clips, 1 on each side. The bottoms of the half moon clips are located in the spring.

Fig. 92: Folding Up Upholstery
Courtesy of VOLVO CARS CORPORATION

Fold up the upholstery.

Fig. 93: Half Moon Clips On Each Front-Rear Channel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the half moon clips, 3 on each front-rear channel.

Fig. 94: Half Moon Clips On Each Lateral Channel
Courtesy of VOLVO CARS CORPORATION

- the half moon clips, 2 on each lateral channel.

Replace the upholstery.

INSTALLING SEAT CUSHION UPHOLSTERY

Fig. 95: Identifying Hole Cut In New Upholstery For Cable Harness
Courtesy of VOLVO CARS CORPORATION

NOTE: **A new hole for the cable harness must be cut in the new upholstery. Use the old upholstery as a template.**

Accurately measure and position the upholstery before securing it.

Fig. 96: Half Moon Clips On Each Lateral Channel
Courtesy of VOLVO CARS CORPORATION

Install:

- the half moon clips, 2 on each lateral channel. Use special tool see **1158962** .

Fig. 97: Half Moon Clips On Each Front-Rear Channel
Courtesy of VOLVO CARS CORPORATION

- the half moon clips, 3 on each front-rear channel.

Pull the upholstery down.

Fig. 98: Identifying Tie Straps Around Cable Harness
Courtesy of VOLVO CARS CORPORATION

Install:

- the half moon clips, 1 on each side, on the underside
- the half moon clips, 4 at the front edge of the seat cushion.

Thread the connectors through the hole in the upholstery.

Secure the connectors.

Secure the cable harness using tie straps.

Fig. 99: Half Moon Clips On Underside Of Rear Edge
Courtesy of VOLVO CARS CORPORATION

NOTE: Note how the clip is located and how the wiring is routed.

Install:

- the half moon clips, 4, on the underside of the rear edge
- the half moon clips, 5 on each side, in the lower edge of the seat cushion.

FINISHING

Install the front seat. See **INSTALLING THE FRONT SEAT**.

WHIPLASH UNIT, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 100: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove the battery lead. See **BATTERY, DISCONNECTING** .

REMOVING THE WHIPLASH UNIT

Fig. 101: Identifying Lumbar Support Adjustment Knob Components
Courtesy of VOLVO CARS CORPORATION

Remove the front seat. See **REMOVING THE FRONT SEAT**.

Fold the backrest forwards. Use the adjustment mechanism (C).

Remove the 5 half moon clips at the lower edge of the backrest cushion

Remove the spring (D) at the rear edge of the seat.

WARNING: Be careful when detaching the spring.

HINT: Use a pipe wrench or similar when detaching the spring so that it does not damage the upholstery or fingers.

Remove:

- the screw (E), 1 per side
- the nut (B), 1 per side.

Fig. 102: Deformation Element, Plastic Washers And O-Ring
Courtesy of VOLVO CARS CORPORATION

Pull apart the backrest and seat cushion so that the whiplash element is released.

Remove the whiplash element by twisting it and angling it out.

NOTE: The whiplash unit can only be removed from a particular position.

HINT: Note the position of the friction washers before disassembly.

Remove:

- the deformation element (F) and the 2 friction washers
- the O-ring (A).

Replace the whiplash unit.

INSTALLING THE WHIPLASH UNIT

Install:

- a new whiplash unit
- new plastic washers if the old ones are damaged.

NOTE: The plastic washers must be positioned correctly.

Install:

- a new O-ring if the old one is damaged
- the screws and nuts, 1 screwed joint per side. Tighten. See **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the spring.

HINT: Stand behind the seat with the backrest cushion completely folded forward. Grasp the rear end of the spring using a pipe wrench and pull the spring into position.

NOTE: The end of the spring must be greased to stop it from making noise.

Check that the indicator is intact and that the whiplash unit is correctly positioned.

Install:

- the front seat. See **INSTALLING THE FRONT SEAT**
- the battery lead. See **BATTERY, DISCONNECTING** .

FRONT SEAT, DRIVER'S SEAT (2005-2012)

COLLISION PROTECTION UNIT FROM BEHIND FRONT SEAT (2007-2012)

REMOVING

NOTE: Removal steps in this procedure may contain installation details.

Only applies to vehicle with fixed backrest.

Remove the front seat according to: **FRONT SEAT, REPLACING**.

Fig. 103: Accessing Collision Protection Unit From Behind Front Seat (1 Of 24)
Courtesy of VOLVO CARS CORPORATION

CAUTION: The operation must be performed on both sides of the seat.

INSTALLATION

To install, reverse the removal procedure

ELECTRIC MOTOR BACKREST CUSHION, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE ELECTRIC MOTOR FOR THE BACKREST CUSHION

Remove the front seat. See: **FRONT SEAT, REPLACING**.

Detach and pull up the upholstery. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**.

Fig. 127: Locating Protective Pad Clips
Courtesy of VOLVO CARS CORPORATION

Remove the black protective pad from the reverse of the backrest cushion. It is secured by 4 clips.

Fig. 128: Foam Rubber Cushion Half Moon Clips
Courtesy of VOLVO CARS CORPORATION

Cut off the 4 x half moon clips on the foam rubber cushion. Fold the cushion to one side.

Fig. 129: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove:

- the M6 nut on the side where the electric motor is located. Pull out the shaft
- the screw for the electric motor
- the connector by pushing it backwards.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALL THE ELECTRIC MOTOR

Insert the shaft and hang the motor on it.

Install:

- the connector
- the screw
- 1 x M6 nut

- the backrest cushion
- the 4 x half moon clips
- the protective pad
- the upholstery. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**
- the front seat. See: **FRONT SEAT, REPLACING**.

ELECTRIC MOTOR CUSHION, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

INFORMATION

METHOD CONTENT

This method consists of:

- see **ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT, REPLACING**
- see **ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT, REPLACING**
- see **ELECTRIC MOTOR FRONT-REAR ADJUSTMENT, REPLACING**.

ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT, REPLACING

REMOVING THE ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT

Fig. 130: Identifying M6 & M8 Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See: **FRONT SEAT, REPLACING**
- the 1 M6 screws (2)
- the M8 screw (2).

Fig. 131: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove the connector by sliding it to one side.

INSTALLING THE ELECTRIC MOTOR FRONT HEIGHT ADJUSTMENT

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Install:

- the connector
- the electric motor
- the 2 M6 screws
- the 1 M8 screw
- the front seat. See: **FRONT SEAT, REPLACING**.

ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT, REPLACING

REMOVING THE ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT

Fig. 132: Electric Motor Rear Height Adjustment
Courtesy of VOLVO CARS CORPORATION

Raise the seat to the uppermost position.

Remove:

- the side panel. See: **SIDE PANEL FRONT SEAT, REPLACING**
- the tie strap (2)
- the 3 screws (1).

Fig. 133: Identifying M6 Screw & Electric Motor
Courtesy of VOLVO CARS CORPORATION

- the 1 M6 screw
- the electric motor.

Fig. 134: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove the connector by sliding it to one side.

INSTALLING THE ELECTRIC MOTOR REAR HEIGHT ADJUSTMENT

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Install:

- the connector
- the electric motor
- the 3 M6 screws
- the 1 M6 screw
- the tie strap
- the side panel. See: **SIDE PANEL FRONT SEAT, REPLACING**.

ELECTRIC MOTOR FRONT-REAR ADJUSTMENT, REPLACING

REMOVING ELECTRIC MOTOR FRONT-REAR ADJUSTMENT

Fig. 135: Electric Motor And Mechanical Cables
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See: **FRONT SEAT, REPLACING**
- the 2 M5 screws
- the electric motor and the mechanical cables.

Fig. 136: Identifying Connector Removal
Courtesy of VOLVO CARS CORPORATION

Remove the connector by sliding it straight backwards.

INSTALLING THE ELECTRIC MOTOR FRONT-REAR ADJUSTMENT

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Fig. 137: Securing Short Mechanical Cable In A Power Screwdriver And Screw Until Rails Are Equal
Courtesy of VOLVO CARS CORPORATION

HINT: If the distance between the two rails differs, secure the short mechanical cable in a power screwdriver and screw until the rails are equal.

Install:

- the connector
- the electric motor and the mechanical cables
- the 2 M5 screws
- the front seat. See: **FRONT SEAT, REPLACING**.

ELECTRIC MOTOR, BACKREST RAKE (2009-2012)

Operation Number(s):

REMOVING

NOTE: Removal steps in this procedure may contain installation details.

Remove the backrest padding. See **UPHOLSTERY BACK REST, REPLACING (2009-2012)**

Fig. 138: Back Motor
Courtesy of VOLVO CARS CORPORATION

INSTALLING

To install, reverse the removal procedure.

FRONT SEAT, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

IGNITION OFF

Fig. 139: Identifying Ignition In OFF Position
Courtesy of VOLVO CARS CORPORATION

Ignition off.

REMOVAL

REMOVING THE FRONT SEAT

Fig. 140: Front Seat Side Panel & Front Screws For Seat
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 panels located above the front screws for the seat
- the 4 x M10 screws
- the front seat side panel. See: **SIDE PANEL FRONT SEAT, REPLACING**
- the end mounting. See: **END MOUNTING FRONT, REPLACING**
- the screw. Remove the connector under the seat.

Lift out the seat.

CAUTION: Two people are required for this procedure to prevent damage to the interior trim or the seat.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE FRONT SEAT

Install the seat.

CAUTION: Two people are required for this procedure to prevent damage to the interior trim or the seat.

Install:

- the connector using the screw
- the 4 x M10 screws
- the 2 panels
- the end mounting. See: **END MOUNTING FRONT, REPLACING**
- the side panel. See: **SIDE PANEL FRONT SEAT, REPLACING**.

HEATER PAD BACKREST AND CUSHION, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

REMOVING THE FRONT SEAT AND IMPORTANT INFORMATION

Remove the front seat. See: **FRONT SEAT, REPLACING**.

CAUTION: Remove the old heater pad before installing the new one. A new heater pad must not be bonded over the old pad.

NOTE: Read through the entire method before beginning work.

Fig. 141: Different Types Of Heater Pads (1 Of 8)
Courtesy of VOLVO CARS CORPORATION

The following heater pad versions are available:

- heater pad and seat belt reminder
- heater pad only
- seat belt reminder only.

REMOVAL

REMOVING UPHOLSTERY

Remove:

- the seat cushion upholstery. See: **UPHOLSTERY SEAT CUSHION, REPLACING**
- the backrest cushion upholstery. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**.

NOTE: Cut the half moon clips. Remove any remaining parts of the clips.

NOTE: Do not bend the upholstery rods more than is necessary to detach the upholstery. Straighten the rods before reinstalling the upholstery.

REMOVING HEATER PAD

Fig. 142: Heating Heater Pad
Courtesy of VOLVO CARS CORPORATION

Carefully heat the heater pad to remove it.

Fig. 143: Damaging Foam Filling
Courtesy of VOLVO CARS CORPORATION

NOTE: **Ensure that the foam filling is not damaged when removing the heater pad. Ensure that the pad is detached from the foam filling. This is to prevent functionality problems when the new heater pad is installed.**

NOTE: **Damaged foam filling must be replaced. This to guarantee function. This also applies if there are cracks in the backrest or seat frame.**

INSTALLATION

INSTALLING HEATER PADS

Fig. 144: Identifying Heater Pad Position
Courtesy of VOLVO CARS CORPORATION

CAUTION: The heater pad must be correctly positioned so that the when the half moon clips are secured they are not too close to the heating loops or the surface of the heater pad.

Position the heater pad in the correct position. Do not remove the backing from the adhesive surfaces.

Secure one half of the heater pad. Fold up the other half.

Pull the backing (or part of the backing) off the adhesive surface closest to the center of the section of the heater pad that is bent up.

Carefully bring the adhesive surface down onto the foam filling. Work with small sections at a time. Start from the center and work out towards the edges.

Continue in the same way with the other adhesive surfaces.

Fig. 145: End Of The Pad Not Up On Flat Surface
Courtesy of VOLVO CARS CORPORATION

If the heater pad terminates at the channel, position it as illustrated.

NOTE: The end of the pad must not be up on the flat surface.

Fig. 146: Identifying Proper Pad Fill Position
Courtesy of VOLVO CARS CORPORATION

If the heater pad is the type where the pad and/or cable is placed in the channel, the pad must follow the foam filling as illustrated. If not, the pad and/or cable may be loaded and damage the pad. The type of seam on the upholstery may cause wear in the long term.

Fig. 147: Bubbles And Kinks Increase Risk Of Damage To Pad
Courtesy of VOLVO CARS CORPORATION

CAUTION: There must not be any bubbles or kinks when the heater pad is bonded to the foam filling. This increases the risk of damage to the pad during use. This applies to the entire surface, but to the heating wires in particular.

Fig. 148: Locating Positional Straps To Be Cut Apart
Courtesy of VOLVO CARS CORPORATION

When the heater pad has been bonded into place the positional straps (gray in the illustration) must be cut apart. This only applies to those types of heater pads that have positional straps.

NOTE: The positional straps must not be cut before bonding is complete.

CHECKING BONDING

Fig. 149: Identifying Tested Bonding
Courtesy of VOLVO CARS CORPORATION

This check can be performed either with the upholstery completely removed or with it partially in position.

Press at those points illustrated. Check that the heater pad follows the compression of the cushion.

There must be no kinks or other defects in the heater pad when it is pressed.

INSTALLING UPHOLSTERY AND FRONT SEAT

Install:

- the seat cushion upholstery. See: **UPHOLSTERY SEAT CUSHION, REPLACING**
- the backrest cushion upholstery. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**
- the front seat. See: **FRONT SEAT, REPLACING**.

FINISHING

TEST THE FUNCTION OF THE HEATER PAD

Start the seat heater and check the function.

NOTE: **This check is not possible if the ambient temperature is too high.**

LUMBAR SUPPORT BACKREST CUSHION, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE LUMBAR SUPPORT

Fig. 150: Backrest Cushion Upholstery
Courtesy of VOLVO CARS CORPORATION

Remove:

- the front seat. See: **FRONT SEAT, REPLACING**
- the backrest cushion upholstery. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**
- the protective pad. It is secured with 4 hidden clips.

Fig. 151: Identifying Backrest Padding Half-Moon Clips
Courtesy of VOLVO CARS CORPORATION

- the 4 x half moon clips. Remove the padding from the backrest.

Fig. 152: Identifying Backrest Mounting Screws And Hooks
Courtesy of VOLVO CARS CORPORATION

- the 2 x mounting screws from the side of the backrest
- the hooks, 3 on each side.

Detach the mechanical cables, 1 on each side.

Remove the lumbar support.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE LUMBAR SUPPORT

Install:

- the lumbar support
- the 2 mounting screws. Tighten
- the mechanical cables, 1 on each side
- the hooks, 3 on each side

- the padding using the 4 half moon clips
- the protective pad
- the backrest cushion upholstery. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**.

Tension the lumbar support.

Install the front seat. See: **FRONT SEAT, REPLACING**.

OCCUPANT WEIGHT SENSOR (OWS), REPLACING

see **OCCUPANT WEIGHT SENSOR (OWS), REPLACING**

POWER SEAT MODULE (PSM), REPLACING

see **POWER SEAT MODULE (PSM), REPLACING**

OCCUPANT WEIGHT SENSOR (OWS), REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in**

the illustrations is always correct.

INFORMATION

IMPORTANT INFORMATION

CAUTION: In the event of suspected silicone leakage, see. See OCCUPANT WEIGHT SENSOR (OWS), CHECKING .

CAUTION: The entire system must be replaced when replacing the occupant weight sensor (OWS). This is because the occupant weight sensor (OWS) components are calibrated to each other by the manufacturer. The occupant weight sensor (OWS), foam (seat cushion) and a pressure sensor/cushion filled with silicone are included in the system.

REPLACING THE OCCUPANT WEIGHT SENSOR (OWS)

REMOVING THE OCCUPANT WEIGHT SENSOR (OWS)

Fig. 153: Disconnecting Battery Negative Cable
Courtesy of VOLVO CARS CORPORATION

Ignition off.

Disconnect the battery negative lead. See: **BATTERY, DISCONNECTING** .

Fig. 154: Identifying Front Passenger Seat Cushion
Courtesy of VOLVO CARS CORPORATION

Remove the seat cushion upholstery: **UPHOLSTERY SEAT CUSHION, REPLACING**.

Place the seat on its back. Fold up the upholstery. Remove the seat cushion.

Fig. 155: Identifying Pressure Sensor Connector and Clip/Holder
Courtesy of VOLVO CARS CORPORATION

Remove:

- the pressure sensor/silicone cushion (1) from the bracket
- the clip/holder (2) for the cable harness.

Fig. 156: Removing Pressure Sensor/Silicone Cushion
Courtesy of VOLVO CARS CORPORATION

- the 2 clips.

CAUTION: Remove the clips by bending the seat base nearest to the clips. Failure to do so may result in silicone leakage.

Remove the pressure sensor/silicone cushion.

CAUTION: Handle the pressure sensor/silicone cushion with care.

Fig. 157: Identifying Connectors From The Multi-Connector
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 screws under the seat
- the connector at the end mounting
- the connectors from the multi-connector.

INSTALLING THE OCCUPANT WEIGHT SENSOR (OWS)

Fig. 158: Installing The Occupant Weight Sensor (OWS)
Courtesy of VOLVO CARS CORPORATION

NOTE: Insert the cable harness and the occupant weight sensor through the seat base.

Install:

- the 2 screws. Tighten
- the connector at the end mounting
- the connectors on the multi-connector
- the pressure sensor/silicone cushion on the bracket under the seat. Secure the silicone hose in the clip/holder
- the pressure sensor/silicone cushion using 2 clips
- the seat cushion. Fold down and secure the upholstery. See: **UPHOLSTERY SEAT CUSHION, REPLACING**
- the battery negative lead. See: **BATTERY, DISCONNECTING** .

FINISHING

STORING THE ID NUMBER FOR THE OCCUPANT WEIGHT SENSOR (OWS)

CAUTION: Store the ID number for the occupant weight sensor (OWS). This requires

VIDA (Volvo scan tool) vehicle communication.

CALIBRATING THE OCCUPANT WEIGHT SENSOR (OWS)

WARNING: Calibrate the Occupant weight sensor (OWS). This requires VIDA (Volvo scan tool) vehicle communication.

POWER SEAT MODULE (PSM), REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVAL

REMOVING THE POWER SEAT MODULE (PSM)

Raise the seat to its highest position.

Fig. 159: Identifying Ignition In Off Position
Courtesy of VOLVO CARS CORPORATION

Lift the seat out of the vehicle. See: **FRONT SEAT, REPLACING**.

Fig. 160: Identifying Ignition Key Off
Courtesy of VOLVO CARS CORPORATION

Remove the key. The key must be removed to ensure that the ignition is not switched on by mistake.

Wait one minute before starting work.

Remove the 2 screws.

Disconnect the connector.

Remove the control module.

INSTALLATION

INSTALLING THE POWER SEAT MODULE (PSM)

Install:

- the control module
- the connector
- the 2 screws. Tighten
- the key
- the front seat as described in, see **FRONT SEAT, REPLACING**.

FINISHING

ORDERING SOFTWARE

Order software. See: 9438271 .

FINISHING

Check that no diagnostic trouble codes have been stored during the repair.

Test operate the seat. Check all the functions.

SEAT HEATING MODULE (SHM), REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

IGNITION OFF

Fig. 161: Identifying Ignition In OFF Position
Courtesy of VOLVO CARS CORPORATION

Move the seat to its uppermost position.

Ignition off.

REMOVAL

REMOVING THE SEAT HEATING MODULE (SHM)

Fig. 162: Identifying Driver Seat And Control Button
Courtesy of VOLVO CARS CORPORATION

Fig. 163: Identifying Screw
Courtesy of VOLVO CARS CORPORATION

Fig. 164: Identifying Seat Heating Module Connectors
Courtesy of VOLVO CARS CORPORATION

INSTALLATION

To install, reverse the removal procedure.

SEAT RAILS FRONT SEAT, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING THE SEAT RAILS

Remove:

- the front seat. See: **FRONT SEAT, REPLACING**
- the seat belt buckle. See: **BUCKLE SEAT BELT FRONT, REPLACING**
- the motor for front-rear adjustment. See: **ELECTRIC MOTOR CUSHION, REPLACING**.

Fig. 165: Locating 4 x M8 Stud Screws
Courtesy of VOLVO CARS CORPORATION

- 4 x M8 stud screws.
- the 4 rivets. See: **REMOVING RIVET**
- seat rails.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE SEAT RAILS

Install:

- 4 rivets
- seat rails.

NOTE: Apply a drop of locking fluid before installing the stud screws.

Install:

- 4 x M8 stud screws. Tighten
- the seat belt buckle. See: **BUCKLE SEAT BELT FRONT, REPLACING**
- the motor for front-rear adjustment. See: **ELECTRIC MOTOR CUSHION, REPLACING**
- the front seat. See: **FRONT SEAT, REPLACING**.

SEAT TRACK SENSOR (STS), REPLACING (2009-2012)

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

REMOVING THE FRONT SEAT

Remove the front seat. See: **FRONT SEAT, REPLACING**.

REMOVAL

REMOVING SEAT TRACK SENSOR (STS)

Fig. 166: Identifying Removal Of Locking Pin For Sensor
Courtesy of VOLVO CARS CORPORATION

Remove the locking pin for the sensor.

HINT: Screw a small panel screw into the locking pin. Use cutting pliers to pull it out.

Remove the seat track sensor (STS).

NOTE: Make a note of how the wiring is routed.

Fig. 167: Removing Seat Track Sensor
Courtesy of VOLVO CARS CORPORATION

Bend the catch for the connector to one side. Press out the connector. Remove the connector.

INSTALLATION

INSTALLING THE SEAT TRACK SENSOR (STS)

Install:

- the sensor
- the snap ring
- the connector.

CAUTION: Route the wiring as noted earlier. Route the wiring so that it does not rub and is not pinched.

Install the front seat. See: **FRONT SEAT, REPLACING**.

SIDE PANEL FRONT SEAT, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

INFORMATION

METHOD CONTENT

This method consists of:

- see **SIDE PANEL POWER FRONT SEAT, REPLACING**
- see **SIDE PANEL, MECHANICAL FRONT SEAT, REPLACING**.

SIDE PANEL POWER FRONT SEAT, REPLACING

REMOVING THE SIDE PANEL POWER FRONT SEAT

Fig. 168: First Pull Up Front Edge Of Side Panel & Then Pull Up Rear Edge Of Side Panel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery negative lead. See: **BATTERY, DISCONNECTING**
- the screw at the front edge of the side panel.

Pull the side panel up to detach it from the seat. First pull up the front edge of the side panel. Then pull up the rear edge of the side panel.

Remove:

- the 3 tie straps
- the connector under the seat cushion
- the 3 screws. Remove the control panel from the side panel.

INSTALLING THE SIDE PANEL, POWER FRONT SEAT

Install:

- the control panel using the 3 screws. Tighten
- the connector under the seat cushion

- the 3 tie straps.

Press the side panel into place on the seat.

Install:

- the screw at the front edge of the side panel. Tighten
- the battery lead. See: **BATTERY, DISCONNECTING** .

SIDE PANEL, MECHANICAL FRONT SEAT, REPLACING

REMOVING THE SIDE PANEL, MECHANICAL FRONT SEAT

Fig. 169: First Pull Up Front Edge Of Side Panel & Then Pull Up Rear Edge Of Side Panel
Courtesy of VOLVO CARS CORPORATION

HINT: Pump up the seat cushion to the highest position.

Remove the screw at the front edge of the side panel.

HINT: Lift up the side panel at the front edge to access the screw for the handle.

Remove the screw for the handle. Pull the handle off.

Pull the side panel up to detach it from the seat. First pull up the front edge of the side panel. Then pull up the rear edge of the side panel.

INSTALLING THE SIDE PANEL, MECHANICAL FRONT SEAT

Fig. 170: Identifying Side Panel On Rail For Handle
Courtesy of VOLVO CARS CORPORATION

Thread the side panel on the rail (1) for the handle.

Install the handle using 1 screw. Tighten.

Press the side panel into place.

Install the screw at the front edge of the side panel. Tighten.

Lower the seat cushion.

UPHOLSTERY BACK REST, REPLACING (2009-2012)

Special tools:

see **1158962**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

REMOVAL

REMOVING BACKREST CUSHION UPHOLSTERY

Remove the front seat. See: **FRONT SEAT, REPLACING**.

Slacken off the tension in lumbar support.

Carefully detach the cover for the lumbar support adjustment knob. Pull the lumbar support adjustment knob straight out.

Press down the 2 catches on the bottom edge of the protective pad. Press through the upholstery.

Lift the head restraint upwards while the catches are pressed in.

Remove the head restraint.

If the front seat is manually operated, remove the backrest adjustment knob. Pull the knob straight out.

Fold the backrest cushion backwards if it can be folded. If the backrest cushion cannot be folded, position it in the forward angled position.

Fig. 171: Identifying Upholstery
Courtesy of VOLVO CARS CORPORATION

Remove the upholstery. Start at the bottom edge and continue upwards along the entire backrest cushion. Cut off the 12 x half moon clips as the upholstery is pulled up on the front.

Fig. 172: Identifying Velcro Seam
Courtesy of VOLVO CARS CORPORATION

Unhook the Velcro seam on the reverse. Remove the upholstery.

INSTALLATION

INSTALLING BACKREST CUSHION UPHOLSTERY

Fig. 173: Identifying Upholstery Threaded Over Backrest Cushion
Courtesy of VOLVO CARS CORPORATION

Thread the upholstery over the backrest cushion. Secure the half moon clips as the upholstery is pulled down. Use: see **1158962** .

Install:

- the Velcro seam on the reverse of the backrest cushion
- the upholstery at the bottom edge
- the lumbar support adjustment knob and its cover
- the backrest adjustment knob (if applicable).

Install the head restraint. Press the head restraint down until the catches engage.

NOTE: **Lift in the head restraint. Check that the head restraint cannot be moved upwards.**

Install the front seat. See: **FRONT SEAT, REPLACING**.

UPHOLSTERY SEAT CUSHION, REPLACING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

REMOVING THE FRONT SEAT

Remove the front seat. See: **FRONT SEAT, REPLACING**.

REMOVAL

REMOVING THE SEAT CUSHION UPHOLSTERY

Fig. 174: Identifying Upholstery Clip
Courtesy of VOLVO CARS CORPORATION

Unhook the upholstery from around the seat frame.

Lift up the upholstery.

Unclip the upholstery from the seat cushion.

INSTALLATION

INSTALLING SEAT CUSHION UPHOLSTERY

Snap the upholstery into place on the seat cushion.

Pull down the upholstery. Hook the upholstery into place around the seat frame.

Install the front seat. See: **FRONT SEAT, REPLACING**.

WARNING: If the car is equipped with an occupant weight sensors (OWS), this must always be calibrated if the upholstery has been removed or replaced. This requires VIDA (Volvo scan tool) vehicle communication.

WHIPLASH UNIT, REPLACING (2009-2012)

Special tools:

see **9512943**

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

INFORMATION

METHOD CONTENT

This method consists of:

- Whiplash unit non-folding seat, replacing
- Whiplash unit folding seat, replacing.

WHIPLASH UNIT NON-FOLDING SEAT, REPLACING

IMPORTANT INFORMATION

Fig. 175: Components For Non-Folding Seat
Courtesy of VOLVO CARS CORPORATION

Always replace on both sides of the seat, and replace all components included in the repair kit.

The illustration only shows components for non-folding seats and for one side.

The procedure shows replacement on one side of the seat.

PREPARATORY WORK

REMOVING THE FRONT SEAT

Remove the front seat. See: **FRONT SEAT, REPLACING**.

REMOVAL

REMOVING THE WHIPLASH UNIT ON NON-FOLDING SEATS

Fig. 176: Detaching Cover Over Screws On Side Of Seat
Courtesy of VOLVO CARS CORPORATION

Remove the side panel from the seat and place to one side.

Detach the cover over the screws on the side of the seat.

Fig. 177: Identifying Screws Holding Backrest Cushion
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws holding the backrest cushion.

Lay down the backrest cushion on the seat cushion.

Fig. 178: Releasing Folding Mechanism
Courtesy of VOLVO CARS CORPORATION

Detach the backrest upholstery at the bottom edge. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**.

Release the folding mechanism.

Fig. 179: Identifying Spring And Stop
Courtesy of VOLVO CARS CORPORATION

Lift the spring off the stop using see **9512943** .

Fig. 180: Identifying Whiplash Element
Courtesy of VOLVO CARS CORPORATION

Pull the entire whiplash unit down to release one end of the whiplash element.

Remove the nut and the shaft.

NOTE: Note the location of the bushing.

Fig. 181: Identifying Upper Screw
Courtesy of VOLVO CARS CORPORATION

Slacken off and remove the upper screw.

Detach the bracket and remove the spring.

Fig. 182: Identifying Whiplash Element
Courtesy of VOLVO CARS CORPORATION

Angle out and remove the whiplash element.

Fig. 183: Identifying Rubber Gasket
Courtesy of VOLVO CARS CORPORATION

Replace the rubber gasket with a new one.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE WHIPLASH UNIT ON NON-FOLDING SEATS

Fig. 184: Identifying Whiplash Element
Courtesy of VOLVO CARS CORPORATION

Install a **new** whiplash element.

Fig. 185: Identifying Upper Screw
Courtesy of VOLVO CARS CORPORATION

Install:

- a new spring
- the bracket
- a new Torx screw and tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**

Fig. 186: Identifying Whiplash Element
Courtesy of VOLVO CARS CORPORATION

Install:

- the shaft
- the bushing
- the lock nut; tighten the M8 screw and the nut. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Fig. 187: Identifying Spring And Stop
Courtesy of VOLVO CARS CORPORATION

Slide the entire whiplash unit up towards the backrest frame.

Hook on the spring using see **9512943** .

Reinstall the upholstery.

Install:

- the 4 x M10 screws for the backrest frame
- the cover
- the side panel.

FINISHING

INSTALLING THE FRONT SEAT

Install the front seat. See: **FRONT SEAT, REPLACING**.

WHIPLASH UNIT FOLDING SEAT, REPLACING

IMPORTANT INFORMATION

Fig. 188: Components For Folding Seats
Courtesy of VOLVO CARS CORPORATION

Always replace on both sides of the seat, and replace all components included in the repair kit.

The illustration only shows components for folding seats and for one side.

The procedure shows replacement on one side of the seat.

PREPARATORY WORK

REMOVING THE FRONT SEAT

Remove the front seat. See: **FRONT SEAT, REPLACING**.

REMOVAL

REMOVING THE WHIPLASH UNIT ON FOLDING SEATS

Fig. 189: Identifying Screws Cover
Courtesy of VOLVO CARS CORPORATION

Remove the side panel from the seat and place to one side.

Detach the cover over the screws on the side of the seat.

Release the catches on the reverse of the seat.

Fold the backrest cushion forwards.

Detach the backrest upholstery at the bottom edge. See: **UPHOLSTERY BACK REST, REPLACING (2009-2012)**.

Fig. 190: Releasing Folding Mechanism
Courtesy of VOLVO CARS CORPORATION

Release the folding mechanism.

Fig. 191: Backrest Cushion Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws holding the backrest cushion.

Fig. 192: Identifying Spring And Stop
Courtesy of VOLVO CARS CORPORATION

Lift the spring off the stop using see **9512943** .

Fig. 193: Identifying Nut And Shaft
Courtesy of VOLVO CARS CORPORATION

Remove the nut and the shaft.

NOTE: Note the position of the 2 x bushings.

Fig. 194: Identifying Locking Washer
Courtesy of VOLVO CARS CORPORATION

Remove the locking washer at the spring.

HINT: Use cutting nippers to facilitate removal of the locking washer. Then remove the spring.

Fig. 195: Identifying Whiplash Element
Courtesy of VOLVO CARS CORPORATION

Angle out and remove the whiplash element.

Fig. 196: Identifying Rubber Gasket
Courtesy of VOLVO CARS CORPORATION

Remove and replace the rubber gasket with a new one.

INSTALLATION

NOTE: For tightening torques, see: TIGHTENING TORQUE .

INSTALLING THE WHIPLASH UNIT ON FOLDING SEATS

Fig. 197: Identifying Whiplash Element
Courtesy of VOLVO CARS CORPORATION

Install a **new** whiplash element.

Fig. 198: Identifying Spring And Locking Washer
Courtesy of VOLVO CARS CORPORATION

Install:

- a new spring
- the locking washer.

Fig. 199: Identifying Nut And Shaft
Courtesy of VOLVO CARS CORPORATION

Install:

- the shaft
- the bushings
- the lock nut, tighten the M8 screw and the nut. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS** .

Fig. 200: Identifying Whiplash Unit
Courtesy of VOLVO CARS CORPORATION

Slide the entire whiplash unit up towards the backrest frame.

Hook on the spring using see **9512943** .

Fig. 201: Backrest Cushion Screws
Courtesy of VOLVO CARS CORPORATION

Reinstall the upholstery.

Install:

- the 4 x M10 screws for the backrest frame
- the cover
- the side panel.

FINISHING

INSTALLING THE FRONT SEAT

Install the front seat. See: **FRONT SEAT, REPLACING**.

FRONT SEAT, DRIVER'S SEAT (EXECUTIVE; 2009-2011)

BLOWER FRONT SEAT BACKREST.

NOTE: Removal steps in this procedure may contain installation details.

Remove the upholstery, see **UPHOLSTERY BACK REST, REPLACING (2009-2012)**

Fig. 202: Identifying Installation Clips
Courtesy of VOLVO CARS CORPORATION

Fig. 203: Identifying Component Connections
Courtesy of VOLVO CARS CORPORATION

INSTALLATION

To install, reverse the removal procedure.

BLOWER FRONT SEAT CUSHION

NOTE: Removal steps in this procedure may contain installation details.

Remove front seat, see **FRONT SEAT, REPLACING**

Fig. 204: Identifying Assembly Components (1 of 4)
Courtesy of VOLVO CARS CORPORATION

NOTE: On both sides.

Fig. 205: Identifying Assembly Components (2 of 4)
Courtesy of VOLVO CARS CORPORATION

INSTALLATION

To install, reverse the removal procedure.

INTERIOR (NON-SEAT) UPHOLSTERY (2003-2008)

CARGO FLOOR SUPPORT, REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

Included in this method are methods for:

- cargo floor support, 5 seater version. See **CARGO FLOOR SUPPORT, 5 SEATER VERSION, REPLACING**
- cargo floor support, 7 seater version. See **CARGO FLOOR SUPPORT, 7 SEATER VERSION, REPLACING**.

CARGO FLOOR SUPPORT, 5 SEATER VERSION, REPLACING

REMOVING THE CARGO FLOOR SUPPORT, 5 SEATER VERSION

Fig. 240: Removing The Cargo Floor Support
Courtesy of VOLVO CARS CORPORATION

Remove:

- the rear floor hatch
- the front floor hatch
- the outer floor hatch
- the front and the rear storage compartments
- the jack
- the 2 screws for the rear mounting
- the 3 screws.

Press the cargo floor support forward.

Fold up the inside.

Lift out the cargo floor support.

INSTALLING THE CARGO FLOOR SUPPORT, 5 SEATER VERSION

NOTE: For tightening torques, see TIGHTENING TORQUE .

Fold in the cargo floor support.

Install:

- the 2 M6 screws for the rear mounting Tighten
- the 3 M6 screws. Tighten
- the jack
- the outer floor hatch
- the front and the rear storage compartments
- the front floor hatch
- the rear floor hatch.

CARGO FLOOR SUPPORT, 7 SEATER VERSION, REPLACING

REMOVING THE CARGO FLOOR SUPPORT, 7 SEATER VERSION

Fig. 241: Removing Floor Hatches
Courtesy of VOLVO CARS CORPORATION

Remove:

- the rear floor hatch

- the outer floor hatch
- the front floor hatch.

To remove the cargo floor support on the left and right-hand sides: Only remove the 1 outer M6 screw and the clip in the center of the floor hatch.

HINT: Insert the handle of a screwdriver between the front floor hatch and the side panel in the cargo compartment to make it easier to access the outer screw.

Fig. 242: Removing Battery Bracket
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery bracket
- the 2 screws
- 1 nut.

Fig. 243: Removing Cargo Floor Support
Courtesy of VOLVO CARS CORPORATION

To remove the cargo floor support on the left and right-hand sides: Only remove the outer mountings on the left and right-hand sides of the flap.

Remove:

- the 2 screws
- the 3 screws.

Lift out the cargo floor support.

INSTALLING THE CARGO FLOOR SUPPORT, 7 SEATER VERSION

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the cargo floor support
- the 3 M6 screws. Tighten
- the outer mountings on each side of the flap

- the 2 M6 screws. Tighten
- the battery bracket
- the 2 M8 screws. Tighten
- 1 M8 nut. Tighten
- the front load floor
- 1 M6 screw. Tighten
- the 1 clip
- the outer floor hatch
- the rear floor hatch.

CLOTHES HOLDER HEAD RESTRAINT FRONT SEAT

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

ORDERING ZIP FASTENER CATCH

NOTE: A zip fastener catch is required to carry out this work. This is not included with the upholstery but is ordered separately.

REMOVAL

REMOVING CLOTHES HOLDER, HEAD RESTRAINTS

Press down the 2 catches in the underside of the protective pad. Press through the upholstery.

Lift the head restraint upwards while the catches are pressed in.

Remove the head restraint.

Fig. 244: Cutting Upholstery At Zip Fastener
Courtesy of VOLVO CARS CORPORATION

Remove the 2 staples locking the zip fastener.

Open the zip fastener by pulling it apart with your fingers.

Remove:

- upholstery
- the shear fabric

Fig. 245: Identifying Retaining Clip And Round-Nose Pliers
Courtesy of VOLVO CARS CORPORATION

Pull the retaining clip (1) straight out. Remove the retaining clip.

HINT: Use round-nose pliers.

NOTE: If the plastic frame is damaged when pulling out the retaining clip, bond using rapid bonding adhesive.

INSTALLATION

INSTALLING CLOTHES HOLDER HEAD RESTRAINTS

Fig. 246: Identifying New Retaining Clip
Courtesy of VOLVO CARS CORPORATION

Insert a **new** retaining clip.

NOTE: Ensure that the clips are correctly located. See the illustration.

Install:

- the sheer fabric
- upholstery

HINT: Heat up the upholstery slightly before installation to make it more elastic.

Ensure that the hole in the upholstery is directly opposite the hole in the clothes holder.

Fig. 247: Closing Zip Fastener
Courtesy of VOLVO CARS CORPORATION

Use a zip fastener catch to close the zip fastener.

NOTE: **Ensure that all seams are correctly positioned and the padding is not kinked under the upholstery.**

Fig. 248: Identifying Zip Fastener Stapled Together At Both Ends
Courtesy of VOLVO CARS CORPORATION

Staple the zip fastener together at both ends.

Fig. 249: Identifying Clothes Holder Installation With Hammer
Courtesy of VOLVO CARS CORPORATION

Install and press the clothes holder into place.

HINT: Tap it gently using a hammer to ensure it is properly secured.

Install the head restraint. Press the head restraint down until the catches engage.

NOTE: Lift in the head restraint. Check that it cannot be moved upwards.

FLOOR HATCH FRONT, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

REMOVING COMPONENTS AND IMPORTANT INFORMATION

This method only applies to 7 seat vehicles.

NOTE: **On vehicles with belts, the female mounting must be transferred or a new one installed on the new floor hatch. See VIDA Replacement part information.**

Slide in and fold down the third row of the seats and backrest cushions.

Remove the cargo compartment side panels on both sides. See: **SIDE PANEL CARGO COMPARTMENT (SEVEN SEATER VERSION), REPLACEMENT**. It does not need to be removed.

Remove the rear floor hatch. See: **FLOOR HATCH REAR, REPLACING**.

REMOVAL

REMOVING THE FRONT FLOOR HATCH

Fig. 250: Identifying Assembly Screws and Bolts
Courtesy of VOLVO CARS CORPORATION

Lift the side panels slightly to access the outer screws. The side panels are in the guides on both sides of the front floor hatch.

Remove:

- the 2 screws

- the press clip.

Lift out the front floor hatch.

TRANSFERRING COMPONENTS

TRANSFERRING THE BELT

Fig. 251: Removing Belt
Courtesy of VOLVO CARS CORPORATION

Remove the 3 screws in the reinforcement member on the removed floor hatch.

Lift up and the reinforcement member. Remove the belt.

Fig. 252: Removing Reinforcement Member
Courtesy of VOLVO CARS CORPORATION

Remove the 3 screws in the reinforcement member on the new floor hatch.

Lift out the reinforcement member.

Fig. 253: Making Hole In Belt
Courtesy of VOLVO CARS CORPORATION

Use a **5 mm awl** . Make a hole in the belt **approximately 10 mm** from the upper end. See the illustration.

Fig. 254: Positioning Belt
Courtesy of VOLVO CARS CORPORATION

Position the belt between the floor hatch and the reinforcement member.

Install the 3 screws. Tighten.

INSTALLATION

INSTALLING THE FRONT FLOOR HATCH

Fig. 255: Installing The Front Floor Hatch
Courtesy of VOLVO CARS CORPORATION

Install the floor hatch in the vehicle.

Install:

- the press clip
- the 2 screws. Tighten. See: **SUMMARY OF TIGHTENING TORQUES FOR SPECIFIC COMPONENTS**
- the side panels. See: **SIDE PANEL CARGO COMPARTMENT (SEVEN SEATER VERSION), REPLACEMENT**.

NOTE: Ensure that the side panels align in the guides on both sides of the floor hatch.

FLOOR HATCH REAR, REPLACING

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATORY WORK

IMPORTANT INFORMATION

This method only applies to 7 seat vehicles.

NOTE: On vehicles with belts, a male mounting must be installed on the new floor hatch. See VIDA Replacement part information.

REMOVAL

REMOVING THE REAR FLOOR HATCH

Fig. 256: Removing Reinforcement Member
Courtesy of VOLVO CARS CORPORATION

Fold up the floor hatch.

Separate the belt at the catch (1).

Remove the floor hatch.

TRANSFERRING COMPONENTS

TRANSFERRING THE BELT

Fig. 257: Reinforcement Member
Courtesy of VOLVO CARS CORPORATION

Remove the 2 screws in the reinforcement member on the removed floor hatch.

Lift up and the reinforcement member. Remove the belt.

Fig. 258: Reinforcement Member
Courtesy of VOLVO CARS CORPORATION

Remove the 2 screws in the reinforcement member on the new floor hatch.

Lift out the reinforcement member.

Fig. 259: Making Hole In Belt
Courtesy of VOLVO CARS CORPORATION

Use a **5 mm awl** . Make a hole in the belt **approximately 10 mm** from the upper end. See the illustration.

Fig. 260: Belt Clip
Courtesy of VOLVO CARS CORPORATION

Position the belt between the floor hatch and the reinforcement member.

Install the 2 screws. Tighten.

INSTALLATION

INSTALLING THE REAR FLOOR HATCH

Fig. 261: Installing The Rear Floor Hatch
Courtesy of VOLVO CARS CORPORATION

Install the floor hatch in the vehicle.

Assemble the catch with the belt (1).

Fold down the floor hatch.

HEADLINING, REPLACING

Special tools	
	T9814116 Hole saw **Tool number:** T9814116 **Tool description:** Hole saw **Tool boards:**

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

PREPARATORY WORK

Fig. 262: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove the battery cable, see **BATTERY, DISCONNECTING** .

Fold down all the backrests on the rear seat.

Remove all the door weather strips from the roof down to the door sill.

REMOVING THE HEADLINING

Fig. 263: Identifying Headlining Assembly Retainer
Courtesy of VOLVO CARS CORPORATION

Remove:

- the sun visors, see **SUN VISOR, REPLACING**
- the roof module, see **UPPER ELECTRONIC MODULE (UEM)/REARVIEW MIRROR, REPLACING**
- the grab handles
- the mounting for the cargo net
- the rear reading lamp, see **BULB, READING LAMP, REAR, REPLACING**
- the connector for the rear reading lamp

- the roof clip.
- Rear intrusion sensor, see **REAR INTRUSION SENSOR**

Fig. 264: Identifying Reading Lamp Cable And Clips
Courtesy of VOLVO CARS CORPORATION

- cantrail panel, see **PANEL CANTRAIL, REPLACING**.

Detach and fold down:

- D-pillar panel, see **PANEL D-POST, REPLACING**
- C-pillar panel, see **PANEL C-POST, REPLACING**.

HINT: Leave the headlining hanging from the B-posts.

Remove the A-pillar panel, see **PANEL A-POST, REPLACING**.

Remove the washer hose at the lower corner by the right-hand A-post.

Detach the washer hose at the trunk lid.

NOTE: There is a risk spillage.

Remove the clips from the cable for the reading lamp.

Fig. 265: Identifying Sunroof Surround
Courtesy of VOLVO CARS CORPORATION

Cars equipped with sun roofs:

Remove the molding around the sun roof.

Pull the molding inwards into the car. Start at the short side so that the corners release.

Fig. 266: Pulling Headlining Out Through Tailgate
Courtesy of VOLVO CARS CORPORATION

Carefully detach the headlining from the B-posts.

Pull the headlining out through the tailgate at an angle.

HINT: Try to keep the headlining as close to the floor as possible.

Fig. 267: Identifying Cable Harness Routing On Headlining
Courtesy of VOLVO CARS CORPORATION

NOTE: **Use tape (P/N 944 1891) to secure the cable harness to the new headlining. Tape the entire cable harness to the headlining so that it is secure.**

INSTALLING THE HEADLINING

Vehicles with Headliner Cellular Phone Microphone

Fig. 268: Identifying Measurement
Courtesy of VOLVO CARS CORPORATION

Fig. 269: Identifying Hole Saw Special Tool For Headlining Installation
Courtesy of VOLVO CARS CORPORATION

see **9814116**

Fig. 270: Identifying Pass-Through Hole For Cable
Courtesy of VOLVO CARS CORPORATION

Fig. 271: Identifying Angle Measurement
Courtesy of VOLVO CARS CORPORATION

NOTE: **For tightening torques, see TIGHTENING TORQUE**

Fig. 272: Identifying Cable Clip
Courtesy of VOLVO CARS CORPORATION

- the clips to the cable for the reading lamp
- the washer hose at the tailgate
- the washer hose at the A-post
- A-pillar panel. See **PANEL A-POST, REPLACING**
- C-pillar panel. See **PANEL C-POST, REPLACING**
- D-pillar panel. See **PANEL D-POST, REPLACING**
- Cantrail panel. See **PANEL CANTRAIL, REPLACING**
- the roof clip.
- the connector for the rear reading lamp

- the rear reading lamp, see **BULB, READING LAMP, REAR, REPLACING**
- the mounting for the cargo net
- the grab handle
- the roof module, see **UPPER ELECTRONIC MODULE (UEM)/REARVIEW MIRROR, REPLACING**
- the sun visors. See **SUN VISOR, REPLACING**

CAUTION: Do not damage or trap any cables when installing the sun visors.

Connect the battery lead. See **BATTERY, DISCONNECTING**

SIDE PANEL CARGO COMPARTMENT, REPLACEMENT

NOTE: The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

SIDE PANEL CARGO COMPARTMENT (SEVEN SEATER VERSION), REPLACEMENT

REMOVING THE SIDE PANEL CARGO COMPARTMENT (SEVEN SEATER VERSION)

Fig. 273: Identifying Side Panel Cargo Compartment And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the outer cargo compartment floor
- the compartment in the rear edge of the side panel
- four covers
- four screws
- one clip
- any air conditioning (A/C) controls.

Detach the lower edges of the C and D panels.

Pull off the side panel and place it to one side.

TRANSFERRING COMPONENTS

When replacing the side panel with air conditioning (A/C) controls with a new side panel, the old air conditioning (A/C) controls must be transferred to the new side panel.

NOTE: On vehicles up to and including chassis number 134247, the following adjustment must be carried out on the transferred air conditioning (A/C) controls.

Fig. 274: Identifying Removal Of A/C Controls From Side Panel
Courtesy of VOLVO CARS CORPORATION

Remove the air conditioning (A/C) controls from the side panel.

Disconnect the connector on the reverse.

Fig. 275: Identifying Felt Material
Courtesy of VOLVO CARS CORPORATION

Cut six 8 x 20 mm pieces of felt material with P/N 116 1691.

Apply two pieces of felt to the top of each lug.

Fig. 276: Identifying Felt Material
Courtesy of VOLVO CARS CORPORATION

Apply a piece of felt to the bottom of each lug.

INSTALLING THE SIDE PANEL CARGO COMPARTMENT (SEVEN SEATER VERSION)

NOTE: For tightening torques, see TIGHTENING TORQUE .

Fig. 277: Identifying Side Panel Cargo Compartment And Screws
Courtesy of VOLVO CARS CORPORATION

Lift the side panel.

NOTE: **If the vehicle is equipped with rear air conditioning (A/C) the cable harness for the air conditioning (A/C) controls must be routed through the hole for the air conditioning (A/C) controls on the side panel.**

NOTE: **The front edge of the side panel must protrude in front of the sill trim panel of the rear side door.**

Secure:

- the side panel
- the C and D panels at the lower edges.

Install:

- any air conditioning (A/C) controls
- the clip
- the 2 x M8 (load securing eyes) screws. Tighten

- the 2 x covers
- the 2 x M6 screws (the upper mountings). Tighten
- the 2 x covers
- the compartment in the rear edge of the side panel
- the outer cargo compartment floor.

SIDE PANEL CARGO COMPARTMENT (FIVE SEATER VERSION), REPLACEMENT

REMOVING THE SIDE PANEL CARGO COMPARTMENT (FIVE SEATER VERSION)

Fig. 278: Identifying Side Panel Cargo Compartment And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the outer cargo compartment floor
- the compartment in the rear edge of the side panel
- four covers
- four screws.

Detach the lower edges of the C and D panels.

Pull off the side panel and place it to one side.

INSTALLING THE SIDE PANEL CARGO COMPARTMENT (FIVE SEATER VERSION)

NOTE: For tightening torques, see TIGHTENING TORQUE .

Fig. 279: Identifying Side Panel Cargo Compartment And Screws
Courtesy of VOLVO CARS CORPORATION

Lift the side panel.

NOTE: The front edge of the side panel must protrude in front of the sill trim panel of the rear side door.

Secure:

- the side panel
- the C and D panels at the lower edges.

Install:

- the 2 x M8 (load securing eyes) screws. Tighten
- the 2 x covers

- the 2 x M6 screws (the upper mountings). Tighten
- the 2 x covers
- the compartment in the rear edge of the side panel
- the outer cargo compartment floor.

SOUNDPROOFING PANEL, REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

SOUNDPROOFING PANEL PASSENGER SIDE, REPLACING

REMOVING THE PASSENGER SIDE SOUNDPROOFING PANEL

Fig. 280: Identifying Center Console Panel And Soundproofing Panel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the side panel
- the 2 screws

- the soundproofing panel.

INSTALLING THE SOUNDPROOFING PANEL ON THE PASSENGER SIDE

Install:

- the soundproofing panel
- the 2 screws. Tighten
- side panel.

SOUNDPROOFING PANEL DRIVER'S SIDE, REPLACING

REMOVING THE SOUNDPROOFING PANEL ON THE DRIVER'S SIDE

Fig. 281: Identifying Center Console Panel And Soundproofing Panel
Courtesy of VOLVO CARS CORPORATION

Remove:

- the side panel
- the 2 screws
- the soundproofing panel.

INSTALLING THE SOUNDPROOFING PANEL ON THE DRIVER'S SIDE

Install:

- the soundproofing panel
- the 2 screws. Tighten
- side panel.

HEAD RESTRAINT FRONT SEAT

Fig. 282: Identifying Catches At Bottom Of Protective Pad And Head Restraint
Courtesy of VOLVO CARS CORPORATION

Press the two catches at the bottom of the protective pad downwards.

Press through the upholstery.

Lift the head restraint upwards while the catches are pressed in.

Press down head restraint until the catches lock.

NOTE: **Check by lifting the head restraint.**

It should not be possible to move it upwards.

UPHOLSTERY HEAD RESTRAINT FRONT

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

Preparations

NOTE: **To carry out this work a zip fastener is required. This is not included in the upholstery but is ordered separately. 6 mm zip fastener part number: 3533976 is used and in some cases zip fastener 4 mm, part number: 9459316**

REMOVING UPHOLSTERY

Fig. 283: Cutting Upholstery At Zip Fastener
Courtesy of VOLVO CARS CORPORATION

Remove the head restraint. See **HEAD RESTRAINT FRONT SEAT**.

Cut the upholstery at the zip fastener.

Remove the upholstery.

INSTALLING UPHOLSTERY

Fig. 284: Closing Zip Fastener
Courtesy of VOLVO CARS CORPORATION

Install the upholstery.

Close the zip fastener.

NOTE: **Ensure that all seams are correctly positioned and the padding is not kinked under the upholstery.**

HEAD RESTRAINT FRONT SEAT

Fig. 285: Identifying Catches At Bottom Of Protective Pad And Head Restraint
Courtesy of VOLVO CARS CORPORATION

Press the two catches at the bottom of the protective pad downwards.

Press through the upholstery.

Lift the head restraint upwards while the catches are pressed in.

Press down head restraint until the catches lock.

NOTE: Check by lifting the head restraint.

It should not be possible to move it upwards.

UPHOLSTERY HEAD RESTRAINT OUTER REAR SEAT, REPLACING

Fig. 286: Head Restraint Cover

REAR SEAT, PASSENGER SEAT (2003)

SEAT FRAME (THIRD ROW), REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Remove the battery lead. See **BATTERY, DISCONNECTING** .

Fold down the seats in the second row.

Slide in the seat cushions on the third row.

REMOVING THE SEAT FRAME (THIRD ROW)

Fig. 291: Removing The Seat Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the rear cargo compartment floor
- the jack
- the holder for the jack
- the side panel in the cargo compartment. See **SIDE PANEL CARGO COMPARTMENT, REPLACEMENT**
- the front cargo compartment floor.

Fig. 292: Seating Frame Bolts
Courtesy of VOLVO CARS CORPORATION

- the 3 front screws for the frame.

Fold up the rubber mat in the center storage compartment.

Remove:

- the 4 center screws for the frame
- the outer screws for the frame, 2 each side.

Pull the seat cushions forwards.

Remove the cargo floor support. See **CARGO FLOOR SUPPORT, REPLACING**.

Fig. 293: Disconnecting Positive Battery Cable
Courtesy of VOLVO CARS CORPORATION

Disconnect the positive lead from the battery.

Separate the connector at the positive terminal.

Note how the battery lead is routed by the seat frame.

Slide in the seat cushions and fold down the seat backs.

Lift out the seat frame.

NOTE: Two people are required for this operation. Angle the seat frame during removal.

INSTALLING THE SEAT FRAME (THIRD ROW)

NOTE: For tightening torques, see TIGHTENING TORQUE .

Lift in the seat frame.

NOTE: Ensure that the battery lead is not trapped.

Fold up the seat backs.

Install:

- the 3 M10 front screws for the frame. Tighten
- the 4 M10 center screws for the frame
- the 4 M10 outer screws for the frame
- the cargo floor support. See **CARGO FLOOR SUPPORT, REPLACING**.

Fold down the backrests.

Install:

- the front cargo compartment floor with 2 M6 screws and 1 clip. Tighten
- the side panel in the cargo compartment. See **SIDE PANEL CARGO COMPARTMENT, REPLACEMENT**
- the holder for the jack
- the jack
- the rear cargo compartment floor.

SERVICE CLIPS, INSTALLING

see **SERVICE CLIPS, INSTALLING**

REAR SEAT, PASSENGER SEAT (2004-2012)

RELAY HEATER PAD REAR SEAT, REPLACING

REPLACING

PREPARATORY WORK

Remove the rear seat side cushion. See **INTERIOR PANELS, SEATS AND UPHOLSTERY - REMOVAL, REPLACEMENT AND INSTALLATION** .

REMOVING THE RELAY

Fig. 294: Relay Connector
Courtesy of VOLVO CARS CORPORATION

Disconnect the relay connectors.

Remove the screw and the relay.

INSTALLING THE RELAY

Fig. 295: Relay Connector
Courtesy of VOLVO CARS CORPORATION

Install the relay and the screw.

Connect the relay connectors.

FINISHING

Install the rear seat side cushion. See **INTERIOR PANELS, SEATS AND UPHOLSTERY - REMOVAL, REPLACEMENT AND INSTALLATION** .

SIDE CUSHION

REPLACING THE SIDE CUSHION

Remove the cushion according to **CUSHION** .

Fig. 296: Identifying Side Cushion
Courtesy of VOLVO CARS CORPORATION

Unthread the belt from the belt guide.

Insert a hand down the side of the lower section of the side cushion.

Release the catches while lifting the side cushion.

INSTALLATION

Install in reverse order.

SEAT FRAME (THIRD ROW), REPLACEMENT

PREPARATORY WORK

Disconnect the battery negative lead. See: **BATTERY, DISCONNECTING** .

Fold down the seats in the second row.

Slide in the seat cushions on the third row.

REMOVAL

Fig. 297: Installation Screws And Bolts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the rear cargo compartment floor
- the jack
- the battery bracket

NOTE: Leave the plastic cover over the battery in place to avoid any short-circuits.

Remove:

- the holder for the jack
- the side panel in the cargo compartment. See **SIDE PANEL CARGO COMPARTMENT, REPLACEMENT**
- the front cargo compartment floor.

Fig. 298: Seat Frame Bolts
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 3 front screws for the frame.

Fold up the rubber mat in the center storage compartment.

Remove:

- the 4 x center screws for the frame
- the outer screws for the frame, 2 each side.

Pull the seat cushions forwards.

Remove the cargo floor support. See **CARGO FLOOR SUPPORT, REPLACING**.

Fig. 299: Cable Retaining Bracket
Courtesy of VOLVO CARS CORPORATION

Note how the battery lead is routed by the seat frame.

Slide in the seat cushions and fold down the seat backs.

NOTE: **Two people are required for this operation. Angle the seat frame during removal.**

Lift out the seat frame.

INSTALLATION

Fig. 300: Installing Service Clips
Courtesy of VOLVO CARS CORPORATION

Modify when replacing seat track.

NOTE: For tightening torques, see: TIGHTENING TORQUE .

Lift in the seat frame.

NOTE: Ensure that the battery cable is not trapped.

Fold up the seat backs.

Install:

- the 3 M10 front screws for the frame. Tighten
- the 4 M10 center screws for the frame
- the 4 M10 outer screws for the frame
- the cargo floor support. See **CARGO FLOOR SUPPORT, REPLACING**.

Fold down the backrests.

Install:

- the front cargo compartment floor with 2 M6 screws and 1 clip. Tighten
- the side panel in the cargo compartment. See **SIDE PANEL CARGO COMPARTMENT, REPLACEMENT**
- the holder for the jack
- the jack
- the battery bracket using 3 x M8 screws
- the rear cargo compartment floor.

SERVICE CLIPS, INSTALLING

NOTE: **The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.**

INSTALLING SERVICE CLIPS

Fig. 301: Installing Service Clip (1 Of 3)
Courtesy of VOLVO CARS CORPORATION

Fold apart the foam rubber slightly on one side of the clip.

Fig. 302: Installing Service Clip (2 Of 3)
Courtesy of VOLVO CARS CORPORATION

Take the service clip and press it into place under the flange on the old clip.

Check that it is fitted in line with the old clip and that it ends up in position.

Fig. 303: Installing Service Clip (3 Of 3)
Courtesy of VOLVO CARS CORPORATION

Fold back the foam rubber.

UPHOLSTERY BACKREST CUSHION (THIRD ROW), REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fold down the backrest.

Fold the cargo compartment floor up.

REMOVING THE BACKREST CUSHION UPHOLSTERY (THIRD ROW)

Fig. 304: Backrest Screws
Courtesy of VOLVO CARS CORPORATION

Remove the 2 screws.

Fig. 305: Pull Backrest Upwards And Outwards
Courtesy of VOLVO CARS CORPORATION

Fold the backrest up.

Remove:

- backrest. Pull upwards and outwards.

Fig. 306: Side Piece At Head Restraint & Backrest
Courtesy of VOLVO CARS CORPORATION

- the side piece at the head restraint
- the side piece at the side of the backrest.

Fig. 307: Upholstery From Back Panel
Courtesy of VOLVO CARS CORPORATION

Remove the upholstery from the back panel. The upholstery is secured at 13 mounting points.

Fig. 308: Upholstery/Foam From Seat Frame
Courtesy of VOLVO CARS CORPORATION

Remove:

- the upholstery/foam from the seat frame
- the upholstery from the foam.

INSTALLING THE BACKREST CUSHION UPHOLSTERY (THIRD ROW)

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the upholstery on the foam
- the upholstery/foam on the backrest frame.

Hook the upholstery onto the back panel.

Install the back by securing and pressing downwards.

Fold down the backrest.

Install the 2 M6 screws. Tighten

Fold the backrest up.

Install:

- the side piece at the head restraint
- the side piece at the side of the backrest.

UPHOLSTERY BACKREST CUSHION CENTER (SECOND ROW), REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE CENTER SEAT (SECOND ROW)

Fig. 309: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery lead according to: **BATTERY, DISCONNECTING**
- the outer seat according to: **REMOVING THE OUTER SEAT (SECOND ROW)**.

Fig. 310: Identifying Removal Of Front Side Pieces
Courtesy of VOLVO CARS CORPORATION

Disconnect the connector under the seat.

Remove the 4 side pieces on the seat over the screws.

Pull the front side pieces straight forward to detach them.

Fig. 311: Identifying Removal Of Rear Side Pieces
Courtesy of VOLVO CARS CORPORATION

Pull the rear side pieces upwards to detach them.

Remove the 4 screws.

Lift out the seat.

REMOVING THE UPHOLSTERY FROM THE CENTER BACKREST CUSHION (SECOND ROW)

Fig. 312: Identifying Screws For Seat Belt Bracket
Courtesy of VOLVO CARS CORPORATION

Remove:

- the head restraint
- the 2 screws for the seat belt bracket.

Fig. 313: Folding Out Weatherstrip From Channel In Rear Section
Courtesy of VOLVO CARS CORPORATION

Fold out the weatherstrip from the channel in the rear section.

Remove the upholstery.

Fig. 314: Folding Up Upholstery
Courtesy of VOLVO CARS CORPORATION

Fold up the upholstery.

Remove:

- the 3 screws
- the rear section.

Fig. 315: Pulling Guide Sleeves Straight Up
Courtesy of VOLVO CARS CORPORATION

- the guide sleeves for the head restraint.

Press in the catches.

Pull the guide sleeves straight up.

Fig. 316: Detaching Upholstery From Clip In Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the upholstery / cushion from the seat frame
- the upholstery from the cushion.

Detach the upholstery from the clip in the cushion.

INSTALLING SERVICE CLIPS

Install the service clips according to: **SERVICE CLIPS, INSTALLING**

INSTALLING THE UPHOLSTERY ON THE CENTER BACKREST CUSHION (SECOND ROW)

Fig. 317: Folding In Weatherstrip Into Channel In Rear Section
Courtesy of VOLVO CARS CORPORATION

Install:

- the upholstery for the cushion
- the rear section on the backrest frame
- the 3 screws. Tighten
- the upholstery / cushion on the backrest frame.

Fold in the weatherstrip into the channel in the rear section.

Start with the upper molding, then the lower molding and finally the moldings on the sides.

Install:

- the guide sleeves for the head restraint
- the bracket for the seat belt
- the 2 screws. Tighten
- the head restraint.

INSTALLING THE CENTER SEAT (SECOND ROW)

Lift in the seat.

Install:

- the connector under the seat
- the 4 M10 screws. Tighten
- the side pieces over the screws
- the outer seat according to: **INSTALLING THE OUTER SEAT (SECOND ROW)**.

UPHOLSTERY BACKREST CUSHION OUTER (SECOND ROW)

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

REMOVING THE OUTER SEAT (SECOND ROW)

Fig. 318: Identifying Removal Of Front Side Pieces
Courtesy of VOLVO CARS CORPORATION

Disconnect the side pieces from the seat.

Fig. 319: Identifying Side Pieces And Seat
Courtesy of VOLVO CARS CORPORATION

Fig. 320: Identifying Removal Of Rear Side Pieces
Courtesy of VOLVO CARS CORPORATION

Remove the 4 screws.

Lift out the seat.

REMOVING THE UPHOLSTERY FROM THE OUTER BACKREST CUSHION (SECOND ROW)

Fig. 321: Panel For Grab Handle
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 screws
- the grab handle
- the panel for the grab handle.

Fig. 322: Folding Down Head Restraint
Courtesy of VOLVO CARS CORPORATION

Fold down the head restraint.

Remove:

- the head restraint panel.

Fig. 323: Folding Out Weatherstrip From Channel In Rear Section
Courtesy of VOLVO CARS CORPORATION

- the upholstery from the rear section.

Fold out the weatherstrip from the channel in the rear section.

Fig. 324: Detaching Upholstery From Clip In Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the upholstery / cushion from the seat frame
- the upholstery from the cushion.

Detach the upholstery from the clip in the cushion.

INSTALLING SERVICE CLIPS

Install the service clips according to:**SERVICE CLIPS, INSTALLING**

INSTALLING THE UPHOLSTERY ON THE OUTER BACKREST CUSHION (SECOND ROW)

NOTE: For tightening torques, see:TIGHTENING TORQUE .

Fig. 325: Folding In Weatherstrip Into Channel In Rear Section
Courtesy of VOLVO CARS CORPORATION

Install:

- the upholstery for the cushion
- the upholstery / cushion on the backrest frame.

Fold in the weatherstrip into the channel in the rear section.

Start with the lower weatherstrip, continue with the weatherstrip at the head restraint and finish with the weatherstrips on the sides.

Fig. 326: Cutting New Groove For Grab Handle
Courtesy of VOLVO CARS CORPORATION

NOTE: When replacing the upholstery for the backrest cushion, a new groove must be cut for the grab handle.

Feel behind the upholstery and locate the bracket on the inside. Carefully cut through the upholstery as illustrated. Be extra careful at the ends.

Install:

- the head restraint panel.
- the panel for the grab handle
- 1 screw. Tighten
- the grab handle
- 1 screw. Tighten.

INSTALLING THE OUTER SEAT (SECOND ROW)

Lift in the seat.

Install:

- the 4 M10 screws. Tighten
- the side pieces on the seat.

UPHOLSTERY SEAT CUSHION (THIRD ROW), REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Move the seats on the second row as far forward as possible. Fold down the backrests half way.

REMOVING THE SEAT CUSHION UPHOLSTERY (THIRD ROW)

Fig. 327: Removing Outer Panel (Secured With One Screw)
Courtesy of VOLVO CARS CORPORATION

Remove:

- the handle (release the catch)
- the outer panel (secured with one screw). Pull straight up.

Fig. 328: Identifying Center Storage Compartment With Two Screws
Courtesy of VOLVO CARS CORPORATION

- the center storage compartment (secured with two screws).

Fig. 329: Nut, Screw & Outer Lock
Courtesy of VOLVO CARS CORPORATION

- 1 nut
- 1 screw
- the outer lock.

Fig. 330: Nuts, Screw & Inner Lock
Courtesy of VOLVO CARS CORPORATION

- 1 screw
- the 2 nuts
- the inner lock.

Fig. 331: Pulling Out Seat Cushion
Courtesy of VOLVO CARS CORPORATION

Pull out the seat cushion.

Fig. 332: Detaching Weatherstrips On Underneath Of Seat Cushion
Courtesy of VOLVO CARS CORPORATION

Detach the weatherstrips on the underneath of the seat cushion.

HINT: Use a small groove-cut chisel.

Fig. 333: Sliders On Each Side Of Guide Rail
Courtesy of VOLVO CARS CORPORATION

- the 2 sliders on each side
- the guide rail.

Fig. 334: Removing Upholstery From Cushion By Releasing Clips
Courtesy of VOLVO CARS CORPORATION

- the upholstery / cushion from the seat frame
- the upholstery from the cushion by releasing the 14 clips.

INSTALLING THE SEAT CUSHION UPHOLSTERY (THIRD ROW)

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the upholstery on the cushion using the 14 clips
- the cushion / upholstery on the seat frame.

HINT: Start with the small weatherstrips in the corners.

Install:

- the guide rail
- the slider

- the seat cushion on the seat frame
- the outer lock
- 1 M6 nut
- the 2 M6 screws. Tighten
- the inner lock
- 2 M6 nuts
- 1 M6 screw. Tighten
- the center storage compartment
- the 2 M5 screws. Tighten
- the outer bracket. Press into place
- 1 M6 screw. Tighten.

UPHOLSTERY SEAT CUSHION CENTER (SECOND ROW), REPLACING

REPLACING

As the illustrations in this service information are used for different model years and / or models, some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Fig. 335: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove:

- the battery lead. See **BATTERY, DISCONNECTING**
- the center seat. See **REMOVING THE CENTER SEAT (SECOND ROW)**.

REMOVING THE UPHOLSTERY FROM THE CENTER SEAT CUSHION (SECOND ROW)

Fig. 336: Weatherstrip
Courtesy of VOLVO CARS CORPORATION

Detach the weatherstrip.

Fig. 337: Hooks & Clips
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 2 hooks
- the 2 clips.

Fig. 338: Upholstery Cushion From Seat Frame
Courtesy of VOLVO CARS CORPORATION

- the upholstery / cushion from the seat frame
- the upholstery from the cushion.

Detach the upholstery from the clips in the cushion.

INSTALLING THE UPHOLSTERY ON THE CENTER SEAT CUSHION (SECOND ROW)

Install:

- the upholstery for the cushion
- the upholstery / cushion on the seat frame
- the 2 hooks
- the 2 clips
- the weatherstrip
- the center seat. See **INSTALLING THE CENTER SEAT (SECOND ROW)**.

UPHOLSTERY SEAT CUSHION OUTER (SECOND ROW), REPLACING

REPLACING

The illustrations in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the illustrations is always correct.

PREPARATIONS

Remove the seat. See **REMOVING THE OUTER SEAT (SECOND ROW)**.

REMOVING THE UPHOLSTERY FROM THE OUTER SEAT CUSHION (SECOND ROW)

Fig. 339: Weatherstrip
Courtesy of VOLVO CARS CORPORATION

Remove:

- the weatherstrip.

Fig. 340: Hooks & Clips (One On Each Side)
Courtesy of VOLVO CARS CORPORATION

- the 2 hooks
- the 2 clips (one on each side).

Fold up the upholstery.

Fig. 341: Detaching Upholstery From Clips In Cushion
Courtesy of VOLVO CARS CORPORATION

Remove:

- the upholstery / cushion from the seat frame
- the upholstery from the cushion.

Detach the upholstery from the clips in the cushion.

INSTALLING SERVICE CLIPS

Install the service clips according to: **SERVICE CLIPS, INSTALLING**

INSTALLING THE UPHOLSTERY ON THE OUTER SEAT CUSHION (SECOND ROW), REPLACING

Install:

- the upholstery for the cushion
- the upholstery / cushion on the seat frame
- the weatherstrip.
- the 2 hooks
- the 2 clips (one on each side).

INSTALLING THE OUTER SEAT (SECOND ROW)

NOTE: For tightening torques, see TIGHTENING TORQUE .

Install:

- the seat. See **INSTALLING THE OUTER SEAT (SECOND ROW)**
- the side pieces on the seat.

ACCESSORIES AND EQUIPMENT

Interior - Specifications, Electrical/Electronic

SIGNAL DESCRIPTION

SIGNAL SPECIFICATION, POWER SEAT MODULE

CONNECTING THE BREAKOUT BOX AND CHECKING THE GROUND TERMINALS

It is important that the breakout box is connected according to **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** and the ground terminals are checked according to **CHECKING GROUND POINTS** to before the readings are taken.

POWER SUPPLY

CONNECTOR, BLACK (2-PIN)

Fig. 1: Connector, Black (2-Pin)
Courtesy of VOLVO CARS CORPORATION

Before taking any readings, read, see **CONNECTING THE BREAKOUT BOX AND CHECKING THE GROUND TERMINALS**.

Terminals A1-A2 correspond to terminals 45-46 on the breakout box.

Terminal	Terminal on the breakout box	Signal	Ignition on	Idling	Other
#A1	#45	Battery supply (30), power	U = Ubat	U = Ubat	Passenger compartment fuse 4
#A2	#46	Ground supply	U = Ulow	U = Ulow	-

		(31), power			

SIGNAL SUPPLY

CONNECTOR, BLACK (4-PIN)

Fig. 2: Connector, Black (4-Pin)
Courtesy of VOLVO CARS CORPORATION

Before taking any readings, read, see **CONNECTING THE BREAKOUT BOX AND CHECKING THE GROUND TERMINALS**.

Terminals B1-B4 correspond to terminals 39-42 on the breakout box.

Terminal	Terminal on the breakout box	Signal type	Ignition on	Idling	Other
#B1	#39	Signal supply (Ext X)	U = Ubat	U = Ubat	Passenger compartment fuse 24
#B2	#40	Control modules communication cable (CAN H)	U=1.5-2.0 V	U=1.5-2.0 V	-
#B3	#41	Control modules communication cable (CAN L)	U=1.5-2.0 V	U=1.5-2.0 V	-
#B4	#42	Ground supply (31)	U = Ulow	U = Ulow	-

INPUT SIGNALS FROM THE CONTROL PANEL

CONNECTOR, GREEN (16-PIN)

Fig. 3: Connector, Green (16-Pin)
Courtesy of VOLVO CARS CORPORATION

Before taking any readings, read, see **CONNECTING THE BREAKOUT BOX AND CHECKING THE GROUND TERMINALS**.

Terminals C1-C16 correspond to terminals 25-40 on the breakout box.

Terminal	Terminal on the breakout box	Signal type	Not operated	During operation	Other
#C1	#25	Memory button 2 (2)	U= 5 V	U = Ulow	-
#C2	#26	Memory button 1 (1)	U= 5 V	U = Ulow	-

FROZEN VALUES IN THE POWER SEAT MODULE, DESCRIPTION

EXPLANATION

Not all the parameters described need to be implemented in the control module. This varies from system to system.

Frozen values are parameter values that are stored when a diagnostic trouble code (DTC) is stored.

BATTERY VOLTAGE, VALUE

Measurement range: 0-25.5 V

Normal value when the generator (GEN) is charging: 13.0-14.5 V

DISTANCE, VALUE

Measurement range: 0-1048575 km

The value indicates the total mileage of the car at the time the diagnostic trouble code (DTC) was stored.

PASSENGER COMPARTMENT TEMPERATURE, VALUE

Measurement range: -60 to +195°C

OUTSIDE TEMPERATURE, VALUE

Measurement range: -128 to +127.75°C

ENGINE RUNNING, STATUS

The status displays whether the engine was running when the diagnostic trouble code (DTC) was stored.

No = the engine was not running

Yes = the engine was running

TIME, VALUE

The value displays the time that has passed since the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, MEMORY BUTTON 1

Indicates whether the button for memory button 1 was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, MEMORY BUTTON 2

Indicates whether the button for memory button 2 was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, MEMORY BUTTON 3

Indicates whether the button for memory button 3 was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, PROGRAMMING BUTTON

Indicates whether the button for programming memory functions was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, FRONT-REAR ADJUSTMENT FORWARD (M1+)

Indicates whether the button controlling forward front-rear adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, FRONT-REAR ADJUSTMENT BACKWARD (M1-)

Indicates whether the button controlling backward front-rear adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, BACKREST ADJUSTMENT FORWARD (M2+)

Indicates whether the button controlling forward backrest adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, BACKREST ADJUSTMENT BACKWARD (M2-)

Indicates whether the button controlling backward backrest adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, REAR HEIGHT ADJUSTMENT FORWARD (M3+)

Indicates whether the button controlling upward rear height adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, REAR HEIGHT ADJUSTMENT BACKWARD (M3-)

Indicates whether the button controlling downward rear height adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, FRONT HEIGHT ADJUSTMENT FORWARD (M4+)

Indicates whether the button controlling upward front height adjustment was activated when the diagnostic trouble code (DTC) was stored.

CONTROL PANEL, REAR HEIGHT ADJUSTMENT BACKWARD (M4-)

Indicates whether the button controlling downward front height adjustment was activated when the diagnostic trouble code (DTC) was stored.

ACCESSORIES AND EQUIPMENT

Interior - Symptom Related Diagnostic Procedures

CHECKING BATTERY VOLTAGE

CHECKING BATTERY VOLTAGE

CHECKING SUPPLY

Check passenger compartment fuse 4 (11C/4:2).

Check the cable between power seat connector A terminal 1 and passenger compartment fuse 4 (11C/4:2) for an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS** and also check the connector (54/24:1) for an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS**.

If the fuse has blown fault-trace for a short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS**.

Check passenger compartment fuse 24 (11C/24:2).

Check the cable between power seat supply relay (2/29) terminal 3 and passenger compartment fuse 24 (11C/24:2) for an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS**.

If the fuse has blown fault-trace for a short-circuit to ground according to **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS**.

Check that the relay is not defective.

Check cable between power seat supply relay (2/29) terminal 1 and power seat connector B terminal 1 for a short-circuit to ground, see **SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS** and an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS** and also check connector (54/24:2).

Check cable between power seat connector B terminal 4 and ground and the cable between power seat connector A terminal 2 and ground for a short-circuit to supply voltage, see **SHORT-CIRCUIT TO SUPPLY VOLTAGE. PERMANENT FAULTS** and an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS**.

Remedy as necessary.

Other information:

- For information about connectors/signals, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .
- Breakout box connection, refer to **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .

Fig. 1: Identifying Ohmmeter
Courtesy of VOLVO CARS CORPORATION

Fig. 2: Fuse Holder (Passenger Compartment)
Courtesy of VOLVO CARS CORPORATION

FAULT-TRACING INFORMATION

Condition

Possible Source

- Burnt out fuse
- Open-circuit
- Short-circuit to ground
- Short-circuit to supply voltage.

Fault symptom[s]

- The seat does not function at all.

CHECKING CONTROL BUTTONS

CHECKING THE CONTROL BUTTONS

CHECKING THE CONTROL PANEL

Check if the signal from the control panel is received by the control module.

Read off the value.

HINT: When checking the control panel, check if the resistance between terminal #6C and the terminal pin is 0 ohms. OFF is displayed when there is a short-circuit to supply voltage. ON is displayed when there is a short-circuit to ground.

When operated, the value should oscillate between ON and OFF.

Other information:

- For information about signals, see **INPUT SIGNALS FROM THE CONTROL PANEL**
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX, POWER SEAT MODULE (PSM)** .

Fig. 3: Breakout Box
Courtesy of VOLVO CARS CORPORATION

Fig. 4: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the value change?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACE THE CONTROL PANEL**

REPLACE THE CONTROL PANEL

Replace the control panel. See **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-).

FAULT-TRACING INFORMATION

Condition

No diagnostic trouble codes (DTCs) stored.

Possible Source

- Open-circuit
- Short-circuit to ground
- Short-circuit to supply voltage

Fault symptom[s]

- Automatic seat operation does not function.

CHECKING CURRENT VALUES

CHECKING CURRENT VALUES

NOTE: **It is extremely important that the current level for short-circuit detection is not exceeded if a diagnostic trouble code (DTC) has been generated. If the customer complains that the seat does not function properly at high load or in extreme climates, it is possible to change the maximum current level to the motors.**

Select which motor you wish to program:

1. Motor 1. Refer to **PROGRAMMING A MOTOR**.
2. Motor 2. Refer to **PROGRAMMING A MOTOR**.
3. Motor 3. Refer to **PROGRAMMING A MOTOR**.
4. Motor 4. Refer to **PROGRAMMING A MOTOR**

PROGRAMMING A MOTOR

Read the current level for short-circuit detection and, if necessary, program the current level of the blocked motor by clicking the VCT 2000 symbol.

1. Program another motor. Refer to **CHECKING CURRENT VALUES**.
2. Exit. Troubleshooting has been completed.

Fig. 5: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

PROGRAMMING A MOTOR

Read the current level for short-circuit detection and, if necessary, program the current level of the blocked motor by clicking the VCT 2000 symbol.

1. Program another motor. Refer to **CHECKING CURRENT VALUES**.
2. Exit. Troubleshooting has been completed.

Fig. 6: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

PROGRAMMING A MOTOR

Read the current level for short-circuit detection and, if necessary, program the current level of the blocked motor by clicking the VCT 2000 symbol.

1. Program another motor. Refer to **CHECKING CURRENT VALUES**.
2. Exit. Troubleshooting has been completed.

Fig. 7: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

PROGRAMMING A MOTOR

Read the current level for short-circuit detection and, if necessary, program the current level of the blocked motor by clicking the VCT 2000 symbol.

1. Program another motor. Refer to **CHECKING CURRENT VALUES**.
2. Exit. Troubleshooting has been completed.

Fig. 8: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

CHECKING GROUND LEAD TO CONTROL PANEL

CHECKING GROUND LEAD TO CONTROL PANEL

HINT: None of the control buttons work if there is an open-circuit in the cable.

Check the cable between connector C terminal #6 and ground and terminal #7 and ground. Check for an open-circuit. See **OPEN-CIRCUIT, PERMANENT FAULTS**. Check for a short-circuit to supply voltage. See **SHORT-CIRCUIT TO SUPPLY VOLTAGE. PERMANENT FAULTS**.

Remedy as necessary.

If no fault is found in the wiring replace control panel.

Other information:

- To replace the control panel, see **SIDE PANEL, REPLACING** (-2004) or **SIDE PANEL FRONT SEAT, REPLACING** (2005-)
- For information about connectors/signals, see **INPUT SIGNALS FROM THE CONTROL PANEL** .

Fig. 9: Identifying Ohmmeter
Courtesy of VOLVO CARS CORPORATION

FAULT-TRACING INFORMATION

Condition

Possible Source

- Open-circuit
- Short-circuit to ground
- Short-circuit to supply voltage.

Fault symptom[s]

- Automatic seat operation does not function.

CHECKING PROGRAMMED SEAT VALUES

CHECKING PROGRAMMED SEAT VALUES

The actual values of the seat can be read off and compared with the programmed seat position. The control module derives both the present value and the programmed value from the number of motor revolutions. The control module stores one value per motor.

Memories 1, 2 or 3 can be read off.

Select the memory you wish to compare with the present seat position

1. Memory 1. Refer to **CHECKING PROGRAMMED SEAT VALUES (MEMORY 1)**.
2. Memory 2. Refer to **CHECKING PROGRAMMED SEAT VALUES (MEMORY 2)**.
3. Memory 3. Refer to **CHECKING PROGRAMMED SEAT VALUES (MEMORY 3)**

CHECKING PROGRAMMED SEAT VALUES (MEMORY 1)

If there are no programmed positions there need not be a fault with the seat.

Read off programmed values.

Operate the seat and reprogram the memory.

Compare the current position with the programmed position for each motor.

HINT: If all the values are zero it means that the seat is already in a programmed position. When programming the program value is changed to the present value.

Fig. 10: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the memory function correctly?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING/PROGRAMMING THE CONTROL MODULE**

CHECKING PROGRAMMED SEAT VALUES (MEMORY 2)

If there are no programmed positions there need not be a fault with the seat.

Read off programmed values.

Operate the seat and reprogram the memory.

Compare the current position with the programmed position for each motor.

HINT: If all the values are zero it means that the seat is already in a programmed position. When

programming the program value is changed to the present value.

Fig. 11: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the memory function correctly?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING/PROGRAMMING THE CONTROL MODULE**

CHECKING PROGRAMMED SEAT VALUES (MEMORY 3)

If there are no programmed positions there need not be a fault with the seat.

Read off programmed values.

Operate the seat and reprogram the memory.

Compare the current position with the programmed position for each motor.

HINT: If all the values are zero it means that the seat is already in a programmed position. When programming the program value is changed to the present value.

Fig. 12: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Does the memory function correctly?

- **YES**

  OKAY: Troubleshooting has been completed.

- **NO**

  Refer to **REPLACING/PROGRAMMING THE CONTROL MODULE**

REPLACING/PROGRAMMING THE CONTROL MODULE

Replace/reprogram the control module. See **POWER SEAT MODULE (PSM), REPLACING** (-2004) or **POWER SEAT MODULE (PSM), REPLACING** (2005-).

FAULT-TRACING INFORMATION

Condition

No diagnostic trouble codes (DTCs) are stored in the power seat module.

Possible Source

- A power cut to the seat has erased the seat memory.

Fault symptom[s]

- Automatic seat operation does not function.

CHECKING SUPPLY GROUND LEAD

CHECKING SUPPLY GROUND LEAD

CHECKING WIRING AND COMPONENTS

Check ground leads between power seat and ground according to table below for an open-circuit according to **OPEN-CIRCUIT, PERMANENT FAULTS**.

Check connector.

Fault-trace for a short-circuit to supply voltage if the fuses have blown according to **SHORT-CIRCUIT TO SUPPLY VOLTAGE. PERMANENT FAULTS**.

Connector/Pin	Designation	Connector
B/4	Ground supply (31)	(54/24:12)
A/2	ground supply (31), power	(54/24:7)

Other information:

- For information about connectors/signals, see **SIGNAL SPECIFICATION, POWER SEAT MODULE** .

Fig. 13: Identifying Ohmmeter
Courtesy of VOLVO CARS CORPORATION

OPEN-CIRCUIT, PERMANENT FAULTS

Fig. 14: Checking For Open Circuit
Courtesy of VOLVO CARS CORPORATION

An open-circuit in a cable is indicated by a loss of one or more functions.

Chafed and broken cables or terminals that have come loose are common causes of faults in electrical systems.

Checks:

- Disconnect the connectors at both ends of the cable.

Connect an ohmmeter between the ends of the cable.

The ohmmeter should read approximately 0 ohms if there is no open-circuit in the cable.

Fig. 15: Identifying Control Module Installation
Courtesy of VOLVO CARS CORPORATION

Always check the control module and control module box connectors to ensure that their pins and sockets are not bent or damaged, as this can cause faults.

SHORT-CIRCUIT TO SUPPLY VOLTAGE. PERMANENT FAULTS

Fig. 16: Checking For Short Circuit
Courtesy of VOLVO CARS CORPORATION

A short-circuit between a cable and supply voltage is often indicated by the loss of a function or a fuse blowing when voltage is passed through the cable.

Checks:

- Use a voltmeter to take readings at various points in the circuit while operating switches and sensors.

Voltmeter readings will depend on which circuit is tested and the status of switches and sensors. Use the wiring diagram to determine the correct voltage in the circuit.

Use an ohmmeter between the suspect cables to detect short-circuits between them.

The ohmmeter should read infinite resistance between cables not connected to each other in the circuit.

SHORT-CIRCUIT TO GROUND, PERMANENT FAULTS

Fig. 17: Checking For Short Circuit To Ground
Courtesy of VOLVO CARS CORPORATION

A short-circuit between a live cable and ground is often indicated by the loss of a function or a fuse blowing when a current is passed through the cable.

Checks:

- Activate all switches and sensors in the circuit. Check whether the fuse blows
- Disconnect the connectors in the circuit to ensure that they do not affect readings.

Use an ohmmeter to take a resistance reading between the cable and ground.

The ohmmeter should read infinite resistance if no components are connected.

FAULT-TRACING INFORMATION

Condition

Possible Source

- Open-circuit in the ground lead.

Fault symptom[s]

- The seat does not function at all.

ACCESSORIES AND BODY, CAB

Interior - Symptom Verification

SEAT UPHOLSTERY/PADDING/LOOSE, POOR FIT, WARPED, WRINKLED OR SOFT/HARD

SYMPTOM AND FUNCTION DESCRIPTION

NOTE: The symptom should always be verified together with the customer.

The following tips may be of help to decide if the symptom is due to a product feature or if continued troubleshooting is needed.

HINT: There may be some wrinkles in the upholstery.

ACCESSORIES AND EQUIPMENT

Interior Equipment - Cleaning, Inspection And Adjustment

INTERIOR EQUIPMENT (2005-12)

COOL BOX/CENTER CONSOLE, ADJUSTING

NOTE: **The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.**

REMOVAL

NOTE: **When replacing the center console on vehicles with a cool box/armrest, a cut-out must be made in the rear section of the center console.**

ADJUSTING THE CENTER CONSOLE WITH COOL BOX

Fig. 1: Identifying Plate And Screws
Courtesy of VOLVO CARS CORPORATION

Remove:

- the 3 screws on top (1)
- the 2 screws on the side (2). Detach the plate. (3).

Fig. 2: Identifying Dimension M1, M2 And M3
Courtesy of VOLVO CARS CORPORATION

Saw off the marked area.

M1 = **10 mm** (Measure from the center of the hole to the edge of the marked area)
M2 = **62 mm**
M3 = **24 mm**

Fig. 3: Identifying Center Console (Right-Hand Side)
Courtesy of VOLVO CARS CORPORATION

Seen from the right-hand side.

Fig. 4: Identifying Center Console (Left-Hand Side)
Courtesy of VOLVO CARS CORPORATION

Seen from the left-hand side.

INSTALLATION

INSTALLING THE CENTER TUNNEL CONSOLE

Fig. 5: Identifying Center Tunnel Console
Courtesy of VOLVO CARS CORPORATION

Smooth off the sawn edges.

Install:

- the metal brackets
- the 3 screws on the top. Tighten
- the center tunnel console. See **CENTER CONSOLE, REPLACING**

INTERIOR EQUIPMENT (EXECUTIVE; PREMIER; 2004)

COOL BOX/CENTER CONSOLE, ADJUSTING

see **COOL BOX/CENTER CONSOLE, ADJUSTING**

SEAT BELTS AND OTHER RETENTION SYSTEMS (2003-04)

SEAT BELT FUNCTION, CHECK

NOTE: As the graphics in this service information are used for different model years

and/or models, some variation may occur. However, the essential information in the graphics is always correct.

CHECKING THE FUNCTION OF THE SEATBELT

Fig. 6: Identifying Pulling And Jerking Belt Repeatedly To Check Function
Courtesy of VOLVO CARS CORPORATION

Check that the seat belt (inertia) reel inhibits seat belt movement correctly.

Pull and jerk the belt repeatedly to check the function.

SEAT BELT TENSIONER, CHECKING

NOTE: **The graphics in this service information are used for different model years and / or models. Some variation may occur. However, the essential information in the graphics is always correct.**

CHECKING THE SEAT BELT TENSIONER

CAUTION: When replacing deployed seat belt tensioners, seat belt buckles and end mountings must always be replaced.

Seat belt tensioners can be checked in two different ways:

1. Check for any diagnostic trouble codes (DTCs) using VIDA
2. Physical check as follows.

NOTE: Third row seat belt tensioners cannot be checked physically, only via VIDA (Volvo scan tool).

Fig. 7: Identifying Piston Positions
Courtesy of VOLVO CARS CORPORATION

Insert a wire in the pipe on the seat belt tensioner as shown.

Check the piston position in the seat belt tensioner.

Piston position A:

The seat belt tensioner has deployed. Replace both the seat belt (inertia) reels and the seat belt tensioners. See **SEAT BELT FRONT, REPLACING** .

Piston position B:

The seat belt tensioner has not deployed. No corrective action is required.

NOTE: If any airbag has deployed, all seat belts and tensioners must be replaced.

SUPPLEMENTARY RESTRAINT SYSTEM (SRS), INSPECTION

NOTE: As the graphics in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the graphics is always correct.

INSPECTING THE SRS (SUPPLEMENTAL RESTRAINT SYSTEM)

Fig. 8: Identifying SRS Indicator Lamp
Courtesy of VOLVO CARS CORPORATION

The ignition must be in position II.

Install the battery negative lead.

Check that the SRS indicator lamp is not defective by turning the key to position II.

The SRS indicator lamp must light and go out after approximately seven seconds.

Check that the SRS indicator lamp in the combined instrument panel is not constantly lit. Fault-trace the supplementary restraint system (SRS) if the lamp is constantly lit.

WHIPLASH UNIT, CHECKING

NOTE: **As the graphics in this service information are used for different model years and/or models, some variation may occur. However, the essential information in the graphics is always correct.**

NOTE: **The WHIPS unit must be checked after every collision.**

NOTE: **The graphic shows the left end mounting. The right end mounting is the mirror image.**

Fig. 9: Backrest Folded Back
Courtesy of VOLVO CARS CORPORATION

The nut always faces the center of the seat.

(A) = reference mark. Always the second outermost section of the WHIPS mounting.

(B) = deformation element in the WHIPS mounting.

Fold the backrest backwards.

Fig. 10: Checking That Marking/Edge Of Deformation Element Is Not In Front Of Reference Mark
Courtesy of VOLVO CARS CORPORATION

Check that the marking/edge of the deformation element (B) is not in front of the reference mark (A) as shown.

If the deformation section (B) is in front of the reference mark (A), the deformation element must be replaced. See **WHIPLASH UNIT, REPLACING** .

NOTE: The deformation element must always be replaced if it is deformed.

NOTE: Always check both the right and left-hand sides of both the front seats.

SEAT BELTS AND OTHER RETENTION SYSTEMS (2005-06)

CONTACT REEL DRIVER MODULE, RESETTING

NOTE: The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in

the graphics is always correct.

PREPARATIONS

Fig. 11: Disconnecting Battery Lead
Courtesy of VOLVO CARS CORPORATION

Remove:

- battery cable. See **BATTERY, DISCONNECTING**
- the steering wheel according to **STEERING WHEEL, REPLACING** .

RELEASE CONTACT REEL

Fig. 12: Identifying Removal Of One Torx 20 Screw
Courtesy of VOLVO CARS CORPORATION

Remove one screw (Torx 20).

Fig. 13: Identifying Contact Reel Turned Counter-Clockwise Two Entire Turns
Courtesy of VOLVO CARS CORPORATION

Turn the contact reel counter-clockwise to the end-position.

Fig. 14: Identifying Contact Reel Turned Clockwise To Limit Position
Courtesy of VOLVO CARS CORPORATION

Turn the contact reel clockwise two complete revolutions. Then turn clockwise until the screw hole is in position "one o'clock" as shown.

NOTE: On later car models, the yellow marking must also be visible in the window.

SECURE CONTACT REEL

Fig. 15: Identifying Installation Of Screw
Courtesy of VOLVO CARS CORPORATION

Install the screw when the contact reel is in its lock position.

The contact reel is now reset and locked (secured).

INSTALLATION

Install:

- the steering wheel according to **STEERING WHEEL, REPLACING**
- the battery cable according to **BATTERY, DISCONNECTING** .

SEAT BELT FUNCTION, CHECK

see **SEAT BELT FUNCTION, CHECK**

SEAT BELT TENSIONER, CHECKING

see **SEAT BELT TENSIONER, CHECKING**

SUPPLEMENTARY RESTRAINT SYSTEM (SRS), INSPECTION

see **SUPPLEMENTARY RESTRAINT SYSTEM (SRS), INSPECTION**

WHIPLASH UNIT, CHECKING

NOTE: The graphics in this service information are used for different model years and/or models. Some variation may occur. However, the essential information in the graphics is always correct.

METHOD CONTENT

This method consists of:

- see **NON-RECLINING SEAT**
- see **RECLINING SEAT**

NON-RECLINING SEAT

CHECKING NON-RECLINING SEAT

Fig. 16: Identifying Side Panel's Leading Edge And Trailing Edge
Courtesy of VOLVO CARS CORPORATION

Run/push ahead the seat.

Raise the seat maximally at the trailing edge

Remove the screw on the inside at the side panel's leading edge (1).

Pull the side panel straight up at the trailing edge (2).

Fold aside the side panel.

Fig. 17: Identifying Seat Belt Fitting And Catch
Courtesy of VOLVO CARS CORPORATION

Loosen the seatbelt from the seatbelt fitting by pressing in the catch.

Fig. 18: Identifying Screw And Protective Cover
Courtesy of VOLVO CARS CORPORATION

Remove:

- the screw
- the protective cover.

Check the whiplash unit by the rivet on the side of the seat.

Fig. 19: Identifying Whiplash Unit Rivet
Courtesy of VOLVO CARS CORPORATION

If there is no visible space between the rivet and the fitting, then the whiplash unit is functional.

Install in the reverse order.

Fig. 20: Identifying Visible Space Between Rivet And Fitting
Courtesy of VOLVO CARS CORPORATION

If there is a visible space between the rivet and the fitting, then the whiplash elements on both sides of the seat shall be replaced acc. to **WHIPLASH UNIT, REPLACING (2009-12)** .

RECLINING SEAT

CHECKING RECLINING SEAT

Fig. 21: Identifying Reclining Seat
Courtesy of VOLVO CARS CORPORATION

Run/push the seat to its rearmost position.

Run/screw the seat to its forward position.

Fold the seat back completely forward.

Run/screw the seat back backwards so that the seat rises at the trailing edge.

Check the whiplash unit by the rivet in the seat's trailing edge.

Fig. 22: Identifying Whiplash Unit Rivet
Courtesy of VOLVO CARS CORPORATION

If there is no visible space between the rivet and the fitting, then the whiplash unit is functional.

Install in the reverse order.

Fig. 23: Identifying Visible Space Between Rivet And Fitting
Courtesy of VOLVO CARS CORPORATION

If there is a visible space between the rivet and the fitting, then the whiplash elements on both sides of the seat shall be replaced acc. to **WHIPLASH UNIT, REPLACING (2009-12)** .

SEAT BELTS AND OTHER RETENTION SYSTEMS (2007-12)

COLLISION PROTECTION UNIT FROM BEHIND FRONT SEAT CHECK

Fig. 24: Identifying Front Seat
Courtesy of VOLVO CARS CORPORATION

Only applies to vehicle with fixed backrest.

Remove the following items:

- Side panel. See **SIDE PANEL FRONT SEAT, REPLACING**
- end-plate. See **END MOUNTING, REPLACING** .

Fig. 25: Identifying Front Seat Rivet
Courtesy of VOLVO CARS CORPORATION

Fig. 26: Identifying Front Seat Rivet And End-Plate
Courtesy of VOLVO CARS CORPORATION

CAUTION: The operation must be performed on both sides of the seat.

CAUTION: No visible space may be seen between the rivet and end-plate.

Fig. 27: Identifying Visible Space Between Rivet And End-Plate
Courtesy of VOLVO CARS CORPORATION

In case of visible space between the rivet and end-plate, the rear end collision module for front seat shall be replaced, see **COLLISION PROTECTION UNIT FROM BEHIND FRONT SEAT (2007-12)** .

Fig. 28: Identifying Front Seat Backrest
Courtesy of VOLVO CARS CORPORATION

Only applies to vehicle with foldable backrest.

Fig. 29: Identifying Backrest Angle
Courtesy of VOLVO CARS CORPORATION

Adjust the backrest angle until the unit is visible.

Fig. 30: Identifying Rivet And End-Plate
Courtesy of VOLVO CARS CORPORATION

CAUTION: The operation must be performed on both sides of the seat.

CAUTION: No visible space may be seen between the rivet and end-plate.

Fig. 31: Identifying Visible Space Between Rivet And End-Plate
Courtesy of VOLVO CARS CORPORATION

CAUTION: In case of visible space between the rivet and end-plate, the rear end collision module for front seat shall be replaced, see COLLISION PROTECTION UNIT FROM BEHIND FRONT SEAT (2007-12)

To install, reverse the removal procedure

CONTACT REEL DRIVER MODULE, RESETTING

see **CONTACT REEL DRIVER MODULE, RESETTING**

SEAT BELT FUNCTION, CHECK

see **SEAT BELT FUNCTION, CHECK**

SEAT BELT TENSIONER, CHECKING

SUPPLEMENTARY RESTRAINT SYSTEM (SRS), INSPECTION

see **SUPPLEMENTARY RESTRAINT SYSTEM (SRS), INSPECTION**

INTERIOR EQUIPMENT (2007-12)

COMPASS, CALIBRATION

SETTING THE GEOGRAPHICAL AREA

Switch on the ignition.

Fig. 32: Identifying Compass Button
Courtesy of VOLVO CARS CORPORATION

Press in the button for at least 3 seconds. The figure for the set range (1-15) is then displayed.

Fig. 33: Identifying Canada
Courtesy of VOLVO CARS CORPORATION

Fig. 34: Identifying USA
Courtesy of VOLVO CARS CORPORATION

CALIBRATING THE COMPASS

Fig. 35: Identifying Compass (CAL)
Courtesy of VOLVO CARS CORPORATION

NOTE: The compass must be calibrated when the rear view mirror is replaced or when CAL appears in the display.

Find a large open space, free of traffic.

Start the vehicle.

Press in the button for at least 6 seconds. **CAL** should appear in the display.

Then drive at a maximum of 8 km/h in a circle (2-3 times) until the compass direction is displayed in the display again.

CALIBRATING THE SPECIAL TOOL (2003-04)

CALIBRATION

Special tools:

see **9511506**

see **9513022**

see **9988695**

see **9194732**

see **8618437**

It is important that the special tool is operating correctly when fault-tracing and inspecting the SRS system. A defective special tool will cause the on-board diagnostic (OBD) system to give false readings and will make fault-tracing and checking more difficult.

Ensure that the special tool is fault free by calibrating it or checking it before use.

Calibrate tools see **9511506** , see **9513022** or see **9988695** as follows:

- Use an ohmmeter to read off the resistance in the special tool
- Connect the ohmmeter test probes to the terminal pin on the special tool
- The ohmmeter must read between 1.8 and 2.5 ohms
- If the ohmmeter gives a different reading or if the tool is damaged, scrap the tool and replace it with a new one.

Check tools see **9194732** and see **8618437** by carrying out visual checks. If damaged, discard the tool and replace with a new one.

ACCESSORIES AND BODY, CAB

Interior Equipment - Diagnostic Trouble Codes and Associated Procedures

SRS-0135: BELT TENSIONER 3RD ROW LEFT. CIRCUIT FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0135

Condition

NOTE: **If there are other diagnostic trouble codes, that indicate the same component, stored in the Supplemental restraint system module (SRS) then these shall be taken care of first.**

Fig. 1: Identifying Seat Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

The Supplemental restraint system module (SRS) checks the circuit for the seat belt tensioner, 3rd row left.

The diagnostic trouble code (DTC) is stored if the control module detects that:

- There is interference in the circuit.
- Contact with the impact protection's ignition part is interrupted.

The control module's test for the diagnostic trouble code (DTC) starts in the event of:

- Ignition position I, II and III. Only during start-up of the supplemental restraint system.

NOTE: **The control module can only detect the fault once the test has been started and the diagnostic trouble code (DTC) is stored when the conditions are met.**

Substitute Value

- None.

Possible Source

- Contact resistance, oxidation or poor contact in connections.
- Damaged supplemental restraint system module (SRS).

Fault symptom[s]

- The SRS indicator lamp is lit.

CIRCUIT ERROR

CHECKING THE WIRING

Fig. 2: Identifying Ignition In Off Position
Courtesy of VOLVO CARS CORPORATION

Fig. 3: Identifying Microphone Connectors
Courtesy of VOLVO CARS CORPORATION

- Ignition off, wait for 15 seconds.
- Disconnect the connector from the left-hand 3rd row seat belt tensioner.
- Disconnect the connector for Supplemental restraint system module (SRS).

> WARNING: **Under no circumstances use an ohmmeter or other live measuring instrument to take readings on a disconnected non-deployed seat belt tensioner. This could deploy the seat belt tensioner**

Check connectors for damage to pins and connections.

Check the connectors. Check for loose connections. Check for contact resistance. Check for oxidation.

Also check other connectors and terminals that connect the wiring between the Supplemental restraint

system module (SRS) and the seat belt tensioner.

Check the cable. Check for loose connections. Check for an open-circuit. Check for a short-circuit to ground. Check for a short-circuit to supply voltage.

Take readings between:

- Supplemental restraint system module (SRS) terminal #12A/12(12) and the connector to seat belt tensioner. 3rd row, left, terminal #1.
- Supplemental restraint system module (SRS) terminal #12A/12(12) and the connector to seat belt tensioner. 3rd row, left, terminal #1.

Remedy as necessary.

FAULT-TRACING INFORMATION

In case of this defect, troubleshooting is not followed by verification.

The information can be displayed again or the fault-tracing for this fault can be interrupted.

SRS-0136: BELT TENSIONER 3RD ROW RIGHT. CIRCUIT FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0136

Condition

NOTE: **If there are other diagnostic trouble codes, that indicate the same component, stored in the Supplemental restraint system module (SRS) then these shall be taken care of first.**

Fig. 6: Identifying Seat Belt Tensioner
Courtesy of VOLVO CARS CORPORATION

The Supplemental restraint system module (SRS) checks the circuit for the seat belt tensioner, 3rd row right.

The diagnostic trouble code (DTC) is stored if the control module detects that:

- There is interference in the circuit.
- Contact with the impact protection's ignition part is interrupted.

The control module's test for the diagnostic trouble code (DTC) starts in the event of:

- Ignition position I, II and III. Only during start-up of the supplemental restraint system.

NOTE: The control module can only detect the fault once the test has been started and the diagnostic trouble code (DTC) is stored when the conditions are met.

Substitute Value

- None.

Possible Source

- Contact resistance, oxidation or poor contact in connections.
- Damaged supplemental restraint system module (SRS).

Fault symptom[s]

- The SRS indicator lamp is lit.

CIRCUIT ERROR

CHECKING THE WIRING

Fig. 7: Identifying Ignition In Off Position
Courtesy of VOLVO CARS CORPORATION

Fig. 8: Identifying Microphone Connectors
Courtesy of VOLVO CARS CORPORATION

- Ignition off, wait for 15 seconds.
- Disconnect the connector from the right-hand 3rd row seat belt tensioner.
- Disconnect the connector for Supplemental restraint system module (SRS).

WARNING: Under no circumstances use an ohmmeter or other live measuring instrument to take readings on a disconnected non-deployed seat belt tensioner. This could deploy the seat belt tensioner

Check connectors for damage to pins and connections.

Check the connectors. Check for loose connections. Check for contact resistance. Check for oxidation.

Also check other connectors and terminals that connect the wiring between the Supplemental restraint system module (SRS) and the seat belt tensioner.

Check the cable. Check for loose connections. Check for an open-circuit. Check for a short-circuit to ground. Check for a short-circuit to supply voltage.

Take readings between:

- Supplemental restraint system module (SRS) terminal #13C/69(9) and the connector to seat belt tensioner. 3rd row, right, terminal #1.
- Supplemental restraint system module (SRS) #14C/70(10) and the connector to seat belt tensioner. 3rd row, right, #3.

Remedy as necessary.

INFORMATION

FAULT-TRACING INFORMATION

In case of this defect, troubleshooting is not followed by verification.

The information can be displayed again or the fault-tracing for this fault can be interrupted.

SRS-013A: CONTROL MODULE. INTERNAL FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-013A

Condition

Fig. 26: Identifying SRS Control Module
Courtesy of VOLVO CARS CORPORATION

Diagnostic trouble code (DTC) SRS-013A is stored if the Supplemental Restraint System Module (SRS) registers an internal fault.

Diagnostic trouble code (DTC) SRS-013A can only be diagnosed when you switch from ignition position 0 to ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Internal fault in the SRS control module.

Fault symptom[s]

- The SRS indicator lamp is lit.

WARNING: **There is a risk that the SRS system will not function if this diagnostic trouble code (DTC) is stored.**

NOTE: **In the event of an internal fault, the diagnostic trouble code (DTC) must not be erased. The SRS control module must be returned to Volvo according to standard procedures.**

INTERNAL FAULT

INTERNAL FAULT

The SRS control module has registered an internal fault.

CAUTION: A new SRS control module is delivered without software. The control module must be programmed in order to function after replacement.

For further information about programming and replacing the SRS control module, see **SUPPLEMENTAL RESTRAINT SYSTEM MODULE (SRS), REPLACING** .

Fig. 27: Identifying SRS Control Module
Courtesy of VOLVO CARS CORPORATION

SRS-013B: CONTROL MODULE. INTERNAL FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-013B

Condition

Fig. 28: Identifying SRS Control Module
Courtesy of VOLVO CARS CORPORATION

Diagnostic trouble code (DTC) SRS-013B is stored if the Supplemental Restraint System Module (SRS) registers an internal fault.

Diagnostic trouble code (DTC) SRS-013B can only be diagnosed when you switch from ignition position 0 to ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Internal fault in the supplemental restraint system module (SRS)
- Weak battery in the vehicle when programming a control module.

Fault symptom[s]

- The SRS indicator lamp is lit.

WARNING: There is a risk that the SRS system will not function if this diagnostic trouble code (DTC) is stored.

INTERNAL FAULT

INTERNAL FAULT

NOTE: This diagnostic trouble code (DTC) may be stored after programming one of the vehicle control modules. If this has occurred, the control module must only be reprogrammed. The control module must not be replaced.

The battery must be fully charged before reprogramming is carried out

If the diagnostic trouble code (DTC) has been stored previously, the entire control module must be replaced.

The supplemental restraint system module (SRS) has registered an internal fault.

CAUTION: A new supplemental restraint system module (SRS) is delivered without software. The control module must be programmed in order to function after replacement.

For further information about programming and replacing the supplemental restraint system module (SRS):**SUPPLEMENTAL RESTRAINT SYSTEM MODULE (SRS), REPLACING**

Fig. 29: Identifying SRS Control Module
Courtesy of VOLVO CARS CORPORATION

SRS-020C: AOS. CONFIGURATION FAULT (2003-2004)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-020C

Condition

Fig. 30: Identifying SRS Control Module
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal in the control area network (CAN) bus.

Diagnostic trouble code (DTC) SRS-020C is stored if the parameter file in the Supplemental Restraint System Module (SRS) and in the central electronic module (CEM) (car config) for the parameter "with or without AOS" do not correspond.

Diagnostic trouble code (DTC) SRS-020C can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Incorrect car configurations in the central electronic module (CEM) or incorrect parameter files in the SRS system
- Car configurations in the central electronic module (CEM) or parameter files in the SRS system.

Fault symptom[s]

- The SRS indicator lamp is lit.

CONFIGURATION FAULT

CHECKING THE COMPONENT

Fig. 31: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 32: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Switch on the ignition. Wait 20 seconds.

  Read off the parameter "with or without AOS" for the central electronic module (CEM) and for the Supplemental Restraint System Module (SRS). Check that the parameter value is the same for the central electronic module (CEM) as for the Supplemental Restraint System Module (SRS).

  If the parameter value is not the same for the Supplemental Restraint System Module (SRS) as for the central electronic module (CEM). Note the difference for reporting purposes.

Fig. 33: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

SRS-0210: FRONT RIGHT FRONT IMPACT SENSOR. FAULTY SIGNAL (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0210

Condition

Fig. 34: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-0210 is stored if the control module registers an incorrect signal, i. e. that the signal in the signal cable is too low or too high for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-0210 can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Short-circuit to supply voltage in the signal cable between the front right front impact sensor and the Supplemental Restraint System Module (SRS)
- Short-circuit to ground in the signal cable between the front right front impact sensor and the Supplemental Restraint System Module (SRS)
- Short-circuit to supply voltage in the connector
- Short-circuit to ground in the connector
- Short-circuit to ground in the connector

- Short-circuit between signal cables to the front impact sensor from the Supplemental Restraint System Module (SRS)
- Short-circuit in the front impact sensor (defective front impact sensor).

Fault symptom[s]

- The SRS indicator lamp is lit.

FAULTY SIGNAL

CHECKING THE COMPONENT

Fig. 35: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 36: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector from the front right front impact sensor.

  Check the female and male parts of the connectors for the Supplemental Restraint System Module (SRS) and the front impact sensor. The cable terminals must not be damaged or pressed back.

  Check the signal cable between the Supplemental Restraint System Module (SRS) terminals #21B (49), #20B (48) and terminals #1 and #2 on the front impact sensor. Check for a short-circuit to supply voltage. Check for a short-circuit to ground

  Check the resistance in the signal cable between terminals #21B (49) and #20B (48) for the Supplemental Restraint System Module (SRS). The resistance must be infinite.

If no fault is found, replace the front collision sensor.

Remedy as necessary.

Other information:

- To access or replace the front impact sensor, see **COLLISION SENSOR FRONT, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**
- For information about the repair of SRS wiring, see **CABLE HARNESS SRS SYSTEM, REPAIR**
- see **CHECKING WIRING AND TERMINALS** .

Fig. 37: Identifying Ohm Meter

Fig. 38: Identifying Front Impact Sensor Connector Terminals
Courtesy of VOLVO CARS CORPORATION

- **Continue**

  See: **VERIFICATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

VERIFICATION

VERIFICATION

HINT: After carrying out the repair, check that the fault has been remedied.

Fig. 39: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the battery negative lead
- Reinstall the connectors, components etc.
- Ignition on
- Connect the battery negative lead.

WARNING: There must not be anyone inside the passenger compartment when the battery is connected.

- Read off diagnostic trouble codes (DTCs).

The fault is no longer present if the diagnostic trouble code (DTC) status is intermittent.

Fig. 40: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Is the diagnostic trouble code (DTC) intermittent?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  See: **INFORMATION**

SRS-0211: FRONT RIGHT FRONT IMPACT SENSOR. COMMUNICATION FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0211

Condition

Fig. 41: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-0211 is stored if the control module registers a communication fault in the signal cable for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-0211 can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Contact resistance or open-circuit in the signal cable between the front right front impact sensor and the Supplemental Restraint System Module (SRS)
- Open-circuit in the front impact sensor (defective front impact sensor).

Fault symptom[s]

- The SRS indicator lamp is lit.

COMMUNICATION FAULT

CHECKING THE COMPONENT

Fig. 42: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 43: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector from the front right front impact sensor.

  Check the female and male parts of the connectors for the Supplemental Restraint System Module (SRS) and the front impact sensor. The cable terminals must not be damaged, pressed back or oxidized.

  Connect special tool see **9512887** to the front impact sensor.

  Check the resistance between terminal #21B (49) and #20B(48) on the Supplemental Restraint System Module (SRS). The resistance should be 10Kohms.

  Remedy as necessary.

Other information:

- To access or replace the front impact sensor, see **COLLISION SENSOR FRONT, REPLACING**

  See: **INFORMATION**

SRS-0212: FRONT RIGHT FRONT IMPACT SENSOR. FAULTY IDENTIFICATION (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0212

Condition

Fig. 51: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-00212 is stored if the control module registers an incorrect identification of signal in the signal cable for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-0212 can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Faulty front impact sensor installed in the Supplemental Restraint System Module (SRS)
- The signal between the front impact sensor and the Supplemental Restraint System Module (SRS) has been affected by electrical interference. This causes the front impact sensor to respond with an incorrect identification signal.

Fault symptom[s]

- The SRS indicator lamp is lit.

INCORRECT IDENTIFICATION

REPLACING THE COMPONENT

Supplemental Restraint System Module (SRS) has registered that an incorrect front impact sensor model has been installed.

If this fault occurs, replace the front right front impact sensor. Check against the replacement parts catalogue which front impact sensor model is used in the relevant Supplemental Restraint System Module (SRS).

In the event of a permanent fault, replace the front impact sensor. See **COLLISION SENSOR FRONT, REPLACING** .

Remedy as necessary.

SRS-0213: FRONT RIGHT FRONT IMPACT SENSOR. INTERNAL FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0213

Condition

Fig. 52: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-0213 is stored if the control module registers an internal fault in the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-0213 can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Internal fault in the front right front impact sensor.

Fault symptom[s]

- The SRS indicator lamp is lit.

INTERNAL FAULT

INTERNAL FAULT

The control module has registered an internal fault in the front right front impact sensor.

In the event of a permanent and intermittent fault, replace the front impact sensor. See **COLLISION SENSOR FRONT, REPLACING** .

Remedy as necessary.

SRS-0214: FRONT RIGHT FRONT IMPACT SENSOR. CONFIGURATION FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0214

Condition

Fig. 53: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-0214 is stored if the resistance in the signal cable wiring circuit is lower than 10 ohms for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-0214 can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- If the Supplemental Restraint System Module (SRS) identifies that a front right front impact sensor is installed, despite the control module being programmed that a front impact sensor is not installed.

Fault symptom[s]

- The SRS indicator lamp is lit.

FAULT-TRACING

see **FAULT-TRACING**

SRS-0215: FRONT RIGHT FRONT IMPACT SENSOR. CROSS-CONNECTED (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0215

Condition

Fig. 54: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front right front impact sensor.

Diagnostic trouble code (DTC) SRS-0215 is stored if the control module registers that the signal cable is cross-connected.

The diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched on (12 V). In other words, the diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched from position 0 to positions I, II or III.

Substitute Value

- None.

Possible Source

- Incorrect connection of the signal cables between the front right front impact sensor and the Supplemental Restraint System Module (SRS). The signal cables are reversed between the two terminal pins in the front impact sensor or in the Supplemental Restraint System Module (SRS)
- Incorrect repair of SRS wiring. The signal cables to the two terminal pins on the front impact sensor have been reversed.

Fault symptom[s]

- The SRS indicator lamp is lit.

CROSS-CONNECTED

CHECKING COMPONENTS AND WIRING

Fig. 55: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 56: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector from the front right front impact sensor.

  Check the signal cable between the Supplemental Restraint System Module (SRS) terminal #21B (49) and the front impact sensor #1. Check for an open-circuit.

  Check the signal cable between the Supplemental Restraint System Module (SRS) terminal #20B (48) and the front impact sensor #2. Check for an open-circuit.

  Check the resistance between the Supplemental Restraint System Module (SRS) terminal #21B (49) and the front impact sensor #2. The resistance should be infinite.

  Check the resistance between the Supplemental Restraint System Module (SRS) terminal #20B (48) and

the front impact sensor #1. The resistance should be infinite.

HINT: If repairs have been carried out on the wiring, these signal cables may have been reversed. Check that connections between the Supplemental Restraint System Module (SRS) and the front impact sensor are correct.

Remedy as necessary.

Other information:

- To access and replace the SRS control module and connector, see **SUPPLEMENTAL RESTRAINT SYSTEM MODULE (SRS), REPLACING**
- To connect the breakout box, see **CONNECTING THE BREAKOUT BOX**
- To access or replace the front right front impact sensor, see **COLLISION SENSOR FRONT, REPLACING**
- For information about the repair of SRS wiring, see **CABLE HARNESS SRS SYSTEM, REPAIR**
- For information about signals, see **SIGNAL SPECIFICATION**

- Ignition off
- Disconnect the battery negative lead
- Reinstall the connectors, components etc.
- Ignition on
- Connect the battery negative lead.

WARNING: There must not be anyone inside the passenger compartment when the battery is connected.

- Read off diagnostic trouble codes (DTCs).

The fault is no longer present if the diagnostic trouble code (DTC) status is intermittent.

Fig. 60: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Is the diagnostic trouble code (DTC) intermittent?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  See: **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

SRS-0218: FRONT LEFT FRONT IMPACT SENSOR. FAULTY SIGNAL (2003-

2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0218

Condition

Fig. 61: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front left front impact sensor.

Diagnostic trouble code (DTC) SRS-0218 is stored if the control module registers an incorrect signal, i. e. that the signal in the signal cable is too low or too high for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-0218 can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Short-circuit to supply voltage in the signal cable between the front left front impact sensor and the

Supplemental Restraint System Module (SRS)

- Short-circuit to ground in the signal cable between the front impact sensor and the Supplemental Restraint System Module (SRS)
- Short-circuit to supply voltage in the connector
- Short-circuit to ground in the connector
- Short-circuit between signal cables to the front impact sensor from the Supplemental Restraint System Module (SRS)
- Short-circuit in the front impact sensor (defective front impact sensor).

Fault symptom[s]

- The SRS indicator lamp is lit.

FAULTY SIGNAL

CHECKING THE COMPONENT

Fig. 62: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 63: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector from the front left front impact sensor.

  Check the female and male parts of the connectors for the Supplemental Restraint System Module (SRS) and the front impact sensor. The cable terminals must not be damaged or pressed back.

  Check the cable between the Supplemental Restraint System Module (SRS) terminal #19B (47), #18B (46) and connector terminals #2 and #1 on the front left front impact sensor. Check for a short-circuit to supply voltage. Check for a short-circuit to ground.

  Check the resistance in the signal cable between terminals #19B (47) and #18B (46) for the Supplemental Restraint System Module (SRS). The resistance must be infinite.

If no fault is found, replace the front collision sensor.

Remedy as necessary.

Other information:

- To access or replace the front impact sensor, see **COLLISION SENSOR FRONT, REPLACING**
- For information about signals, see **SIGNAL SPECIFICATION**

  See: **INFORMATION**

SRS-0219: FRONT LEFT FRONT IMPACT SENSOR COMMUNICATION FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0219

Condition

Fig. 68: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front left front impact sensor.

Diagnostic trouble code (DTC) SRS-0219 is stored if the control module registers a communication fault in the signal cable for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-0219 can be diagnosed when the ignition is on.

Substitute Value

- None.

Possible Source

- Contact resistance or open-circuit in the signal cable between the front left front impact sensor and the Supplemental Restraint System Module (SRS)
- Open-circuit in the front impact sensor (defective front impact sensor).

Fault symptom[s]

- The SRS indicator lamp is lit.

COMMUNICATION FAULT

CHECKING THE COMPONENT

Fig. 69: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 70: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off
- Disconnect the connector from the front left front impact sensor.

  Check the female and male parts of the connectors for the Supplemental Restraint System Module (SRS) and the front impact sensor. The cable terminals must not be damaged, pressed back or oxidized.

  Connect special tool see **9512887** to the front impact sensor.

  Check the resistance between terminal #19B (47) and #18B(46) on the Supplemental Restraint System Module (SRS). The resistance should be 10Kohms.

  HINT: If the fault is permanent and no fault is found, replace the front impact sensor.

Remedy as necessary.

Other information:

- To access or replace the front impact sensor, see **COLLISION SENSOR FRONT, REPLACING**

SRS-021A: FRONT LEFT FRONT IMPACT SENSOR. FAULTY IDENTIFICATION (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-021A

Condition

Fig. 78: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front left front impact sensor.

Diagnostic trouble code (DTC) SRS-0021A is stored if the control module registers an incorrect identification signal in the signal cable for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-021A can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Faulty front impact sensor installed in the Supplemental Restraint System Module (SRS)
- The signal between the front impact sensor and the Supplemental Restraint System Module (SRS) has been affected by electrical interference. This causes the front impact sensor to respond with an incorrect identification signal.

Fault symptom[s]

- The SRS indicator lamp is lit.

FAULTY IDENTIFICATION

CHECKING THE COMPONENT

Fig. 79: Identifying Ignition ON
Courtesy of VOLVO CARS CORPORATION

Fig. 80: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off for 10 seconds
- Switch on the ignition. Wait 10 seconds.

  Read off diagnostic trouble codes (DTCs).

  If the diagnostic trouble code (DTC) is intermittent, the fault has been eliminated.

  Other information:

  - To access or replace the front impact sensor, see **COLLISION SENSOR FRONT, REPLACING** .

Fig. 81: Identifying VCT2000 Diagnostic Tool Symbol In VIDA
Courtesy of VOLVO CARS CORPORATION

Is the diagnostic trouble code (DTC) intermittent?

- **NO**

  See: **CHECKING THE COMPONENT**

- **YES**

  OKAY: Troubleshooting has been completed.

CHECKING THE COMPONENT

Supplemental Restraint System Module (SRS) has registered that an incorrect front impact sensor model has been installed.

If this fault occurs, replace the front left front impact sensor. Check against the replacement parts catalogue which front impact sensor model is used in the relevant Supplemental Restraint System Module (SRS)

In the event of a permanent fault, replace the front impact sensor.

Remedy as necessary.

Other information:

- To access or replace the front impact sensor, see **COLLISION SENSOR FRONT, REPLACING** .

SRS-021B: FRONT LEFT FRONT IMPACT SENSOR. INTERNAL FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-021B

Condition

Fig. 84: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front left front impact sensor.

Diagnostic trouble code (DTC) SRS-021B is stored if the control module registers an internal fault in the front impact sensor.

Diagnostic trouble code (DTC) SRS-021B can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- Internal fault in the front impact sensor.

Fault symptom[s]

- The SRS indicator lamp is lit.

INTERNAL FAULT

INTERNAL FAULT

An internal fault has been registered in the front left front impact sensor.

In the event of permanent and intermittent faults, replace the front left front impact sensor. See **COLLISION SENSOR FRONT, REPLACING** .

Remedy as necessary.

SRS-021C: FRONT LEFT FRONT IMPACT SENSOR. CONFIGURATION FAULT (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-021C

Condition

Fig. 85: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front left front impact sensor.

Diagnostic trouble code (DTC) SRS-021C is stored if the resistance in the signal cable wiring circuit is lower than 10 ohms for longer than 10 seconds.

Diagnostic trouble code (DTC) SRS-021C can be diagnosed in ignition positions I, II or III.

Substitute Value

- None.

Possible Source

- If the Supplemental Restraint System Module (SRS) identifies that a front impact sensor is installed, despite the control module being programmed that a front left front impact sensor is not installed.

Fault symptom[s]

- The SRS indicator lamp is lit.

FAULT-TRACING

see **FAULT-TRACING**

SRS-021D: FRONT LEFT FRONT IMPACT SENSOR. CROSS-CONNECTED (2003-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-021D

Condition

Fig. 86: Identifying Front Right Front Impact Sensor
Courtesy of VOLVO CARS CORPORATION

The Supplemental Restraint System Module (SRS) checks the signal from the front left front impact sensor.

Diagnostic trouble code (DTC) SRS-021D is stored if the Supplemental Restraint System Module (SRS) registers that the signal cable is cross-connected

The diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched on (12 V). In other words, the diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched from position 0 to positions I, II or III.

Substitute Value

- None.

Possible Source

- Incorrect connection of the signal cables between the front left front impact sensor and the Supplemental Restraint System Module (SRS). The signal cables are reversed between the two terminal pins in the side impact sensor or in the Supplemental Restraint System Module (SRS)
- Incorrect repair of SRS wiring. The signal cables to the two terminal pins on the front impact sensor have been reversed.

Fault symptom[s]

- The SRS indicator lamp is lit.

CROSS-CONNECTED

CHECKING COMPONENTS AND WIRING

Fig. 87: Identifying Ignition ON

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

SRS-0220: CAN SIGNAL. SIGNAL MISSING (2005-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0220

Condition

The supplemental restraint system module (SRS) checks signals on the CAN network between the supplemental restraint system module (SRS) and the central electronic module (CEM).

The diagnostic trouble code (DTC) is stored if the control module registers that there is no signal about the position of the front seats on the CAN network.

The diagnostic trouble code (DTC) can be diagnosed in ignition positions I, II and III.

Substitute Value

- None.

Possible Source

- Open-circuit in the control area network (CAN)
- Fault in the central electronic module (CEM)
- Fault in the seat position sensor.

Fault symptom[s]

- The SRS indicator lamp is lit.

SIGNAL MISSING

CHECKING COMPONENTS AND WIRING

Fig. 93: Identifying Ignition OFF

Is the diagnostic trouble code (DTC) intermittent?

- **YES**

  VERIFIED: Troubleshooting has been completed.

- **NO**

  See: **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

SRS-0224: CAN SIGNAL. CONFIGURATION FAULT (2005-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0224

Condition

The supplemental restraint system module (SRS) checks messages regarding vehicle configuration on the CAN network between the supplemental restraint system module (SRS) and the central electronic module (CEM).

The diagnostic trouble code (DTC) is stored if the control module registers a configuration fault for the switch for the passenger airbag.

The diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched on (12 V). In other words, the diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched from position 0 to positions I, II or III.

Substitute Value

- None.

Possible Source

- The supplemental restraint system module (SRS) and the central electronic module (CEM) have different configurations for the switch for the passenger airbag.

Fault symptom[s]

- The SRS indicator lamp is lit.

CONFIGURATION FAULT

CHECKING THE COMPONENT

CAUTION: Do not touch the terminal pins in the supplemental restraint system module (SRS) and the central electronic module (CEM). There is a risk of static discharge. This could damage the supplemental restraint system module (SRS) and the central electronic module (CEM).

Fig. 101: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 102: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Switch off the ignition. Wait 10 seconds
- Disconnect the connector from the supplemental restraint system module (SRS)
- Disconnect connector D from the central electronic module (CEM).

  Check the connectors for the supplemental restraint system module (SRS) and the central electronic module (CEM). Check for damage to pins and terminals in the connectors. Also check the wiring.

  Remedy as necessary.

  Check what type of crash safety equipment the central electronic module (CEM) and the supplemental restraint system module (SRS) are programmed for.

- Connect the connector for the supplemental restraint system module (SRS)
- Connect the connector for the central electronic module (CEM)
- Switch on the ignition. Wait 10 seconds
- Read off using the VCT2000 (or appropriate scan tool).

As part of the check, a comparison is performed regarding whether the control modules are programmed for the following:

- Switch for passenger airbag.

If the control modules are programmed for different types of crash safety equipment:

Check whether the crash safety equipment that does not correspond in the comparison between the control modules is installed in the vehicle.

Remedy faulty equipment and/or download new software into the incorrectly programmed control module.

Other information

- see **CONNECTING THE BREAKOUT BOX**
- For -2004, see **SIGNAL SPECIFICATION** or for model year 2005-, see **SIGNAL SPECIFICATION**

  See: **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

The fault should have been detected and remedied. As this is not the case fault-tracing has failed.

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

SRS-0225: CAN SIGNAL. CONFIGURATION FAULT (2005-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0225

Condition

The supplemental restraint system module (SRS) checks messages regarding vehicle configuration on the CAN network between the supplemental restraint system module (SRS) and the central electronic module (CEM).

The diagnostic trouble code (DTC) is stored if the control module registers a configuration fault for the occupant weight sensor (OWS).

The diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched on (12 V). In other words, the diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched from position 0 to positions I, II or III.

Substitute Value

- None.

Possible Source

- The supplemental restraint system module (SRS) and the central electronic module (CEM) have different configurations for the occupant weight sensor (OWS).

Fault symptom[s]

- The SRS indicator lamp is lit.

CONFIGURATION FAULT

CHECKING THE COMPONENT

CAUTION: Do not touch the terminal pins in the supplemental restraint system module (SRS) and the central electronic module (CEM). There is a risk of static discharge. This could damage the supplemental restraint system module (SRS) and the central electronic module (CEM).

Exit fault-tracing for this diagnostic trouble code (DTC) or make another attempt.

SRS-0228: CONTROL MODULE. PROGRAMMING ERROR (2005-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0228

Condition

Fig. 111: Identifying SRS Control Module
Courtesy of VOLVO CARS CORPORATION

The supplemental restraint system module (SRS) checks internal functions in the control module.

The diagnostic trouble code (DTC) is stored if the control module registers a programming fault.

The diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched on (12 V). In other words, the diagnostic trouble code (DTC) can only be diagnosed when the ignition is switched from position 0 to positions I, II or III.

Substitute Value

- None.

Possible Source

- Programming fault in the supplemental restraint system module (SRS)
- Incorrect control module installed in the vehicle. The control module is not intended for this model.

Fault symptom[s]

- The SRS indicator lamp is lit.

PROGRAMMING ERROR

CHECKING THE COMPONENT

Fig. 112: Identifying Ignition OFF
Courtesy of VOLVO CARS CORPORATION

Fig. 113: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Ignition off. Wait for 1 minute
- Switch on the ignition. Wait 10 seconds.

  Try to reprogram the supplemental restraint system module (SRS).

  Replace the supplemental restraint system module (SRS) if it cannot be reprogrammed.

  Other information

See: **INFORMATION**

INFORMATION

FAULT-TRACING INFORMATION

In case of this defect, troubleshooting is not followed by verification.

The information can be displayed again or the fault-tracing for this fault can be interrupted.

SRS-0230: SWITCH FOR THE PASSENGER AIRBAG. SIGNAL TOO LOW OR SIGNAL MISSING (2005-2012)

DIAGNOSTIC TROUBLE CODE (DTC) INFORMATION SRS-0230

Condition

Fig. 114: Identifying Passenger Airbag Switch
Courtesy of VOLVO CARS CORPORATION

The supplemental restraint system module (SRS) checks the signal from the switch for the passenger airbag.

The diagnostic trouble code (DTC) is stored if the control module registers that the voltage in the signal cable is

too low.

The diagnostic trouble code (DTC) can be diagnosed in ignition positions I, II and III.

Substitute Value

- None.

Possible Source

- Short-circuit to ground in the signal cable or in the connectors between the supplemental restraint system module (SRS) and the switch for the passenger airbag
- Open-circuit in the signal cable or in the connectors between the supplemental restraint system module (SRS) and the switch for the passenger airbag.

Fault symptom[s]

- The SRS indicator lamp is lit.

SIGNAL TOO LOW OR SIGNAL MISSING

CHECKING COMPONENTS AND WIRING

CAUTION: Do not touch the terminal pins in the supplemental restraint system module (SRS). There is a risk of static discharge. This could damage the supplemental restraint system module (SRS).

Courtesy of VOLVO CARS CORPORATION

Fig. 116: Disconnecting Connector
Courtesy of VOLVO CARS CORPORATION

- Switch off the ignition. Wait 10 seconds
- Disconnect the connector from the switch for the passenger airbag
- Disconnect the connector from the supplemental restraint system module (SRS).

  Check the connectors for the switch and the supplemental restraint system module (SRS). Check for damage to pins and terminals in the connectors.

  Remedy as necessary.

  Check the cable between the supplemental restraint system module (SRS) and the switch connector. Check for an open-circuit. Check for a short-circuit to ground.

Check the cable between:

- Supplemental restraint system module (SRS) terminal #45 and switch connector terminal #4
- Supplemental restraint system module (SRS) terminal #50 and switch connector terminal #5.

Remedy as necessary.

Check the power supply cables between the ignition switch and the switch. Check for an open-circuit. Check for a short-circuit to ground.

Check the cable between:

- Ignition switch connector terminal #6 (X-supply) and terminal #1 on the switch connector
- Ignition switch connector terminal #1 (15-supply) and terminal #2 on the switch connector.

Remedy as necessary.
